Although a real television pioneer, Ed Palmer now sees a big future for Super 8 film. "With more and more businesses needing the convenience of cartridges and cassettes to play back their videotape productions, and with manufacturers of video cassettes having difficulty getting on the market with their products, we may see more of industry going to kinescopes of their tapes and placing them in Super 8 cartridges. When businesses who try this method as a 'temporary' method of distributing their taped material find the many added advantages of this method, they just may never switch to video cassettes when they do arrive on the market."

Whichever way—Super 8, or videotape cartridge—the software needs of the nation's industry will skyrocket, Palmer believes. "I predict that videotape software production houses will be so plentiful in the next ten years or less that Business Screen will need a second Production Review issue each year just for independent video producers."

All about Super 8

Geo. W. Colburn was one of the first Labs to perfect the printing of the Super 8 format in both sight and sound. Over the years we have gathered much Super 8 knowledge, which we wish to share with you.

Send today for this FREE Booklet "Colburn Comments on Super 8".

IAVA: Industry a guinea pig for manufacturers?

IAVA president warns A-V men against moving into new devices too fast.

GERARD K. HALL, Director, Audio Visual Services, National Cash Register Company, and President of the Industrial Audio-Visual Association told members gathered for the semi-annual meeting in Birmingham, Alabama, October 26-29, that industry was being used as a guinea pig by some audio-visual hardware manufacturers anxious for someone to help defray the enormous costs of the development of new products for the coming estimated \$12 billion annual market for magnetic or film storage devices for the home.

"After we purchase this equipment and put it on the line, we are doing product reliability studies for them. We are doing the de-bugging for them. We are doing the experimentation that they should have been doing themselves before they ever released a product for sale," Hall said.

"Industry is a fine target for sales efforts by equipment manufacturers. Hopefully, by our companies' commitments to one system or another, we might help a manufacturer make his product the standard. There is no question," Hall said, "but that some of these new systems do offer some exciting benefits, but do they solve all our companies' communications problems? Will the new 'XYZ video cartridge cassette with continuous super 8 loop, monaural stereo sync sound, adaptable to front screen projection, and high band, no band, low band frequency modulator with optional drop-out compensator' handle all problems we might have? Humbug."

"The point is," he stressed, "we've got to beware of the non-compatibility of these systems, beware of duplicating and print problems, beware of reliability problems, and beware that we do not become gadgeteers rather than professional audio-visual communicators."

The IAVA group was welcomed to Birmingham by Mayor George G. Seibels, who said that "any city with

Sign on top of the Birmingham Trust National Bank welcomed IAVA members to the Alabama industrial metropolis, October 26.

IAVA President Gerard K. Hall, National Cash Register Company, warned members against gadgeteering with new cassette and cartridge devices.

Program Chairman Clyde D. Wood, American Cast Iron Pipe Company, welcomed IAVA members to Fall Meeting.

Dr. Robert Taylor (l) and E. J. McDevitt (r) of University of Alabama Medical Center demonstrate videotape and film teaching programs.

...yay that's got any walkin' around
...e will keep right up on audio-
...al communications." Birmingham
...es constant use of CCTV and A-V
...pment in several municipal de-
...ments, he told the IAVA com-
...nicators.

... J. McDevitt, Director of Dental
...at the University of Alabama Med-
... Center, described his department's
...anced facilities to visiting IAVA
...nbers. Despite a strong commit-
...nt to TV and constantly increased
... of TV for classroom teaching, and
... he 25-hour a week programming
... duced by the University on micro-
... e channels to the area's hospitals,
... Devitt said he was sometimes con-
... ed that nothing could beat 16mm
... as a shooting medium. "You can
... go almost any way, and do it
...," he said. "You can go to any
... of video display device, to large
... small screen 16mm projection, and
... Super 8, all of which we find very
... ul."

...ther way points on the busy sched-
... organized by Program Chairman
... de D. Wood, of American Cast
... n Pipe Company, were Birmingham
... thern College's unique theatre with
... sing, lowering and revolving stage,

tor, demonstrates unique system at
Birmingham Southern College.

Available to Business and Industry for the first time "MUSI-QUE"

A Complete record library of back- ground music and sound effects

*Ideally suited for Business
and Industrial use, such
as training films,
slide shows and other non-
theatrical presentations.*

Included are main and end titles
and various moods such as:

- Documentary • Light Comedy
- Sports • March • Outdoor
- Heavy Activity • Light Activity
- Childrens' Activity
- Scenic, etc.
- Sound Effects

The quality of this library is
unsurpassed for writing,
musicianship, performance
and the recording itself.
You will marvel at the
richness of tone and the
true high-fidelity quality
throughout.

IMPORTANT!
**PURCHASE PRICE
INCLUDES A NON-
EXCLUSIVE LICENSE TO
SYNCHRONIZE MUSIC
AND SOUND EFFECTS
WITH THE COMPANY'S
OWN PRODUCTIONS.**

It was a group therapy setting: ten racially mixed individuals together, in a small room, prepared to undergo some of the most intense encounters of their lives. Footage of the session could have immense impact and drama — assuming cinematographer Edmund Bert Gerard could get it all on film.

"I had no idea beforehand where any specific individual would be seated," writes Mr. Gerard, "so it was impossible to set my lights to accommodate the tremendous range in skin colors. I purposely kept one side of the room dark because 'nothing-is-supposed-to-happen-on-this-side' and because I wanted some silhouette effects. But suddenly all hell broke loose, and one of the group members on the dark side of the room broke down...two therapists rushed over to comfort him...and I had to pan, changing exposure as I went."

Normally the scene might have come out correctly on film, if Mr. Gerard was able to estimate his foot candles. But guesswork was unnecessary this time; his 16BL was equipped with 'APEC', the Arri Precision Exposure Control, which reads illumination through the camera's lens. "It immediately registered the change and allowed me to instantly compensate for the lower light level. Exposure was on the nose. As it developed, this scene was the most moving of the entire film."

Mr. Gerard has many favorable comments on 'APEC'. "Naturally the system is not automatic. It simply reads the scene and provides the cameraman with the most accurate reflected light measurement possible, continuously visible in the viewfinder scale; now all relevant picture information is always available to the cameraman's eye. Since 'APEC' I've been able to live dangerously with my lighting, yet the exposures are always in the mid-

dle of the printing scale. And I couldn't calculate how much time I've saved by not having to walk into the set with a handheld meter, to measure all the delicate lighting balances."

Events happen suddenly in documentary shooting, and they change without warning; 'APEC's main purpose is to keep the cinematographer on top of all this, working with a greater accuracy than he's ever known. States Mr. Gerard in conclusion, "after working with it for almost a year, I cannot understand how I was ever able to get along without it." The point is, now nobody has to.

ricia E. Moss, Special Projects Manager, Merrill, Lynch, Pierce, Fenner & Smith, receives PRSA Award from Kalman Druck, President of Harshe, Rotman & Druck, Inc., and 1972 Public Relations Society of America Chairman. Merrill Lynch's film *The Long Happy Life of John MLPFS*, was one of 13 awards presented at the PRSA Film Festival in Washington, Nov. 14.

Herbert Rosen (l) Chairman of International Films & TV Festival of New York, presenting a gold award for best film in Newsfilm category to Otto Haas, Director of Public Relations for the Olympic Games to be held in Munich. Award Ceremonies took place in New York on Oct. 22.

Mark Whalen, Modern Talking Picture Service, receives "Cindy" Award from Miss IFPA, Cathy Coffee, for the Kaiser Aluminum film, *Light, Strong and Beautiful*, distributed by his company. Award took place at Information Film Producers of America "Cindy" Awards Banquet, October 16, in San Diego.

(left to right) James G. Damon, Jr., Manager, Audiovisual Services, IBM World Trade Corporation, Sponsor, recipient of the Excellent Mention Prize of the Hazer Institut Voor Schon Kunsten, Antwerp, Belgium for the film *Of Men And Demons* in the 7th International Labor and Industrial Film Triennial; Dr. William G. Carr, President, CINE; John T. Swift, Senior Communications Specialist, IBM Corporation—Field Engineering Division, Sponsor; F. William Bryant, Jr., Producer, recipients of the Primer Premio and the Gran Premio for the film *The Real World* in the 12th International Industrial Film Festival in Barcelona; Stan Popko, Stanart Studios, Producer, recipient of the Certificate of Merit from the 25th Edinburgh International Film Festival for the IBM World Trade Corporation film, *Astronaut Coffeebreak*. Presentations were made at Cine Award Ceremonies in Washington November 12.

Award winners at International Industrial Film Festival in Barcelona, Spain, November 6. William Walton, IBM Corporation, center, holds prizes won by his company's film *The Real World*.

editorial

AWARDS CEREMONIES celebrating the outstanding films in half a dozen film festivals took place during October and November. In addition to the International Festival of Industrial Films held in Barcelona, Spain, November 2-6, and reported by Ott Coelln in his Camera Eye column, other awards were presented by the Information Film Producers of America in San Diego, October 16; the International Film & TV Festival of New York, October 22; the Columbus International Film Festival, October 21, in Columbus, Ohio; the Chicago International Film Festival November 5; The Council on International Non-theatrical events (CINE) in Washington, November 12; and the Public

Relations Society of America, November 17, also in Washington.

In all, some 765 awards were presented to non-theatrical films at these festivals, all of them worthy of note, but presenting us with a considerable problem of what to do with this mass of data. As can be imagined, the listing of 765 awards presented during a 30-day period in one issue would take on all the physical aspects of a stock market listing in the daily newspaper.

Much as we would like to see credit given for all these award winners in our pages, space limitations force us to find some other way to honor the films which have achieved special merit. We think our traditional system of listing those which have won multi-

ple awards during the year may be the best way. In the compilation on the opposite page we have listed all films which have attained three or more major awards in 12 of the most prestigious festivals held throughout the country during 1971. (New York awards, postponed from December 1971 to February 1972, were necessarily omitted from our compilation.) Wherever possible, we have noted major credits on the film for producer, director, writer, camera, editor, and music.

We salute these "Most Honored Films" and the people who sponsored and produced them.

648 Awards Used in "Most Honored" Compilation.

SUNSET MAGAZINE TRAVEL FILM FESTIVAL: 1 Grand Prize Trophy, 5 Major Category Awards, 11 Honor Awards, 30 Certificates of Excellence. Total of 47 Awards. (17 Grand, Major Category and Honor Awards used in Business Screen "Most Honored" compilation.)

Quinn

WONDERING ABOUT THINGS

Winner at: Chicago, Columbus,
U.S.

Sponsor: The Lawrence Hall
Science, Univ. of California,
in association with Dow-
Corning Corp.
Production: Wexler Film
Productions
Producer: Sy Wexler
Director-Writer-Editor: Larry
Yust
Camera: Isidore Mankosky
Music: John Brasher
Animation: Frank Armitage

Take this 30-second

photoquiz

Don't feel bad if you fail* because you'll win a
CFI Film Footage Estimator.

1. How much will it cost me to have a 23 minute 16mm Eastman color release print made if the laboratory charges 7¢/foot?
2. How many 35mm feet would I have if I blew up my 23-minute 16mm picture?
3. What about reducing my 23-minute 16mm film to Super 8mm—how long would that be in Super 8mm?
4. How much ECO can I have developed for \$250 at 6¢/foot?

***We'll even send you one if you don't fail**

Undoubtedly you could answer these questions. They're not really hard. But you probably couldn't do it in 30 seconds—you'd need a little more time, and perhaps even a pencil and paper.

That's why we're making our Film Footage Estimator available free to interested professionals in the motion picture and audio-visual industries.

It's handy. It has all the information you need built right into its easy-to-read sliding scales. Answering the above questions in 30 seconds would be a cinch if you had one. And it's especially valuable for budgeting and planning.

How do you get a CFI Film Footage Estimator? Simple. Just send in the coupon on this page or write to us on your letterhead. We'll send you one with our compliments, along with any special service information you may need.

All right, send me a Film/Footage Estimator. Let me prove to myself that I can answer those questions in 30 seconds.

1972 FILM FESTIVAL PLANNING GUIDE

A listing of film festivals and competitions
of particular interest to industrial film sponsors and producers

SUNSET MAGAZINE TRAVEL FILM FESTIVAL

Sponsored by: Sunset Magazine and H. Werner Buch Enterprises.

Dates: Jan. 6-16, 1972 (Anaheim); April 7-16, 1972 (Los Angeles).

Location: Anaheim Convention Center, Anaheim, Calif.; Los Angeles Convention—Exhibition Center, Los Angeles, Calif.

Deadline for Entries: Jan. 1, 1972.

Eligibility: Films must be produced or released after January 1, 1970.

Categories: Government produced film featuring travel within U.S.; Government produced film featuring foreign destination; Commercially produced film featuring travel within U.S.; Commercially produced featuring foreign travel; any entry featuring sports or outdoor recreation; any entry featuring travel or vacations using recreational vehicles.

Entry Fees: \$25.00 total fee for single or multiple entries.

Judging: By international panel of qualified jurors.

Awards: Sunset Magazine Grand Prize Award (\$500.00 plus trophy), and five additional category awards (\$100.00 each).

Get Further Information From: Robert N. Jordan, Festival Director, 1665 West Katella, Anaheim, California 92802.

NVCA DAYS OF VISUALS AWARDS

Sponsored by: National Visual Communications Association

Dates: February 10, 1972

Location: New York Hilton Hotel, New York

Deadline for Entries: January 1, 1972

Eligibility: No restrictions announced
Categories: Several categories for industrial films

Entry Fees: \$35 for members, \$50 for non-members.

Judging: By a qualified panel of jurors

Awards: NVCA Awards in each category
Get Further Information From: Quent Harvell, NVCA, Suite 1236-A, 230 Park Ave., New York, N.Y. 10017 Phone: (212) 686-4704

U.S. INDUSTRIAL FILM FESTIVAL

Dates: April 26, 27, 1971

Location: Palmer House, Chicago

Deadline for Entries: March 1, 1972

Eligibility: 16mm motion pictures and 35mm filmstrips produced for industry associations, government and educational institutions between March 1, 1971 and March 1, 1972

Categories: Commercially-produced, government-produced, in-plant-produced, and university produced films in 29 subject categories each.

Entry Fees: \$50.00 for motion pictures; \$30.00 for filmstrips.

Judging: On a point basis, considering such factors as effectiveness, audience motivation, clarity, photography and sound.

Awards: Gold Camera Awards in each category. Certificates of excellence. Special awards.

Get Further Information From: J. W. Anderson, U.S. Industrial Film Festival, Suite 825, 39 South LaSalle St., Chicago, Ill. 60603.

14TH ANNUAL AMERICAN FILM FESTIVAL

Sponsored by: The Educational Film Library Association.

Dates: May 9-13, 1972.

Location: New York Hilton Hotel, New York.

Deadline for Entries: January 15, 1972.

Eligibility: 16mm films produced in the calendar year 1971.

Categories: 33 major areas of education, art, culture, religion, ethics, business, industry, health and medicine.

Entry Fees: \$30.00 to \$75.00

Judging: Films are pre-screened by a qualified panel of jurors in each category and finalists are judged again in public screenings at the Festival

Awards: Blue Ribbon Trophy for First Place in each category, and Red Ribbon Award for Second Place. Also a grand prize, the "Emily" Award.

Get Further Information From: Educational Film Library Association, 17 West 60th St., New York, N.Y. 10023 Phone: (212) 246-4533.

FIFTH ANNUAL ATLANTA INTERNATIONAL FILM FESTIVAL

Sponsored by: "Forward Atlanta" (the Atlanta Chamber of Commerce), the Atlanta Art Alliance, Interfilm

Dates: June 16-25, 1972

Location: Atlanta Memorial Arts Center, Symphony Hall, Galleria and Hill Auditorium

Deadline for entries: April 15, 1972

Eligibility: Any motion picture 16mm 35mm, 65mm, or 70mm, produced 1971 or 1972, of any length or type

Categories: Five major divisions 1 competition: features, short subject documentaries, television commercials and experimental films. There are several sub-categories of competition within these major areas.

Categories: Three groups: Institutionally-Produced, Commercially-Produced, and Government-Produced, with 9 categories in each group.

Entry Fees: \$25.00 for members, \$40 for non-members.

Judging: Judging in preliminaries by panels of film makers and other qualified jurors, in cities of chapter locations. Blue Ribbon panel in Los Angeles selects award winners from those top rated films from preliminary screenings, in special judging. Panelists screened and selected by Film Competition Chairman.

Awards: "Gold Cindy" for First Place and "Silver Cindy" for Second Place in each category.

Get Further Information From: Film Competition Chairman, Information Film Producers of America, P.O. Box 70, Hollywood, California 90028. Phone (213) 465-4898.

11th ANNUAL COLUMBUS FILM FESTIVAL

Sponsored by: Film Council of Greater Columbus in association with Columbus Area Chamber of Commerce.

Dates: Oct. 26, 1972

Location: Columbus Athletic Club, Columbus, Ohio.

Deadline for Entries: August 1, 1972

Eligibility: Films produced 1970 to date, regardless of length

Categories: Business & Industry, Health, Mental Health, Travel, Education, Social Studies, Graphic & Cultural Arts Motion Pictures and Filmstrips

Entry Fees: 16mm films up to 44 min. \$35.00; 45 to 90 min, \$40.00; over 90 min. \$50.00. Single filmstrips \$10.00, sets up to six, \$20.00.

Judging: By panels of qualified jurors in each category.

Awards: "Chris" statuette for top award in each category, "Chris" certificates for runner-ups in each category. "The Silver Chris" for most unique film entered.

Get Further Information From: Miss Mary A. Rupe, Secretary, Film Council of Greater Columbus, 83 S. High Street, Room 408, Columbus, Ohio 43215.

29th ANNUAL SAFETY FILM CONTEST

Sponsored by: The National Committee on Films for Safety.

Dates: October 30, 1972, during National Safety Congress.

Location: Conrad Hilton Hotel, Chicago.

Deadline for Entries: February 15, 1972.

Eligibility: 16mm motion pictures on safety or accident and prevention produced or released during 1971.

Categories: Occupational, Home, Traffic and Transportation, Recreational and Sports, General. Television and Theatrical subjects, TV shorts and spots are judged separately.

Entry Fees: None. Shipping instructions, labels and transportation costs are pre-arranged by entrant.

Judging: By representatives of 25 co-sponsored national service organizations and professionals in all fields of safety. Preliminary screening in mid-March in Chicago. Final judging in mid-April in Washington. Winners are notified after judging.

Awards: Bronze plaques are awarded to top winners in each category. Awards of Merit are given to other films for special reasons of subject treatment, subject excellence and/or unusual contribution to safety. One plaque-winning film is designated "Safety Film of the Year."

Get Further Information From: Wm. E. Wentland, Secretary, National Committee on Films for Safety, 425 N. Michigan Ave., Chicago, Ill. 60611 Phone (312) 527-4800.

8th ANNUAL CHICAGO INTERNATIONAL FILM FESTIVAL

Dates: November 3 to 23, 1972

Location: Carnegie Theatre, Chicago.

Deadline for Entries: September 15, 1972.

Eligibility: 16mm and 35mm films produced in 1971 and 1972, optical sound.

Categories: Features, Short Theatricals, Student Films, Industrials, Educational Films, TV Films, TV Commercials. Industrials in 8 categories.

Entry Fees: Varying with category and length.

Judging: Qualified panels of judges in each category. Public screening of all winners during Festival.

Awards: Gold and Silver Hugo awards in each category.

Get Further Information From: Michael J. Kutza, Jr., The Chicago International Film Festival, 12 East Grand Avenue, Room 301, Chicago, Ill. 60611 Phone (312) 644-3400.

CINE GOLDEN EAGLE AWARDS

Sponsored by: Council of International Nontheatrical Events.

Dates: November 9-12, 1972.

Location: Washington, D.C.

Deadline for Entries: (1) February 1, 1972, (2) August 15, 1972.

Eligibility: 16mm or 35mm motion pictures with optical sound. Owned by American Citizen.

Categories: Agriculture, Arts & Crafts, Business & Industry, Education, Entertainment/Experimental, Environment, Culture, History, Maritime, Medical, Music, Public Health, Religion/Social & Human Relations, Science, Documentary & 35mm, Sports, Travel, U.S. Government, Amateur (Adult, Student and Youth).

Entry Fees: Professional films over 30 minutes, \$50.00; Professional films from 15 to 30 minutes, \$40.00; Professional films up to 15 minute, \$30.00 Amateur and Student films, \$15.00.

Judging: By 30 regional juries of qualified experts and by final juries in Washington.

Awards: Golden Eagle Certificates for films chosen to represent the United States in overseas film festivals.

Get Further Information From: Mrs. Anita S. Price, CINE, 1201 16th St. N.W., Washington, D.C. 20036. Phone: (202) 265-1136.

4th ANNUAL PRSA FILM FESTIVAL

Sponsored by: Public Relations Society of America.

Dates: November 12, 1972.

Location: Detroit, Michigan.

Deadline for Entries: September 20, 1972 (Entry forms deadline is September 1, 1972).

Eligibility: Entries are limited to those films sponsored by companies and/or organizations represented in the membership of PRSA, and must have been produced or released between September 15, 1971 and September 15, 1972.

Categories: 15 subject categories.

Entry Fees: \$50.00 per film

Judging: By a panel of public relations executives and film experts; judging based upon how well film meets public relations objectives as well as technical excellence.

Awards: PRSA Film Festival Award (plaque)—winner for each category.

Get Further Information From: Mrs. Rea Smith, PRSA Film Festival, Public Relations Society of America, 845 Third Avenue, New York, N.Y. 10022. Phone: (212) 751-1940.

You do everything you can to make a film right.

Hugh Zielske sells appliances. He has a hot new one for the kitchen. You made a film for in-store demonstration. But Hugh won't use the film without a fool-proof projection system. Like the Technicolor 610. It features no thread/no wind continuous loop cartridges. Hugh inserts one; turns a switch; and does his own voice-over while the film shows itself. Most important, he gets utter simplicity. Complete reliability. He can leave the film playing and tend to other customers. He can even let customers play it themselves.

Charlie Bungert has to learn to fry burgers for a franchise operation. Your sound and color film can teach him how. If he has the Technicolor 1000 Projector to go with it. Charlie couldn't run a conventional projector. And he wouldn't take the time. But anybody can run the 1000. Charlie simply inserts the cartridge. And plays your film. Until he becomes a burger master.

Now make sure it's shown.

Norm Brown has a film that demonstrates heavy construction equipment. It brings giant earth movers and rock crushers right into a prospect's office. Norm uses the film. Because his Technicolor 1300 Projector makes it easy. He wouldn't drag around conventional reel-to-reel equipment. Or keep a customer waiting while he sets it up. But this one, he wouldn't be without.

Irene Hook is an assembly line worker. You made a three-minute silent film that shows her how to insert flange A1 around amplex B and into groove C without breaking the XYZ circuit. If Irene has the Technicolor 820 Projector, all she has to do is insert cartridge A into Slot B and push button C. Irene can do it herself, right on the production line.

We think any business or instructional film is better off in a Technicolor cartridge. Let us send you a brochure with all the details.

Simple Smooth Silent

The J-4 "Joy Stick" Zoom Control

You'll find no jerks, bumps, or noise in the J-4 "Joy Stick"! The most critical professionals in Hollywood have tested, and accepted it as the standard in zoom controls. High reliability combined with easy, uncomplicated operation sets it apart and ahead of anything available.

Smooth? A true servo feedback system, provides constant speed through full zoom over a wide speed range (1½ sec-4½ min).

Exclusive Joy Stick control gives gradual start/stop to and from preset maximum.

Simple? Complete control under your thumb . . . You set the rate and your thumb does the rest! The fully self-contained, compact control box, has a built-in rechargeable battery.

You get what you want, when you want it, the way you want it — simply, smoothly, silently!

Brackets and gears are available to fit all zoom lenses and all 16mm and 35mm cameras.

Ed Di Giulio Says:

Zoom controls have always been a pain-in-the-neck! It's almost impossible to design one that satisfies everybody. We know — we've gone through four complete redesigns over the past three years in perfecting the Model J-4. Its success is attested to in its use by Hollywood's professional cinematographers to the virtual exclusion of all other types.

But the real surprise is that a zoom control as sophisticated as the J-4 "Joy Stick" has been accepted by 16mm cameramen as well!

REVIEWS AND PREVIEWS OF NEW VISUALS

At 2 PM Precisely

One of these days tennis will be as important a film and TV spectacle in the world of sports viewing as golf has become. Wilkinson Sword thinks so. The international razor blade manufacturer has entered into what it hopes will be a "long and fruitful collaboration" with the Wimbledon tennis tournament in England, with Rod Laver, who well may be the greatest player of all time, and with other tennis events now developing in the U.S.

Soon to be seen throughout the country will be one of Wilkinson's initial ventures into the world of tennis, a film, *At 2 PM Precisely* which captures the great moments of the 1971 Wimbledon event.

Seen at New York premiere of "At 2 PM Precisely" are F. William Kreeck, VP & General Manager, Wilkinson Sword; Les Weiland, AE, Modern Talking Picture Service; and Rod Laver, international tennis star and Wilkinson spokesman.

Rod Laver is now appearing at previews of the film for press audiences. His booklet, *Tips on Tennis*, will be presented to all non-theatrical audiences, as well as samples of Wilkinson's bonded razor.

Next summer, Modern Talking Picture Service, which is distributing the film nationally, will circulate it to over 1800 resorts, where it will be screened as part of the regularly scheduled evening activities. Other key distribution outlets will be to tennis clubs, community groups, high schools, colleges and television stations.

At 2 PM Precisely was produced by Trans World International.

Multi-Media Package for Public Distribution

The first public distribution of a multi-media, three screen audio-visual program package is being undertaken for the feature, *Of Lemmings and Kings*, by Spindler & Sauppe, Inc. The program integrates seven minutes of 16mm color motion picture film, approximately 300 35mm color slides and a pre-programmed audio tape into a powerful 22-minute message on drug abuse aimed at teenage and young adult audiences. It was written, directed and produced by Wilson Brydson for Steelcase, Inc., of Grand Rapids, Michigan.

As a public service, Spindler & Sauppe is making the program available through its nationwide dealers for \$150. The production has received wide commendation from schools and public service organizations.

Problems of the Spanish-speaking Americans

Voice of La Raza is an in-depth look at the problems which confront Mexican-Americans and Puerto Ricans in securing equal job opportunities with other Americans. It was produced for the Equal Employment Opportunity Commission by William Greaves Productions, Inc. EEOC is the federal agency concerned with combatting job discrimination against minority groups and women.

Anthony Quinn, who freely donated his services, is featured prominently in the production. The film grows out of conversations and question asked by Quinn in his travels across the country concerning the plight of Spanish-speaking Americans.

Voice of La Raza was produced and directed by William Greaves, who also wrote the script in collaboration with Jose Garcia.

MORE THAN A FILM

Almost any film in nontheatrical distribution can be enhanced by supplemental material. Here's how to do it.

BY PHILIP MURPHY

WILKINSON SWORD IS DOING IT with a new film about Wimbledon tennis. International Nickel is doing it with a new little drama about a boy and girl on the threshold of marriage. Armour-Dial has done it for years. Union Carbide does it with sponsored films just as it did with network television.

Chevrolet does it. So do Project Head Start, Eli Lilly and Knox Gelatin. Also the American College of Surgeons, Jack Daniel, Black and Veatch and Armco Steel. And many more.

What they're doing is providing for sponsored film audiences with more than just a half hour or so of celluloid. They're providing them with a program by supplementing their films with teacher's guides, audience education literature, wall charts, product samples and other materials.

This means extra value for the audience, of course, but the big win should be the sponsor himself. He gets many benefits from this kind of program, and the cost is quite modest.

Although many sponsors are providing supplementary materials with their films the practice is still the exception rather than the rule. Neither producers nor distributors have done a great deal to develop the opportunity. Perhaps they have considered the profit potential too small. And producers, in their extremely competitive market, may shudder at the thought of complicating their sales job, while distributors have preferred to concentrate their efforts on getting films to the widest possible audience.

But there is likely to be increasing awareness of the fact that almost any film in nontheatrical circulation can be enhanced by some kind of supplementary material. We see more and more examples around us. Educational films are almost invariably accom-

panied by teacher's guides. These films must do a real job for the teacher or die, since schools lay out money for them. Knowledgeable film sponsors and merchandisers like Armour-Dial and Prudential Insurance, Wilkinson Sword and International Nickel are setting examples still closer to home, often imaginative and well publicized.

Another strong influence is the playback from audiences. When Modern Talking Picture Service surveyed home economics teachers across the country last year, we asked them whether they actually used the teacher's guides that were provided with some films. The response was 96% positive. 48% said they always did, and 48% said they usually did. We asked also if they would like to receive teacher's guides, or other literature, with more films, and 91% said yes. There is little doubt that we will find similar response as we survey other curriculum areas. Way back in 1955 we commissioned an extensive study of sponsored film utilization in United States high schools, and at that time 91% of the school administrators and film coordinators who responded said they considered teacher's guides important.

It might be in order now, I think, for some film festival to present a special award for outstanding supplementary materials. That would further publicize their value and popularity.

Let's look at some of the advantages to the sponsor of supplementary materials.

First, they can influence audiences to ask for a film. Distributors have been remarkably successful in finding more and more audiences for films, but with so many films being made the sponsor should realize that he does face competition for audience time. This is especially pertinent when the

sponsor want to reach certain types of audiences that are relatively hard to get, such as women's clubs or even service clubs.

Many community groups today are looking for programs of some substance—projects they can get involved in. As we can read in the newspapers, an extraordinary number of groups are being formed to pursue specific action programs: environmental protection, urban renewal, women's rights. The traditional groups are also putting a lot of attention into action programs, such as Kiwanis International with its Operation Drug Alert.

Wall posters—American Compressed Air & Gas Institute and the Chocolate Information Council shown here—are valuable adjuncts to films going to schools.

Even if they're just meeting for fun they're more likely to heed your offer of a program that offers a party booklet or a product sample or a button or something for every member of the group—and some tips for the chairman on how to run the show.

The same reasoning holds in schools. They use lots of films, but

Philip Murphy is Public Relations Manager of Modern Talking Picture Service, a leading film distributor.

what they're really looking for is learning experiences rather than time-fillers. They want programs that will get the student involved so he begins to ask and discover for himself. Contemporary films are particularly well suited to start this process. They are stimulating to the young audience, involving, revealing. But not "instructional" in the old sense. Some teachers may need help in using these films to best advantage. A good example is a film sponsored by The Royal Worcester Porcelain Company, *The Partridge Tureen*. It has no dialogue, no narration, no how-to-do-it demonstrations. But it is a delightful film, clearly designed for young people, and through mood and visual impressions it not only hooks its audience but imparts implicit teaching. The teacher's guide explains the nature of the film, points out several concepts that underlie the story line and indicates the areas of the curriculum in which it could be used. It suggests classroom activities and subjects for discussion related to the film, and provides a bibliography for further reading.

Royal Worcester goes further, providing each teacher with 50 copies of a student manual entitled "Setting Your Table—Your Guide to Fine China."

This kind of material does more

than attract bookings, of course. It means that the film will probably be given much closer attention. It may generate follow-up activities. It may send teacher or students looking for further information, perhaps from the sponsor himself, or his field offices or stores. The literature may enjoy continuing exposure, particularly if it is designed for wall display, like a chart or poster. And it may be carried home or to other group meetings (can indeed be designed to bring that about).

Frequently the literature directs the interest won by the film into more commercial channels. A common example is the recipe booklet. The Pineapple Growers Association sends a supply with the film *10001 Pineapples*, the National Broiler Council does with *Chicken American Style* and so does Knox Gelatine with *R. S. V. P.* There are many more.

Another useful function of literature is to adapt a film to a particular audience or purpose—and surely this could be done more extensively. A general corporate profile film, for example, could, with the right literature, be used as a recruiting tool. It could be coordinated with various areas of the school curriculum. It could be regionalized. It could be updated.

Although literature is frequently created for films, sponsors often use

Audience folders are good reminders of key points in the film, generate follow-up activities.

materials that are already available. Black and Decker accompanies film *Playing It Safe With Power Tools* with reprints from *Popular Science* magazine. The German Federal Republic sent a map of Berlin with film *Berlin's a Hit*. The Chocolate Manufacturers Association, with film *Exploring the World of Chocolate*, supplied two generalized industry pieces—a four-color 32-page booklet called "The Story of Chocolate" and supply of folders called "America's Favorite Flavor."

Teacher's or discussion leader's guides and handout booklets or folders for the audience are not the only kind of supplementary materials, of course. When we surveyed the home economics teachers, we asked them about various kinds of materials, some of which we made up just to see what they'd say. Teacher's guides and handout literature did indeed finish first and second, but every item we asked about scored well. Product samples rated third. Wall charts or posters tied for fourth with one of our "made up" items, tests. Next came another made up item, games. And last—but with a 31% favorable response—was student prints, an idea borrowed from the educational film field. (What student prints amount to is still pictures, perhaps scenes from the movie—a good key for review discussion.) Those are just a few of the possibilities. It would be possible to think of many more.

Some of the programs are rather elaborate. The home economics teachers and home demonstration agents who book *International Nickel's film Yesterday Has Gone Away* receive a color filmstrip (or slides, if they prefer) with accompanying narration and a record; printed script of the filmstrip; supplies of two booklets; a comprehensive teacher's guide for the use of these materials.

OXBERRY'S NEW LIQUID GATE

NOW you can pull out a dry gate.....

Complete System: \$8,700.00
for OXBERRY Equipment
FOB - NYC - Uninsured

Available for ACME & RESEARCH PRODS

AND plug in a liquid gate.

- ✓ TWO SWITCHES
- ✓ TWO REGULATORS

A self contained, normal loading, unit that's ready to go in minutes. Virtually eliminates scratches and passes splices easily without causing bubbles, liquid spillage, streaks or turbulence, at freeze frame, normal speed and up to 600 f.p.m., with a pin registration system.

The system's liquid is maintained at approx. two pounds pressure by a pump and regulator, bypassing all excess pressure back to the reservoir, which contains a regulated bubble trap. The vacuum pump maintains approx. five inches of mercury vacuum, which returns all fluid to the reservoir. With a constant flow of filtered fluid the film is totally immersed and eliminates scratches and dirt. The two thick optically flat glass windows minimize the effect of dust and dirt on its outer surface, and is specially coated to maximize light passage. The film is held at your normal focus plane for follow focus.

Changing the Army's Image

by Robert G. Ervin

Editor Bob Ervin discusses editing of Army "Green Scene" segments with Editor [Name obscured] Pierce.

INSIDE A MOD LOOKING COFFEE HOUSE, a black soldier waits for a director's cue and then very candidly accuses the Army of being a white man's establishment, run by and for whites!

On the campus of Ohio State University, a camera zooms into a closeup of a long haired college student who expresses his anti-ROTC attitude and that it has no place within an academic environment.

The pros and cons of how an All Volunteer Army would relate to our citizen-soldier heritage fall into place during a probing self examination.

Solarized images flash on and off the screen as Army activities are seen in a split screen effect and an up and down arrangement of *The Army Goes Rolling Along* reaches a crescendo to support the film's main title, *THE GREEN SCENE!*

These cinematic touches all have something in common. They reflect a new thrust and image in Army films. Telling it like it is has replaced telling like the man thinks it is! The French, British and Italians had their "new wave" film trends in the Sixties. The United States Army has embarked on its own in the Seventies.

Despite the shock waves which followed the CBS telecasts of *The Selling of the Pentagon*, Army film production is very much alive and sporting a new look to mirror its changing image. "The Army Wants To Join You" is more than just an advertising agency's new recruiting approach. It expresses the essence of an Army-wide campaign to regain eroding public confidence and re-establish internal communication.

Ironically it's the Vietnam war which has made the Army itself a major casualty. The Army's institutional image . . . command authority . . . and credibility have been seriously tarnished. To undo that damage a lot of traditional, business-as-usual procedures have disappeared during the last few years.

Robert G. Ervin has been associated with Army film production for sixteen years as a producer, director and writer. For five years, 1957 to 1962, he was one of the civilian producers at the Army Pictorial Center who produced *The Big Picture* series for the Army's Chief of Information. He has also written, directed and produced films for the Army Material Command.

He is now a free lance writer and production co-ordinator for clients which include: the Army . . . IBM Corporation . . . Eastman Kodak . . . American Can Company . . . Price Waterhouse . . . General Electric . . . and several New York City film production houses. He is a communication arts graduate of Michigan State University.

. . . and the prevailing caution is "Don't put the troops to sleep."

Among the victims of change was the Army Pictorial Center, the Army's centralized motion picture production facility situated in Long Island City, New York. In June 1970, APC expired after 28 years of Army ownership and operation spanning World War Two . . . Korea . . . and Vietnam. APC represented too much of the past and not enough today and tomorrow. It had become a white elephant, steeped in administrative red tape and often at war with itself. Change had collided with tradition, and when the battle lines were finally drawn the voices urging change prevailed.

Presently, Army film making is a greatly decentralized operation. Under the jurisdictional guidance of The Army Material Command in Washington, D.C., the mechanics of production involve three geographical areas: the Army Missile Command at Redstone Arsenal in Alabama . . . Aberdeen Proving Ground in Maryland . . . and White Sands Missile Range in New Mexico.

It is the Missile Command which has become a mini-APC and handles

"Sugar coating and sermonizing just won't work any more"

the largest portion of the Army's film program. Mated to this AMC activity is a Government-Owned-Contractor Operated Facility (GOCO). During 1971, the General Electric Company was awarded the prime contract to provide motion picture production services to the Army's own staff of motion picture production specialists, many of whom are former APC employees. Through GE as the prime contractor, writers . . . directors . . . and even film producing houses have been contracted to provide their respective talents in film production.

The kinds of films needed to train, inform and motivate today's soldier originate with various Army agencies (clients in industrial-commercial parlance) agencies like the Continental Army Command (CONARC) which establishes an annual training film program. Once the specific training film subjects are established, CONARC and AMC work together to convert titles into scripts and scripts into films. And even the look in training films is new and the prevailing caution is: "Don't put the troops to sleep!"

Another lion-sized film user is the Army's Chief of Information

(CINFO). Here again, informing the soldier has become a different ball game. Credibility has the immediate priority. Sugar coating and sermonizing just won't work any more. Film subjects for CINFO's *The Big Picture* and the new *Green Scene* series have become more topical and less historical. The finished product must be able to compete with television and entertainment films to which younger soldiers relate. Melodramatic portrayals may still work well for the TV "soaps" but not for Army information films.

Yet another "with it" group who are using films to effectively reach the individual soldier is the Army's Corps of Chaplains. Drug abuse . . . racial and religious tolerance . . . character guidance . . . social adjustments in Army and civilian life are the kind of subjects which Army Chaplains include in their film program. And controversy is not avoided in favor of piety. Chaplain films develop an empathy which relates to young men and women who challenge the Army and society far more critically than ever before. "Tell it like it is" is still the name of the game.

The revolution of sorts taking place within the Army establishment has greatly contributed to the changing look in films now bearing the Department of Army Seal. The Army wants to be shown in roles and activities relevant to today's problems. It wants its people and the general public to know that the Army cares about ecology . . . domestic problems . . . social polarization . . . as well as its continuing role in national defense. So Army films have become exciting and challenging and they reflect a new vitality. The heavy handed, hard sell approach has given way to the use of split screen techniques . . . more interesting cinematography . . . less talk and more action . . . music with a new sound. All this may be upsetting to some of the older Army breed but it's in step with the younger generation upon whom the Army knows it must rely.

Yes . . . Army films have changed. Making them has changed. The people who use and make them have changed. But most of all, the soldier who sees them has changed. And because I see that, Army films are now "telling it like it is" . . . and that's a step in the right direction for everyone!

"YOUR HERITAGE"

FEATURING NEW EQUIPMENT AND SERVICE

Editing Equipment

FILMKRAFT MFG. CO. is now marketing two new models, 16M3 and 16OM, of synchronous editors permitting mixing of one to three magnetic tracks with 16mm picture. Can be used with standard benches and rewinds. Foot-switch operated. Zeiss Moviescop viewer.

Solid state amplifier, speaker and 4-channel mixer. Picture and tracks may be edited and checked simultaneously without losing sync. Prices start at \$1385, 6850 Lexington Ave., Suite 217, Hollywood, Calif. 90038.

Multi Media Programmers

HAMTON ENGINEERING ASSO. has added a program simulator to its line of A-V systems. Simulator verifies sequence of slides in projectors prior to punching the command information on paper tape. Handles 8 separate projectors. Permits instant error correction. 735 Providence Highway, Norwood, Mass. 02062.

Camera Accessory

CINEMA PRODUCTS has announced a new compact crystal controlled motor for the Arri 35mm camera. Electronics contained in motor housing. Out-of-sync "Sonalert" signal. Plus or minus 15 parts per million accuracy. Accessories permit operation in Arri blimp. Also footage counter. 2044 Cotner Avenue, Los Angeles, Calif. 90025.

CREATIVE COMMUNICATIONS GROUP now offer a digital automator, the Multimator, for controlling up to 10 multi-media functions on one channel of audio tape. "Instant replay." Reaction time 2 milliseconds. Permits fast "wipe" effects. Remote control. 123 Auditorium Circle, San Antonio, Tex. 78205.

SPINDLER & SAUPPE has introduced a low-cost accessory, the Tri-Cut, which permits quick cuts and animation effects in three-screen slide presentations. "Alternate" button permits 2-step animation effects by allowing projection lamps to "Flop" back and forth. Price is \$594. 13054 Saticoy St., North Hollywood, Calif. 91605.

Music

DE WOLFF MUSIC LIBRARY has added ten new hours of modern sounds on disc and quarter-inch tape to its library of music for films. A 500-page classified catalog is available. 25 West 45th St., New York, N.Y. 10036.

Videotape Recorder

PANASONIC has announced a new half-inch VTR, the NV-3150, in EIAJ b/w and color standards. Electronic capstan servo editing, slow motion, stop action. Roll free editing. Two track audio. Remote control. 200 Park Ave., New York, N.Y. 10017.

Microphone Accessory

SHURE BROTHERS has announced a new microphone isolation mount, A55M, to effectively control mechanical noise. Said to be ideal for boom operation in studios. Price is \$25. 222 Hartrey Ave., Evanston, Ill. 60204.

Reels and Shipping Cases

PLASTIC REEL CORP. OF AMERICA has announced new shipping and storage cases which hold 3 or 6 400 ft. 16mm reels, eliminating the need for heavy

metal cases. Four colors, positive action locking. 640 South Commercial Avenue, Carlstadt, N.J. 07072.

Lens Accessory

CINE 60 INC. has designed an improved Arri "C" lens mount which permits the use of Arri lenses on "C" mount cameras. Precision locking. \$75. 630 Ninth Ave., New York, N.Y. 10036.

Synchronizers

LA BELLE INDUSTRIES has introduced the Pla-Matic 83-B, a new model sight/sound synchronizer for use in slide and filmstrip presentation. It accommodates a slip-in sound cartridge which permits easier loading and changing. Any remote-controlled projector or other switch-operated device can be controlled. 40 minutes of continuous audio at 3 1/2 i.p.s. with automatic stop at the end. 510 S. Worthington St., Oconomowoc, Wis. 53066.

Lenses

ARRIFLEX COMPANY has introduced a new 9.5-57mm Fl. 6-T1.9 Angenic zoom lens for Arriflex 16mm. Available in either standard Arri or Heavy Duty

Bayonet Lock Mount. Focusses to 2 True wide angle. Box 1050, Woodstock, N.Y. 11777.

Lab Equipment

IREISE ENGINEERING is offering complete new line of squeegees for processors. Included are Ott air squeegee for high speed, box and vacuum for moderate speed and low noise. Knife wiper squeegees halt chemical carry-over. 1941 First St., San Fernando, Ca 91340.

Animation Stand

ONBERRY CORP. has introduced new low-cost animation stand for Super 8 production. The Animator 8 incorporates professional features found

16/35 stands with special provision for filmography techniques. Pin registration guide. Pantograph reference. Camera available as accessory. Basic unit only is \$595. 516 Timpson Place, Brooklyn, N.Y. 10455.

Upgrade Your JAN 16mm Projector

New accessories provide easy, simple modifications for quieter running and editing capability.

If it's your
pièce de
résistance,
shouldn't it arrive
in one pièce?

Chances are you invest a lot of time, money and talent in a film or tape. You produce a masterpiece, then entrust it to less-than-rugged reels, cans, cases.

It doesn't make a whole lot of sense. Especially when we produce a whole line of Plio-Magic film (and tape) handling equipment. It's rugged, lightweight and inexpensive.

You can choose from a complete line of reels. For 16mm, 8mm, Super 8, 35mm, microfilm, 1/4" tape and video tape.

You can choose from a complete line of cans. (To hold all our reels as well as storage boxes for Technicolor-type film cartridges.)

You can choose from a complete line of cases. For films. For filmstrips. Even for Fairchild-type film cartridges.

And, lastly, you can choose from the rest of our line. From our film cores (8mm to 105mm), from our Reel-Pak (self-enclosing reels), 8mm to 35mm, from our idler/drive rollers (8mm to 70mm), and from our linear polyethylene ball-bearings, with ground glass balls.

Send for our catalog. It could just keep you from going to pieces.

Plastic Reel Corporation of America, 640 So. Commercial Ave., Carlstadt, N.J. 07072.

PLIO-MAGIC®

Someday, you'll wind up with plastic.

Your Next Slidefilm - Beaut - or Bomb?

Here's a quick test to find out:

NARRATION TEST:

1. **Brevity.** No more than 15 words per slide. More words slow things down. If you can't cut the words in a particular case, add a slide or two.
2. **Rhythm.** Slides should have varying amounts of narration. The same length of narration is monotonous.

3. **Silent Frames.** Skip the words when the picture tells the story. Fill in with music. Remember, this is a visual medium.

4. **Active voice.** ("The batter hit the ball," not "the ball was hit by the batter"). Insist on this.

5. **Simple words.** Look with suspicion on words with four or more syllables.

6. **Hearing Test.** Record narration at 3 1/2 wpm, play back at 7 1/2 wpm. This will provide a new perspective on the sound—like an artist viewing a painting through a reducing glass. Check rhythm, word length, etc.

PICTURE CHECK:

1. **Slide-Script Match.** Without reference to the script, list, for each slide, what the picture principally says visually. Check visual content against narrative statement in each case. Change pic or narration to obtain match. Where a picture can't be made to fit a particular piece of narration, use art.

2. **Organization.** Mark all slides dealing with the same subject, with the same color signal dot. Set up slides so you can see them all at the same time. If the same color appears, then appears again in presentation, you are harking back to a subject after you have finished it. Improve the organization of presentation.

3. **Number of Slides.** A maximum of 15 words per slide yields 10 seconds per slide. Time your narration in seconds, by reading it aloud (silent reading), divide by number of slides. Add slides if necessary. A minute show should have at least 6 slides.

4. **Variety.** Mark all long shots, medium shots, all close ups with distinctively-colored signal dot. Exclude slides for an excessive number of types. Most presentations lack enough close ups. Ratio of close ups to other types is 1 in 3, for effective presentation. Current trend is to use more.

Good luck!

..... Spencer Best

Our finest hours.

A/V Educator Premium Compact Cassettes, Open-Reel Magnetic Tape, and HP-100 Helical Scan Video Tape.

America's finest Audio Visual recording tapes are created to satisfy the needs of the educational community.

- All A/V Educator Compact Cassettes have a lifetime guarantee.
- A/V Educator *Premium* Cassettes are manufactured with high-density, low-noise **Microkots™** tape that is especially recommended for high speed duplication.

In addition to the C-60, black and white Compact Cassettes are available in 10, 20, 30, 40, 90 and 120 minute lengths. Each is packaged in a two piece styrene Philips type box with our exclusively designed blank labels for cassette and box identification.

- HP-100 1/2" Helical Scan Video Tape is coated with Tru-Balance **Microkots-V™** for longer tape life, brighter color and fewer dropouts.

A unique flow-activated binder system counteracts the heat of the rotating video head, and a dual lubricating system in the coating reduces friction and extends performance life. HP-100 is engineered to EIA and NAB specifications and is available in 1/2 and 1 hour reels.

- A/V Educator *Premium* Open-Reel Tapes are packed in a two piece styrene AudioFile® storage box with a library index card. Available in lengths of 600' to 2400'.

January/February 1972

PRESIDENT'S COLUMN

HAVING BEEN on IFPA's national board for several years, the last two as national executive vice president, I have seen the inner workings of an organization, the problems, the problem solving, and the dedication of a number of people who make it all work somehow. Even so, there is a feeling of additional responsibility upon arriving at the place where the buck stops. This tends to cause the mind to turn to a solution clichés like an eye on the future, an ear to the ground and a nose to the grindstone—an interesting picture chiropractically.

In this vantage point a few observations from a new president may be in order. First an accolade to all the people who worked so hard for IFPA last year, and especially to Bob Taggart for his efforts above and beyond the call of duty. Fortunately he remains on the national board for the position of immediate past president.

Finally, I'd like to talk a bit about why people join organizations, not necessarily IFPA, but any group. In the autumn of '71 I attended a

chapter meeting in San Francisco, and in speaking to them happened to think of a friend of mine, a doctor, who had coaxed a group of friends into meeting one evening a week to discuss anything that they wished. They comprised a cross section of the professions and the business community, about ten men. The one characteristic they had in common was that they were all successful in their respective fields.

Now, all of them were of course very busy; time wasting was not a part of their lives. Why would this type of successful, busy person take the very considerable time to meet for several hours once a week, just to talk?

The answer is that the doctor and his friends were using a principle, a principle that is used by many advertising agencies in a variation called brainstorming, and used by all groups and organizations whether they realize it or not. It is the mind stimulating, inertia dissolving effect of *group interaction*. We are helping to think in new categories; we are helped to move faster toward our individual potential.

All of us have additional reasons for joining and serving any group. Obviously there is a desire to make new business contacts and renew old ones, to obtain new information and techniques, even to be simply friendly and be with other human beings; after all the life of a hermit is for the very rare few.

But behind the multitude of reasons for being a member instead of a loner is, I believe, the innate need of a man to seek help and revitalization from his fellow man. We flock together in cities, in groups, in clubs, even for lunch. There must be something in our very bones that calls us together, so let's use this need.

If you've been missing IFPA meetings because they took a little time, think again about the group interaction principle. Try volunteering for a committee, for anything; make yourself known and heard. Enlightened selfishness is a two way street; we can help each other and ourselves at the same time. Let's grow with IFPA in '72.

—Michael Rye

70 CONFERENCE PROCEEDINGS NOW AVAILABLE

Long overdue but finally available, the 1970's: Challenge or Change", report on the information-packed conference held November 1970 at Port Beach, California, can now be obtained from IFPA's headquarters.

Among the important papers contained in the volume are those of Dr. E. Chigos, President, National Unity, and President, Training Corporation of America on "Our Practices" relating to the eight essentials to a

successful, happy professional and family life.

Lon Gregory, former Editor, Business Screen Magazine, now with the film unit of Caterpillar Tractor Co., and Editorial Vice President, IFPA 1972, on "Our Business Ethics".

Robert (Bob) Scott, Director, Washington Office of the Aerospace Corporation and a founder, past president, and governor of IFPA, on "Our Latent Image" with another of his in-depth, fantastic presentations on the state of AVCOM and those who make up our profession.

James Gibson, our keynote speaker, Director National Audio Visual Center, National Archives, Washington,

D.C., outlining "The Challenges to Filmmakers" and explaining the new source for any and all government stock scenes.

Father Emory Tang, Producer, TELESPOTS, Franciscan Communications Center, Los Angeles, on the "Challenge of the '70's." A command repeat performance from 1969 San Francisco Conference, a presentation people still like to talk about.

Bruce Herschensohn, Director, Motion Pictures and Television Service, U.S. Information Agency on "Our Conscience." The recent impact film has had on America and the world: conscience or lack of conscience?

Q. I'm shooting still photos for use in a 16mm film which will be reduction printed to Super 8. Any advice?

A. Yes. Expose original transparencies for low contrast. There are three steps beyond the original at which contrast will build; motion picture photography, color inter-negative, and Super 8 reduction printing.

If your original transparency looks too flat, chances are good the final print will be just right.

MORE THAN A FILM continued

Wilkinson Sword's film *At 2 P.M. Precisely* is about the Wimbledon tennis tournament of 1971. Audience that book it—school and adult alike—receive a supply of booklets giving tips on tennis from Rod Laver, a Wilkinson spokesman, and samples of Wilkinson's new bonded razor.

Armour-Dial, with its grooming film *Good Looks—Here and Now* sends school teachers a file folder containing a 16-page teacher's guide and a supply of two-color 16-page student booklets.

Teacher's Guides make valuable assets for film distribution. 96% of teachers surveyed wanted them.

Chrysler Corporation, with its several films about Little League Baseball has supplied an 84-page Little League Training Handbook and a supply of folders called "Facts About Little League." Chrysler's films support the community relations work of its dealers, many of whom sponsor Little League teams.

The question you may ask at the point is, How to do it?

Modern Talking Picture Service has a teacher's guide package for \$3,000 which includes copy by a properly qualified author, layout, printing and distribution of 3,000 guides. We have prepared guides for a number of sponsors. If you spent, say, \$50,000 for production of a film, \$8,000 for 10 prints and \$11,500 for a year's distribution of 3,000 bookings—a total budget of \$68,500—the \$3,000 teacher's guide package would be a mere 4½ percent additional.

Modern also distributes a variety of supplementary materials provided by sponsors. The service includes storage, handling, addressing and jiffy bags, envelopes. Since the shipment of supplementary materials is keyed to film playdate, it does make sense for the film distributor to handle the job.

Most of the booklets and other materials seem to be created by advertising agencies and public relations firms. But here again your distributor may be able to help. Modern, for one, has the know-how, the talent and the printing facilities.

FREE SPECIAL AWARDS GIVEN IFPA CONFERENCE

Andy Awards and Banquet was occasion for three special awards, traditional and one new presentation this year.

The Jay Gordon Award, in memory of IFA's first president, went this year to Alan Landsburg, of Alan Landsburg Productions, selected for contributing to the image and stature of the non theatrical, informational business. Producer of the National Geographic TV Specials, the Les Costeau undersea programs, Landsburg was formerly associated with David Wolper, last year's recipient.

A new award this year, The Alan Keefer award was given in the name of the pioneer in equipment rental

Alan Landsburg receives Jay Gordon Award from Miss IFPA, Cathy Coffee.

and lease. Grant Loucks, committee chairman announced the selection of Eclair International for the development of the first silent, portable, 16mm sound camera. Mr. Marvin Miller, actor so well remembered for his television roll in "The Millionaire" presented the criteria for the award and selection and then introduced Mr. Sam Getsoff, of the Eclair Corporation of America, who accepted the award given for Technical Excellence.

The E. C. Keefer/CFI award was passed from the hands of the Martin

Jack Gabrielson accepts E. C. Keefer Award for Santa Monica film group of McDonnell-Douglas Corp.

Marietta Co. of Orlando, Florida to the McDonnell-Douglas Motion Picture Unit in Santa Monica, California. Doug McKinney handed the award to his counterpart Jack Gabrielson for a years retention and display. This award is given to a film unit which has consistently displayed a high degree of professionalism in the films they produce and was named in memory of Gene Keefer, a pioneer industrial film unit leader and proponent of creative and technical innovations and quality.

A SOUND

... that lets you transform a lackluster slide presentation into an exciting audio-visual show. By adding voice. Music. Sound effects.

Sound-O-Matic™ Programmer-Recorders and Playback Units are compatible with most automatic slide projectors that have remote control. Their tape cassettes give you up to 60 minutes of audio—from commentary to Carmen to Calypso. And automatically advance each slide—in perfect synch with the audio—using inaudible signals programmed onto the tape.

Record the audio at your leisure. Listen to it critically. Edit, or erase and rerecord until you're satisfied that your presentation has the impact to hold your audience. The "sizzle" that will help sell your product, service or idea. Or the credibility you need for effective training or teaching. Then ... make your presentation in confidence. And relax and enjoy it along with your audience.

Sound-O-Matic units are available in four versions, each of which is capable of high quality audio recording. The Sound-O-Matic I Programmer-Recorder, in addition, lets you record onto and erase from the tape inaudible signals which automatically advance each slide in perfect synch with the audio. Model III gives you everything that Model I does plus a response feature that allows you to program pauses into your presentation for audience participation. Sound-O-Matic Models II and IV do everything that Models I and III do respectively, but do not have the programming (synch tone) feature. They can, however, control projector slide advance by playback of pre-programmed tape.

For full details or a free demonstration of these sound investments, contact Optonics Corporation, Montgomeryville,

INVESTMENT

SCHOLARSHIP EXTENT REVEALED

At the Saturday luncheon in the San Diego Room during the 12th National Conference, the Chairman of the E. C. Keefer Scholarship presented the Award to this year's winner, Joseph Daccurso, graduate student at the University of Southern California.

The grant this year amounted to \$3,000 in cash and services, donated by the following firms and individuals:

Consolidated Film Industries
Hollywood Film Enterprises
F&B/CECO/SOS, Inc.
Glen Glenn Sound Company
Southern Library of Recorded Music

Computer Image Corporation
Mrs. Eugene C. Keefer
San Diego Chapter IFPA, and
The National Board of Directors

Last year, the grant went to Mr. Glenn Erickson, first year student at UCLA. The scholarship is a combination of cash for tuition, books, and board, and production services donated for use in preparing film assignments and a final thesis in film form. Mr. Erickson's award amounted to \$2,770.00 combined total.

IFPA Conference team for '72. From left, standing, national president Michael Rye, national executive secretary Jackie Stilwell, conference program chairman Bob Hecker, and conference chairman Ralph Hall, get CINDY awards chairman Jack Whalen (seated) off to a good start.

NEW CINDY LIBRARY

Clearances and TV releases are coming in for the winners of the 1971 Cindy Film Awards, and again this year, the cream of the crop will be available to chapters, organizations, and individuals for private or group screenings. Request should be addressed to Cindy Library Chairman Bob Gobrecht, Dept. 516-00, General Dynamics, P.O. Box 1128, San Diego, CA. 92112.

Don't be a slave to your Filmstrip Negative

Shooting the master negative is all important. If it isn't done well, you'll be a slave to it forever! A poor master negative means poor release prints.

Give us your originals, transparent or opaque, light or dark. It really doesn't matter. When we finish your negative, no one will be able to tell the difference.

Shooting masters is our specialty! We've been doing it for over 20 years. That's a lot of know-how. All with one purpose. To shoot the very best filmstrip masters . . . so that you can have release prints that you'll be proud to say are yours.

Why take chances! Call Berkey Manhattan. We'll be happy to discuss your shooting needs, time requirements and costs. No obligation, of course.

the producer's viewpoint as well? Kodak will miss his sage counsel, his fervent enthusiasm and foresight. But the field regains a dedicated filmmaker as John Flory returns to his lifework with new zest and the encouragement and utmost goodwill of all of us who have known and respected him through these many years.

"Museums Without Walls" Series of Art Films Merits Our Applause

We cheered lustily when we heard that a long-awaited dream of great film achievement had lighted the screens of dozens of universities and museums last month. The premieres on October 25, birthday of Pablo Ruiz Picasso, of the first of a really important new series of films for better understanding of art and artists, opened a new era for the film medium.

We salute Universal Educational and Visual Arts Division for the eleven films inaugurated with *Picasso: War, Peace and Love*. This series portends to be the first of Universal's program of examining the arts and is well labeled "Museums Without Walls." The creators and their cameras have brought widely-scattered collections from several continents into a single focal dimension.

Lucien Clergue directed the *Picasso* film, imposing images to show us the

changing artist, from youth to maturity. A fine realist turns to complex forms as the viewer looks at a single day's output of the prodigious Picasso is glimpsed as drawings flash on the screen from a single day's work.

The telecast *Louvre* with commentary by Boyer, gave us an example of the film's capacity to show art as we could ever see it. This series, moving from Picasso to the works of Giotto to Giotto, to *The Impressionists* and far out to the mood and tempo of *German-Dada*, has the benefit of sound commentary by art historian Douglas Cooper.

These are hour-long films, each a program event and will begin to appear in American showings at art museum university auditoriums and the like. It is the privilege, unless Universal rejects a good idea, of any cultural community-minded corporation, or public-spirited citizen to sponsor showings if the occasion arises. We say that such sponsorship, when in New York, St. Louis or elsewhere would be a great privilege for the viewers and any who help make it possible.

You can get all the details about the "Museums Without Walls" series from Universal's Educational and Visual Arts Division in New York City.

AUDIO / VISUAL

Triple Play

CASSETTE / SLIDE
FILMSTRIP

ALL NEW SYNCHROMATIC AV2200

We've put this three-way combination all together in a compact audio/visual programming center that quietly and automatically synchronizes your 35mm slides and double frame filmstrips with the sound of cassettes.

With the AV2200 you can record and sync-pulse your own program or play pre-recorded cassettes . . . all with instantaneous playback.

There has never been anything like it for training, sales promotion or learning programs. It's built right, simple to operate and extraordinarily versatile.

The AV2200 is all wrapped up in an incredibly portable attache case that includes its own lights-on super size rear screen for group or individual viewing.

With Synchronomatic AV2200 . . . a triple play is an everyday affair!

Write for full details.

Last year Graflex developed the
jam-proof instant loading 16mm projector

Comparing the loading ease and speed
of the *Orange Route* to any other 16mm system
is like comparing apples and oranges. There's
no comparison!

This year we've added
fast-forward

We call it the Insta-Load SL

The Insta-Load SL
16mm projector does it all.

Fool-proof loading in
seconds. New fast-forward speeds instruction
and film selection technique. Add a special
frame counter to pinpoint important film seg-
ments. Include a simplified control console
that's pushbutton operated.

It's all in the SL, more operating conve-
nience than any 16mm projector ever built. The
new speed and film safety
features of the Insta-Load SL
deem it ideal for teaching, pre-
viewing and improving film

handling in the classroom.

Whether you're an educa-
tor, or a training specialist in the
business and industrial world, the SL can make
your work load lighter.

Your Graflex Audiovisual Dealer is
ready now to demonstrate all the unique bene-
fits built into the superb line of Graflex 16mm
Insta-Load projectors. Call him today.

It's amazing what you can still buy for \$10,000.

When your company is trying to make an impact with its message, \$10,000 doesn't go very far these days.

It could buy you one page in a national magazine with limited circulation.

Or a one-minute spot on network TV. (Class D time, of course.)

Or maybe a few ads in a newspaper.

And that's it. Finished. You've shot the budget.

But take heart. There's still one medium where your company can buy a whole year's program for \$10,000. A medium that's so versatile, you can tailor it to pinpoint the audiences you want to reach. So that every dollar works twice as hard.

We're talking about business sponsored films.

Through Modern's seven highly-developed channels of distribution, we can take your filmed message and put it where it will do the most good. Consistently.

More important, we can do it many different ways.

For example, with \$10,000 a year you can reach 5 million TV viewers, and 200,000 members

of school and adult groups.

Or, if you like the prestige of being seen with top-name feature films, we'll bring your story to 2.5 million theatregoers.

Or maybe you want to reach community leaders, students, and people who travel. We'll introduce you to 250,000 of them—at their own request!

And that's just a sample of the flexibility and impact you can buy with a year's sponsored film program.

If you'd like to know more, give us a call. We'll show you how far \$10,000 can really go.

Modern Talking Picture Service, Inc

1212 Avenue of the Americas, New York, N.Y. 10036
World's largest distributor of sponsored films and video tapes:
The Fifth Medium.

If you want
the sock, the
sophistication and
the sizzle of
multi-image, you
have to pay the
price.

\$465.

Actually, half price.

Working on tone pulses from your stereo tape recorder, the Quadra Que four-channel programmer runs any combination of four projectors to give you a faultless mix of slides, filmstrips and motion pictures. And if you run fewer than four projectors, you can use Quadra Que's automation to program anything from the house lights to the popcorn machine.

Quadra Que gives you important *exclusives*, too. Remote control, for example. Toggle-action programming switches. Compact, ultra-reliable integrated-circuit design. And 15-watt power outlet for your movie projector.

Want capability that grows with your ambition? Just add our companion Quadra Que 2 programmer, and get a total of eight channels, all still automated from a single track of your tape recorder.

Then there's the exclusive that may mean more to you than all the rest: programming sophistication without temperament. Even with the least expensive tape recorder, Quadra Que works perfectly every time.

If you're going into multi-image, go easy. See Quadra Que in action at any Spindler & Sauppé dealer, or write Spindler & Sauppé, 13034 Saticoy St., North Hollywood, Calif. 91605 (phone: 213-764-1800) for full details.

Spindler & Sauppé qq QUADRA QUE

Instead of trying to be
good at everything...

we prefer to specialize...and be BEST!

A "one-man band" is fun to watch. He's adept at handling many instruments, but he can't possibly match the great technical skill of a trained soloist.

If you want flawless performance, select a specialist.

Here, at Frank Holmes Laboratories, we have specialized in filmstrips and color slide duplicates since 1948. They're not a "side line" with us. They're our only business.

When you've concentrated on doing something well . . . and spent 24 years at it . . . you're likely to do it very well indeed. And we do.

We routinely handle problems often considered insoluble.

We have designed much of our own equipment . . . developed an exacting control procedure . . . and instilled in every department an outstanding enthusiasm for perfection.

Our promise to you: No matter what your material is, we can do more with it — and get more out of it — than anyone else.

The reason is simple enough. After all, no other lab in the world knows as much about processing filmstrips and color slide duplicates as we do. Or cares as much.

Write today for our new free catalog!

ACL HAS CLOUT

ACL gets it
it's quick, quiet and lightweight
below freezing or in humid heat —
it catches the action with
a frame line as steady as a rock.

ECLAIR ACL, the new 16mm camera
shoots 200 feet of film,
changes magazines in less than 5 seconds.

Weights less than 9 pounds —
is no bigger than a football
and as easy to handle.

Has worry-free accuracy.

Uses any lens,
and can take a lot of punishment.

Also the price is a nice feature.

ACL HAS CLOUT.

It's the professional's camera.

ECLAIR

There is a paradox about photography...

Each hardbound volume is 10" x 10".
Silver-stamped black cloth binding.
Each contains approximately 230 pages,
350 monochrome and color pictures.

Free with your purchase
of the introductory volume in the

LIFE LIBRARY OF PHOTOGRAPHY you'll receive a Photographer's Handbook

It seems an artless art: point the camera, press the button and you have a picture (in a minute, if you like).

A child can do it.

And yet photography is also a distinctive, uniquely modern medium of expression—acknowledged as art.

All sorts of people take all sorts of pictures, from the child's to the artist's, and that's why the **LIFE LIBRARY OF PHOTOGRAPHY** has been designed by experts to serve everyone who uses a camera, whether to record family activities, to pursue a serious hobby, to advance a profession or to communicate an inner vision.

This handsome, new series from **TIME-LIFE BOOKS** assumes no previous knowledge of photography, no familiarity with technical terminology.

Instead, this practical—and strikingly beautiful—**LIFE** "course" offers superb examples, detailed information, step-by-step guidance and no-nonsense advice for both amateur and professional.

You'll begin your subscription with the introductory volume, *The Camera*. Here is an encyclopedic introduction to the art and techniques of photography which examines the different types of modern cameras, the uses to which they are best suited, and the types and characteristics of the lenses employed with them. In addition, a portfolio of outstanding photographs is included along with a brief history of photography.

Then, volume by volume, you'll learn how to use your camera imaginatively and correctly. You'll learn about film, flash, and lighting techniques. You'll discover how to work with developers, toners and enlargers. Famous **LIFE** photographers such as John Dominis, Carl Mydans and Alfred Eisenstaedt will offer you their tips and trade secrets.

For a 10-day free examination of your introductory volume, *The Camera*, just mail this coupon.

This 64-page manual contains hundreds of tips on exposure settings, film types and filters. It's a handy 4" x 8", is spiral-bound to lie flat and fits easily in a pocket or camera bag. It has over 150 photos, charts, tables and drawings. You'll also receive a 13-page *Buyer's Guide* to help select the camera and lenses that are right for you.

TO: TIME-LIFE BOOKS

Department 2149 Time & Life Building, Chicago, Ill. 60611

(available in both the U.S. and Canada)

Yes, I would like to examine *The Camera* Please send it to me for 10 days' free examination and enter my subscription to the **LIFE LIBRARY OF PHOTOGRAPHY**. If I decide to keep *The Camera*, I will pay \$7.95 plus shipping and handling. I then will receive future volumes in the **LIFE LIBRARY OF PHOTOGRAPHY** series shipped a volume at a time every other month. Each is \$7.95 plus shipping and handling and comes on a 10-day free examination basis. There is no minimum number of books that I must buy, and I may cancel my subscription at any time simply by notifying you.

If I do not choose to keep *The Camera*, I will return the book within 10 days; my subscription for future volumes will be canceled and I will not be under any further obligation.

Make moving filmstrips.

Audiscan. The filmstrip that can move like a motion picture. Which means you can stop doing dull slide shows and start producing creatively moving filmstrips.

Start with motion picture continuity in the script. Shoot it on a 35mm still or 16mm motion picture camera. Or both.

Then edit and pace it to match any action. With actual motion sequences at up to 10 frames per second. You get clean picture changes, too, because wiping action is virtually non-existent with the Audiscan System.

So you can reproduce live action in real time. Or slow motion.

Or fast motion. Or animation that's really animated.

You can create dramatic transitions. Build climaxes with facial expressions. Sequence pictures to music rhythm. Produce stimulating strobe effects. Interspersed with slow passages of beautiful photography or real freeze-frame that takes only one frame.

Top it off with a sound track using up to 8-track mixing.

For background music. Multiple sound effects. Dialogue. Precisely synchronized to the pictures with inaudible change signals.

Then put it all together in an Audiscan Synchro-Lock Cartridge

using standard 16mm film and ¼" magnetic tape. And show it to your prospects—the ones who've always wanted motion pictures but couldn't afford them. You'll see why we call Audiscan The Happy Medium.

For more information on The Audiscan System and Audiscan's free production consulting service, write to Mr. Jack Wilkins, Audiscan Inc., P.O. Box 1456, Bellevue, Washington 98009. Or call him at 206-454-0694.

And turn your creative urge into something that moves.

 **Audiscan.**

The Happy Medium.

REPORTS ON CURRENT EVENTS AND TRENDS

U.S. Army GOCO Contract Awarded to H. G. Peters & Co.

A contract for the operation of the U.S. Army's Government Owned-Contractor Operated (GOCO) film production facility has been awarded in 1972 to H. G. Peters & Co., Inc., of Primos, Pa. This means that the Peters Company will set up and operate a film production division at U.S. Army Missile Command, Redstone Arsenal, Huntsville, Alabama, to produce somewhere in the neighborhood of 60 films this year. The contract (actually for three years—one year plus options) covers Army films in such classifications as Information, Training and Technical, as well as TV commercials on Army recruiting.

Hugh G. Peters, President, and Stephen A. Ciechon, Executive Vice President, of the Peters Company have supervised organization of a staff of 20 film production people at Huntsville during January, and production on several films is now well along. The staff is expected to double during the course of the year. A completely equipped 16mm color and b/w laboratory has also been established at the facility.

The Army's film production activities, formerly undertaken by the Army Pictorial Center in Long Island City, New York, until 1970, was contracted to General Electric Company in 1971. This year, regulations restricted bidders to companies qualifying as small business, and a large number of film producers bid on the contract.

What Do Home Economics Teachers Want From Sponsored Films?

Home economics teachers are quite concerned with "relevance" and their curriculum is expanding as a result. A recent survey by Modern Talking Picture Service has shown that 59% of respondents would use films on *sex education*, 48% on *world cultures*, 47% on *narcotics*, and 34% on *environment and conservation*. The same concern with relevance (to the kids) made the teachers cool to the idea of more academic experts on screen, but enthusiastic about "known personalities" that teen-agers can identify with, such as sports stars and young musicians and actors. Modern's survey also indicated that home ec teachers are still very much interested in the

more traditional areas of food and clothing.

Video Projection System Developed by Sony

A video system designed to project television pictures on a screen about 50 inches in diagonal measurement (or about four times as large as the typical large-screen monitor) has been developed by the Sony Corporation.

The system, composed of tuner, projector and screen, is expected to sell for about \$2500, and will have applications in the industrial and educational fields.

The projector, which will be marketed in the fall of 1972, is expected to appeal to users of video cassette systems. Sony's U-Matic Video Cassette equipment is now being delivered to franchised dealers in the U.S. with a price tag of \$995 for the player and \$1395 for the player/recorder.

Monsanto Multi-Use A/V Center Announced

Monsanto Company is moving to a new building on New York's 42nd Street facing Bryant Park. A 12th floor A/V Center designed by Hubert Wilke, Inc., will house executive and staff meetings, sales presentations, new product demonstrations, training programs and such special events as seasonal fashion shows.

When the runway is out and live Monsanto models parade in the very newest fabrics and fashions almost every feature of the system will come into play.

The rear projection of multiple images will permit an ever-changing backdrop to complement each particular fashion design. Ski-wear may be modeled against the slopes of Sun Valley; swim suits seen in a setting right out of St. Tropez.

To further provide a total environment for merchandising, the audio system can mix a stereo sound pattern that combines appropriate background music with the sound of skiers and a crashing surf.

Monsanto's new multi-use room will have the capability of videotaping specially produced programs for replay to stores and offices around the country.

To meet instructional training requirements, the TV facilities may double for role-playing sessions while the slide and film projectors can be remotely controlled from two lectern

positions on either side of the 5' x 7' dual-image screen, as well as from a projection booth.

Viewlex's New Systems Approach

Viewlex, Inc., has formed an industrial sales division to integrate the technology available through its various subsidiaries and to provide complete systems consultation and implementation for industrial clients.

Viewlex is active in a great many facets of sight and sound communications. President David Peirez and Marketing Director Clark Lambert envision a systems approach as a most effective benefit to the industrial client.

Short Takes

The Theme of the Society of Motion Picture and Television Engineers' 111th Semi-Annual Technical Conference in New York, April 30-May 3, will be "The New Film Making—Changing Trends in Motion Picture and Television Production Methods." Technical papers to be presented will emphasize the changing methods of technology today's film maker faces.

Musicues Corporation, U.S. distributor of the Chappell/Sonaura background music library for films, has appointed Richard Einfeld Productions, Hollywood, as west coast representative. The Einfeld office, at 111 North Las Palmas Avenue, will have the entire Chappell library available for auditioning, music selection and transfer.

Charles "Cap" Palmer, Hollywood producer-writer and head of Paramount Pictures has been presented with a 1972 "Distinguished Citizen Award" by the U.S. Civil Service Commission for his work on *The Supervisor* and *Equal Employment Opportunity*, a film concerned with upward mobility of minority and women workers.

MPO Videotronic Projector Corp. has moved its sales and service headquarters to 305 East 44th Street, New York.

Vacuamate Corporation and its associated company, FilmKare Products Company, have moved to 207 West 25th Street, New York.

continued on page 43

Does the fact that MPL is a complete 16mm laboratory under one roof have any special advantage for you?

The answer is **YES.**

has very special advantages
for you because:

1. It assures you that your
film will receive personal
attention from the time it
reaches MPL to the time it is
completed and returned to
you.

2. It assures you that your
film will have the uniformity
of quality which depends on
its being handled by a single,
unified organization. (MPL
doesn't farm out your film
like "piece work" to other
labs.)

3. It assures you top speed
in getting your work done
because first to last all the

work on your film is done
right here.

There are very few *complete 16mm laboratories* in this
country. MPL is one of them.
MPL is the fastest-growing
16mm laboratory in America.
There must be a reason.

Our services include:
Processing/Printing/Editorial
/Titling/Scripting/Sound/
Optical Effects/VTR to film/
Super 8mm Prints.

MPL stands ready to
serve you. Send us your film
today!

paradox

BY STANFORD SOBEL

PARADOX: Innocence is the origin of cynicism.

Every producer and writer I know has had the following experience: A client calls up and says, "Listen, I have to get out this cheapie. I don't want your deluxe-type movie, but just a little quick-and-dirty film for as few bucks as possible. In fact, I'm stealing the money from a brochure budget and hiding half of it in the next fiscal year. What can you do for me?"

Readers, I can see the little half-smile of pain flickering across your face. You know he has you on the horns of a dilemma. If you *don't* take the job, you make an enemy. He'll remember that you turned him down the next time he wants a film. You're practically inviting him to go to a competitor.

But, on the other hand, if you *do* take the job, you know right here and now that the film is going to be straight from Disasterville. After all, practically everything you do in making a film is going to cost as much for a cheap film as for an expensive one. And furthermore, you know perfectly well that he's going to compare this "Little Picture" directly to the best big budget film you ever produced for him or anyone else.

Nevertheless, things are a little quiet and you have a couple of bright young people to whom you'd like to give a little freedom and responsibility, so you say something like "O.K., we'll work with you on this one, Charlie." And his next line is: "I thought maybe we could use Alexander Scourby for the voice and Boris Kaufman for the shooter. What do you think?" I'll just let you fill in your next line for

yourself because this magazine is not rated "X".

That's what I mean about innocence being the starting point of cynicism. There probably have been cases where someone wanted a low budget job and was willing to judge it on that basis. But it doesn't happen very often.

I have a theory about why our business works this way. My theory works better for writers than it does for producers, but I think it applies to an awful lot of producers, too. A writer really doesn't have two levels of working quality. A writer *always* writes just as well as he possibly can write, even if he's only sending his mother a postcard from Vermont. This is not because writers are a superior breed of human beings but rather because writers are vain people.

It's part of my vanity that I consider myself a superb speller and a flawless grammarian. It would actually be very hard work for me to spell badly, use poor grammar, copy from an old proposal, or fill in new names and products in Script Formula 7-B.

There's another important factor about writers, unique to the profession. You have to have enormous self-discipline. There's nobody standing there watching the words come out on the typewriter and nobody except you yourself can make them come out. Even if you work for a boss and you have to meet an air deadline, the primary discipline that forces you to work comes from within, not from outside sources.

You may very well mutter to yourself at 3 A.M.: "Believe me, if it wasn't for the money I wouldn't do it!" But that's a lie . . . you would do it and you know you would. There is no logical reason for becoming a writer. It's a compulsion . . . one you cannot resist. And for that same reason, whatever it is, you cannot intentionally write poorly or quickly or haphazardly in order to meet a low budget requirement.

Not everybody believes this, of course . . . especially not every client. Last year I had a remarkable example of what I call "The Paradox Of Coincidence." You all know that liquor companies have Christmas shows, in

which they present their new campaigns to distributors and retailers. Last year, at exactly the same time I wrote two of these shows, for directly competing liquor companies, and of course, for two different producers.

(Like New York City buses, script assignments often seem to have the herding instinct. This kind of thing happens all the time to me.)

I have before me, framed on my wall, the letter of appreciation I received from one of these clients. In which he refers to the presentation as "... the best we have ever done..." It arrived I am happy to say, with a generous supply of their product. The other liquor clients were so unhappy with their script that they spent most of the night before the show opening rewriting the final draft. The earlier drafts, for some strange reason had seemed to be entirely satisfactory to them up to that point.

In both cases I worked equally hard, wrote as well as I could, spent weekends and holidays slaving away at the scripts, and certainly invested each script with all the skill, creativity and originality that I could. And, happily, both *producers* were well pleased with my work. But in the one case I was a smash and in the other a flop. The first reader who says "That's Sho Biz!" has to leave the room.

I don't personally have two levels of quality to my writing, and I don't believe that producers do either. I think it is naive to attempt to satisfy a low budget client. Clients simply don't understand that in this industry we are our own severest critics, and our own highest quality control specialists. A client usually ends up with the kind of picture he will allow us to make for him . . . superb, average, or mediocre. But whatever kind of picture I gets . . . at least we have done a very best work to get it for him.

And now for the quiz. Earlier in this column I referred to myself "a flawless grammarian." Intentionally, I made one very subtle, but common grammatical error in the article, and if anyone can find it and write me a letter pointing it out, I will receive in return a personal reply from me, written, it goes without saying, in the very best hortatory manner I can muster.

Stanford Sobel is a free-lance writer based in New York City who writes "Paradox" for each issue of this magazine. He assures us that although he sometimes cynical, he tries hard to remain innocent of bad grammar.

AURICON 16mm Sound-On-Film for Professional Results!

Auricon
Hollywood

ALL AURICON EQUIPMENT IS SOLD WITH
A 30 DAY MONEY-BACK GUARANTEE.

CINE-VOICE II 16mm Optical Sound-On-Film Camera.
100 ft. film capacity for 2¾ minutes of
recording. ★ 6-Volt DC Converter or 115-Volt AC
operation. ★ \$1180.00 (and up).

Auricon
Hollywood

AURICON PRO-600 16mm Optical Sound-On-Film Camera.
★ 600 ft. film capacity for 16½ minutes of
recording. ★ \$1820.00 (and up) with 30 day
money-back guarantee.

Auricon
Hollywood

"SUPER 1200" 16mm Optical Sound-On-Film Camera.
★ 1200 ft. film capacity for 33 minutes of
recording. ★ \$6425.00 (and up) complete for
"High-Fidelity" Talking Pictures.

Auricon
Hollywood

PRO-600 SPECIAL 16mm Light-Weight Camera.
400 ft. film capacity for 11 minutes of
recording. ★ \$1620.00 (and up).

Auricon
Hollywood

PORTABLE POWER SUPPLY UNIT — Model PS-21... Silent
in operation, furnishes 115-Volt AC power to drive
"Single System" or "Double System" Auricon
Equipment from 12 Volt Storage Battery, for
remote "location" filming. ★ \$337.00

Auricon
Hollywood

FILMAGNETIC — Finger points to Magnetic pre-stripe
on unexposed film for recording lip-synchronized
magnetic sound with your picture. Can be used
with all Auricon Cameras. ★ \$1325.00 (and up).

Auricon
Hollywood

IP00—Models FT-10 and FT-10S12...
In-Tilt Head Professional Tripod for
smooth action. Perfectly counter-balanced
to prevent Camera "dumping." ★ \$406.25 (and up).

Auricon Equipment is sold with a 30-day Money-Back Guarantee. You must be satisfied.

Strictly for Profit CHOOSE AURICON

If it's profit you're after in the production of
16 mm Sound-On Film Talking Pictures, Auricon
Cameras provide ideal working tools for shooting
profitable Television Newsreels, film commercials,
inserts, and local candid-camera programming.
Now you can get Lip-Synchronized Optical or
Magnetic Sound WITH your picture using Auricon
16 mm Sound-On-Film Cameras. Precision designed
and built to "take it."

MANUFACTURERS OF PROFESSIONAL 16MM CAMERAS SINCE 1931

Simple Smooth Silent

The J-4 "Joy Stick" Zoom Control

You'll find no jerks, bumps, or noise in the J-4 "Joy Stick"! The most critical professionals in Hollywood have tested, and accepted it as the standard in zoom controls. High reliability combined with easy, uncomplicated operation sets it apart and ahead of anything available.

Smooth? A true servo feedback system, provides constant speed through full zoom over a wide speed range (1½ sec-4½ min).

Exclusive Joy Stick control gives gradual start/stop to and from preset maximum.

Simple? Complete control under your thumb . . . You set the rate and your thumb does the rest! The fully self-contained, compact control box, has a built-in rechargeable battery.

You get what you want, when you want it, the way you want it — simply, smoothly, silently!

Brackets and gears are available to fit all zoom lenses and all 16mm and 35mm cameras.

Ed Di Giulio Says:

Zoom controls have always been a pain-in-the-neck! It's almost impossible to design one that satisfies everybody. We know — we've gone through four complete redesigns over the past three years in perfecting the Model J-4. Its success is attested to in its use by Hollywood's professional cinematographers to the virtual exclusion of all other types.

But the real surprise is that a zoom control as sophisticated as the J-4 "Joy Stick" has been accepted by 16mm cameramen as well!

Technology in the
service of creativity.

the camera eye

VIEWPOINT AND COMMENTARY BY O. H. COELLN

se the "Expectation Gap?"

ADA'S PRIME MINISTER, Pierre deau, has called it an "expectation gap" which divides our societies. December, interviewed by the New York Times' James Reston, he said, basically, societies need security; need to be reassured; they need to feel everything is going to be all right. If they can't get that feeling from elites that deliberately give them options and choices, the consequence will be that the free process of government as we know it is going to break down."

Think about it. Readers of this column include top management people in American and overseas industry, labor groups and governments. Ask yourself, in that spot, whether or not you should be an activist in the cause of properly-conducted free enterprise. Are you and your group letting environmentalism be the sole prerogative of ideologues, ill-informed do-gooders and amateur ecologists.

We're just not seeing important, needed informational films coming into the field in both the number and quality so urgently needed. If truth be told, justice are *truly* on your side, pick up!

A single national (and international) distributor of such sponsored motion pictures (Modern) made about a million and a half bookings last year. How many of those subjects spoke up for industry's viewpoints on pollution, law-and-order, citizenship, etc? Nothing excludes a *responsible* labor organization from "speaking up" for what it believes its respective industry could be doing. I. W. Abel, president of the United Steelworkers of America, has the theme of such a film in what he told delegates last September at his Basic Steel Briefing Conference:

"We have this great contract and great gains. This is our industry and we have a stake in it. We are faced with competition from Socialist and subsidized industries and we have got to do everything possible to see that our industry works efficiently."

Abe, the steel companies have to depend on how much of that message gets to the rank and file through your delegates. Why not *make sure* the rank and file in the mills get the message clearly and completely? The steel

industry's recently-created four-man joint union-industry committee could well afford to make this a priority project: 10-20 minutes of facts, figures and straight hard talk about steel productivity in America's economic future!

Kodak Shows Cine Selection

Kudos to Kodak. That Company's recent showings at its Manhattan Gallery Little Theater (1133 Avenue of the Americas) of selected, award-winning Cine Golden Eagle Films, launched on January 11th should inspire Bell & Howell to "go thou and do likewise" in Chicago; and any other sponsor (how about it Consolidated Labs?) to showcase the program at a suitable site in Los Angeles, etcetera.

We believe you have to "show 'em to sell 'em" and these top-rated informational films merit places where potential sponsors and users can see the product!

"Hard Sell" TV in '72

Looking at the "tube" down here in the Ozarks is the same as anywhere else. Today's TV commercials are hard-sell and no kidding around, except for Alka-Seltzer and two noteworthy "ecology-minded" sponsors: Shell and Texaco.

Gonna be hard to pick those "cute" commercials for this year's prizes. As Variety's Carroll Carroll recently columnist "as far as the viewer is concerned, commercials are better when business is good and worse when business is bad . . . when the economy is going well, they can be fey and cute."

But like the man said, "which would you prefer, seeing an occasional stinking commercial or putting out x dollars a year in pay television for the privilege of looking at the same rot you're looking at for nothing now?"

Your New Market: China?

New market opening up? During the mid-1960's, three British films, including a documentary, were bought by the People's Republic of China. Recently, China took on two more British films: the first Western films to be given any kind of theatrical dis-

tribution there in more than two decades. Carrying any prints to Peking, Mr. Nixon?

Tax-Break for Producers?

You are a producer of "ready-made" motion pictures to inspire salesmen, improve employee relations, lower accident/death rates through safety education films, etc. Or you produce educational motion pictures for sale and rental to schools, industry, churches, etc. Better look into new Federal legislation on the investment tax credit which specifically applies to the "movies" and not just to studio purchases of cameras, sets, etc. on which it *also* applies. This recent move by the Nixon Administration is intended to help *entertainment* film makers but who sits in judgment as to what's in a film production as to "entertainment" qualities or real usefulness? We believe the present Administration would also wish to encourage all relevant made-for-profit motion pictures.

Worth looking into at IRS regional offices and in Washington, by film makers and their respective associations (NYFP, IFPA, etc.).

Also, BARRON's reported on January 24, "the Internal Revenue Service has changed its depreciation rules for motion pictures, providing for faster write-off of production costs." Don't know how that ruling might affect the maker of syndicated films but if you're in that category: check this ruling, too.

Guggenheim on McGovern Team

Charles Guggenheim, famed for his Kennedy era documentaries and for some of the best in industrial films, has a rugged assignment this year. He's working to build the White House aspirations of Senator George McGovern. The Senator, according to syndicated columnist James Kilpatrick, has "created the most proficient campaign organization in the business" and "has attracted top professionals from the old Kennedy and McCarthy teams."

Charles has a tough job ahead, with six months to Miami and his man running ice-cold as the New Hampshires but who sits in judgement as to shire primary looms.

continued on page 43

a-v man

Gerald K. Hall, Director Audio Visual Services, National Cash Register Company, is Business Screen's A-V Man in this continuing series of profiles of leaders in the industrial audio-visual world.

Early in February, a national conference on community television—CATV—was held at the National Cash Register Company's Education Center in Dayton, Ohio. Sponsored by the Kettering Foundation and the Ford Foundation, and composed of over 500 local, state and national figures, the conference looked at many of the problems confronting modern day communicators and what is being done to solve them.

As a participant in the conference, Gerard K. Hall, Director of Audio Visual Services at NCR, was struck by the parallels between CATV's problems and those of the job of industrial communications, in which he is engaged.

"To me," he said recently, "the most

interesting aspects of the conference were the questions of who should control a communications system and how you should program for it. These questions have a direct bearing on the A-V man of the future. In other words, regardless of the medium used, *who* develops, implements and controls the communications programming, is a most significant factor. If the AV expert does, then I believe he is a true professional and the field will prosper. If he doesn't, if he acts merely as a mechanical communications controller then the profession will not grow."

But Hall, who has been a leading industrial audio-visual practitioner for over a dozen years, believes that these problems *are* being solved and that a strong future for audio-visuals lies ahead.

"There will be more jobs and a greater need for skilled technicians in the years to come. As technology goes more and more electronic, there will be a growth in the need for engineering expertise. But for the category of 'Audio Visual' as a profession to grow, indeed even have a meaning, more involvement in programming and content considerations are a necessity."

Gerry Hall has had a significant voice in national audio-visual affairs for a number of years. He is a member of the Minnesota Videographic Society, the National Industrial Television Association, the Audio-Visual Advisory Committee of the Association of National Advertisers, and has been an officer of the Industrial Audio-Visual Association. He is now serving as its president for the 1971-1972 term. At National Cash Register, his job is "to provide total communication sources, including motion pictures, closed circuit television and video tape recording, sound slide films, live presentations, audio recordings, overhead slides, multi-media presentations, etc. for educational, sales promotional and information dissemination purposes for the sales, service and customer support force at all times, in addition to providing complete audio visual support and production to all areas accountable to the Marketing group office, as well as other corporate offices such as Executive, Research, Development and Manufacturing", as the official NCR function description states it. He operates out of NCR's Sugar Camp Education Center in Dayton, which has some of the most magnificent audio-visual capabilities in the country.

In view of the leading position in the audio-visual world that he occupies, it might be supposed that he had been made for the job and trained for it all through his early years. Actually, rather than finding the job, it found

him. Joining the National Cash Register Company shortly after graduation from Columbia University, he started as student salesman, progressed through various stages of direct marketing functions, did some promotional work, and was eventually promoted into the home office as a Sales Training Specialist. In this position he had to specialize more and more in audio-visual aspects of the job.

"I was not an artist," he says, "but I began to design overhead slides for instructional purposes. I was not a motion picture producer, but I began to write and direct the production of motion pictures and sound filmstrips. I was not a programmed instruction specialist, but I began to prepare materials for audio programmed text. I was not a stage director, but I began to produce and direct convention meeting programs."

"In effect, I learned as I worked. The old Rheingold beer commercial went, 'I don't know what I did, but I must have done something right.' In any rate, in 1965 I was named Manager of a new department, Audio Visual Services, and 100% of my time was now involved in the audio-visual field."

In 1969, with the addition of new responsibilities and new organizational changes, he was promoted to the position of Director, Audio Visual Services, Marketing Education and Publications, a position he now holds.

Hall's membership in the Industrial Audio-Visual Association has been a source of inspiration to him for the past eight years. "When I came to IAVA, it seems to me that the majority of members were involved more in motion picture production and distribution. Today, we have members heavily involved in just about every type of audio-visual communication possible. The opportunity of sharing these experiences has never been greater."

"There is a warmth and intimacy in IAVA that is difficult to describe. I have never called upon a member for a problem and not had an answer or referral to someone who could better answer it. This is a prime advantage of a small group with careful screening of members."

"The future of IAVA is difficult to chart. Some members feel we should 'open the doors' to individuals excluded by our constitution. Others want to form alliances with larger, vendor-oriented, associations. There has been agitation that IAVA more aggressively perform the role of an industry spokesman. Since this is America, I guess we are all entitled to our opinion on the way IAVA should go in the future."

Personally, I think that IAVA's strength has been its relatively small size and character of its membership. Its members are, in effect, in the same boat. We all represent industrial or commercial businesses. We are involved in some form or another of audio-visual communications. It is easy to share in the knowledge and professional skills of other members because all members know each other personally."

Hall is married and has four children—two girls, ages 13 and 3, and two boys, ages 12 and 11. He has been devoted to athletics all his life, and is now President of the Washington Baseball League, which is a program that provides baseball for 1200 boys in his town. He also coaches a basketball team of 11 and 12 year old boys.

Gerry Hall is sometimes asked what is in the future of audio-visual technology. "In business communications," he believes, "there will be more and more use of the new microwave systems being proposed and in some cases already installed. Microwave offers low cost transmission. In addition, practical two-way audio and video will be achieved by the use of this system. It will be an ideal method of having sales meetings, business conferences, dealer orientations, etc.

"In other words, instead of bringing the people to the source, bring the source to the people. The savings in travel alone should justify the rather sophisticated production and playback equipment that is required in this type of system.

"Film will still be with us in the next decade. Low cost cartridge/cassette systems with magnetic sound are now on the market and will be improved. For small group meetings, individualized study, and points of sale, they offer many advantages.

"16mm motion pictures and 35mm slides are still the universal media. I believe they will continue to be in the next ten years. I also believe that their use will increase, but not at the same rate as the total increase in the use of audio-visual devices.

"When I look at the AV man today, Hall says, "I think that his current and future status has never been better. The needs for this expertise can only grow. We are living in a time of dramatic change—change in the world we live in, change in our own company's methods of doing business, and change in communication methodology and technology. The AV man who meets the challenge of these changes will be in a position to greatly benefit not only his own company, but our whole society." □

Visual communications attains its highest pitch of sensory excitement—and its lowest degree of intellectual communication—in the realm of multi-media.

As a consequence multi-media presentations enjoy enduring popularity. Unfortunately they have become the AV man's aphrodisiac. Multi-media permits him to languish for a time in the arms of Show Biz and escape the stern discipline of communication. Through the seductions of multi-media, audiences are titillated and beguiled. Things *seem* to be happening: viewers are impressed; management is contented; producers are fulfilled. But the enchantment with multi-media is gradually turning non-theatrical events into pure industrial entertainment. Technique is in control.

Through delight in the marvelous contraptions and gadgets now available, we are in danger of becoming entrapped by the spectacular light and sound shows that degrade the reputation of visual communications. It is my thesis that all too many of us in industry have undertaken the multi-media trip into the realm of sensuality: a realm that is by nature alien to intellectual perception. This indulgence has compromised visual communications in the interest of novelty and sensation. Multi-media tends to inundate thought with color and anesthetize the intellect with a riot of sound and frenzy of movement.

To willingly permit this to occur is to risk losing one's identity as a serious and effective communicator. Multi-media must be cautiously handled lest it turn a program into a carnival.

Every element used in multi-media is worthy, admirable, brilliant in itself—eminently capable of aiding the delicate, demanding process of communication. Used wisely, each in its own way has won substantial esteem. But joined together in the typical audio-visual tour de force that multi-media productions are inclined to become, they do mob violence to the senses. The result may be pleasurable, but intellectual communication is limited to the point of becoming incidental.

We are not in show business—we are industrial communicators. We deal primarily in information, ideas, and training—only incidentally in entertainment. If we can make our information and ideas entertaining—that is a capability of which we may be proud, but it must never become a primary endeavor.

If we sacrifice communication to entertainment, we imperil industrial visual communications as well as our jealously guarded reputations as ser-

Multi-Media: the Great Industrial Side Show

BY LEE COYLE

ious and effective communicators.

Far, far too often we have been guilty of producing pyrotechnic audio-visual displays that have left our audiences gloriously limp and vaguely conscious of having been present at a grand happening. But the abiding value and accomplishment of these programs tend to be elusive.

We take great pride in fantastic audience reaction—hearing viewers say "Wow! I've never seen anything like that before!" But when the audience is quizzed about the content, the substance of the presentation, it becomes swiftly evident that the medium has overwhelmed the message. Sensation has stupified communication.

Now, I well know that management is in general highly complimentary about such performances. I also know that management is not particularly adept at weighing values in the area of communication. Sooner or later, however, the judicious will perceive that multi-media is a bastard for whose survival depends on satisfying an omnivorous appetite for novelty, tricks, and truckloads of equipment.

Once a company embarks on a multi-media kick, it becomes temporarily addicted and goes down a pernicious trail of outdoing its previous production. The result is a lamentable series of outrageous experi-

AT CFI, OUR EXPERTS HELP YOU find many short cuts to great filmstrips. Working with you in the inception stage, they help you get the most from your material . . . often saving you time and money. And with our special facilities, we'll furnish the parts you might be missing. *A flower background? A line of hand lettering? Type set in cels for superimposure?* Can do. Our art talent will design and execute original frames for you, or we'll copy your flat art up to 24" x 32" (32 field). *Different size transparencies?* We shoot directly from 35 mm through 8 x 10, with no intermediate reduction to cause loss of color or detail. *Product to be photographed?* We'll shoot it into your filmstrip against a colorful background. And with all this service, at CFI you always get faithful color rendition with minimum contrast gain and frame to frame color correction to insure over-all balance. And our unique continuous-loop printing equipment insures absolutely uniform filmstrip prints from scratch-free negatives. *How long?* Well, normal delivery is one week. On super-rush jobs, we'll work with you to a tighter deadline. *Need advice?* Let's discuss your problems. Call Lou Livingston at HO 2-3161

Your filmstrip benefits from the superior facilities and technology that have been developed to meet the high standards of the motion picture industry.

If you would like more information about CFI's filmstrip capabilities, plus comprehensive price information, just fill in this coupon and mail to:

Is Multi-Media REALLY the Message versus the Medium?

BY KEN SACO

Multi-media programs, by their very nature, pose an interesting dilemma: Where is the point at which multi-media technique begins to compete with the message it is designed to communicate?

Although it is one of our most modern communication tools, the rules under which a multi-media producer operates are at least 300 years old. If we could exhumate a highly articulate spokesman of that era and ask him to act as our communications consultant, he might use these familiar words:

"Use all gently; for in the very . . . whirlwind of your passion, you must acquire and beget a temperance that may give it smoothness . . . Overdone, though it makes the unskilful laugh, cannot but make the judicious grieve; the censure of . . . which one must, in your allowance, o'erweigh a whole theatre of others."

This Elizabethan advice is quite relevant. Hamlet's actors, though lacking our electronic capabilities, still ran exactly the same risk we do today—the chance of overpowering their message with their medium.

Confusing the importance of message and medium is a failing that sometimes begins with the client himself. A corporate audio-visual director recently approached an outside producer of industrial shows with a request for a 10-minute keynote presentation for an upcoming sales meeting. "I'm looking for a strong impact," he said, "a completely new visual technique." Then he asked, quite seriously, "Do you have anything of this sort available off the shelf—perhaps a program developed for another meeting?" His total concern for the medium completely obscured any thought for the message.

I believe there is an important distinction that should be made between the message and the medium that carries it. Consider for a moment the message as something that need not necessarily require sound effects or music—or need not be pictorial—or need

not require even words. It can, theoretically, be non-pictorial, or non-audio, or non-verbal; it need not appeal to or reach us through any one single sense. We might conclude with some facetiousness that the message could very well be non-sense.

But this, though foolish sounding, does make a point—the message, since it can be carried by any one of at least three media—picture, word, sound—can be helped, hindered, or totally undone by any one or a combination of these.

We have all been subjected to interminable speaker whose words tediously overwhelmed his story. I can pair him with his opposite, who uses pictures or sound effects also overwhelmed his story.

The important consideration seems to me, is not a concern for many words, or too many pictures, too much sound; but a vital concern for the proper handling of these elements (and perhaps others like touch and smell as well) as parts of a whole—a carefully designed whole aimed

Eastman Kodak Company has recently presented a nine-screen program with a striking display of graphics. The spectacular is also available in a traveling square screen two-projector version that retains the overlapping look of the original.

Ken Saco, multi-media practitioner since 1957, together with partner **Curtis Lo** heads **Ken Saco Associates**, New York audio-visual and corporate communications company.

TEMA—Theatre Equipment Supply Manufacturers' Association—tells its "Why Go to a Movie" story with a pre-recorded two-projector overlapping screen show. It's portable, less expensive and more unique than a film. It's multi-media at its simplest.

aching clearly defined objectives.

Our industrial theatre needs practitioners who are at least as well skilled as their counterparts in the legitimate theatre, if they are to carry off their task successfully. Repeat performances may not occur week after week, but they certainly do occur year after year. The successful producer must bring his audience and his clients back to the industrial theatre from one year to the next, if he is to remain in business. He can succeed by cultivating a sensitivity for his multi-media tools and using them properly.

He must know just how much is enough and what proportions of information to blend with entertainment for each of the many occasions he is asked to fill.

He is somewhat like an adroit bartender, knowing the precise moment when the dry vermouth being added to the vodka magically transforms the mixture into something much greater than the sum of its parts. Knowing when the message and medium begin to compete for attention helps him keep the techniques used—visual, verbal, and aural—within certain limits of acceptance which in turn depend upon the audience, the occasion, and the surroundings.

There are two examples to suggest the spectrum within which the multi-media producer operates.

A projection screen that probably holds the world's record for overall size—one hundred and fifty feet in length—was specified for a recent program given by a corporate executive. The audience, about 1000 executives, were to gather at a luncheon meeting of the Executives Club of Chicago. The occasion required a visual program to support a major company executive,

one that would properly support his 30+ minute talk. The room measured 190 by 50 feet. The audience faced the dias which was parallel to the 190 foot wall.

Because of the unusual width of the room, at least two screens—one at either end of the room—would be needed for acceptable visibility. However, by covering the wall behind the head table with a single 150-foot long screen the visual program could be duplicated both left and right of the speaker (in content if not exactly picture for picture). In this way, only the half of the screen that could be comfortably viewed would need to tell the whole story. In addition the speaker could be spotlighted within the center screen, becoming a dominant part of his visualized story.

Slides, film, and sound were blended with 29 projectors to yield a highly memorable mix of message with medium. Overdone? Not according to those who attended. Others may feel differently, but there are some who feel that Beethoven's 9th is overdone, too.

At the other end of the spectrum, a program in point; a trade association representing the motion picture field needed to tell its own story through a medium other than film. The prior year's program used film. Something different was wanted. There was a further need for this program to travel and be available to association representatives who would give the program under conditions far from ideal—hotel rooms of varied sizes and facilities over the country. Slides seemed to be the answer.

The visual solution was a conventional two-projector program with a unique twist. By giving slides a wide two-to-one ratio a pair of projected

images could be overlapped to create the impression of three tandem square screens. The additional advantage of overlapping images on the center screen was available for novel effects. A pre-recorded ¼" sound track added dramatic dimension. The final product was a dual slide projector and tape program that told the association story simply with a high degree of effectiveness. Severe restrictions by multi-media standards. However, a broad exposure to country-wide audiences bore out the soundness of this simple format. In this instance, the answer to "how much is enough" became "very little is enough."

In sum, virtually any medium can overwhelm a story. A current Volkswagen commercial pictures their advertising manager looking for a singing commercial to extol the features of his product. The song and lyrics plugger (he couldn't possibly be a producer) in final desperation tells his client, "Lissen, ten 'tousand canaries whistling 'Bluebird of Happiness' couldn't help you." The commercial strikes a telling blow for the value of understatement, particularly where the product's virtue is itself understatement. This is an effective matching of the medium to the message, and it may well be the key we seek.

Perhaps we'd do well to listen to one more bit of advice from our 300 year old communications consultant: "Suit the action to the word, the word to the action; with this special observance, that you o'erstep not the modesty of nature."

Inspiring words—supported, of course, by staging, music, sound effects, actors, costumes, and poetry. Ah sweet multi-media, not always modest child of nature! □

ARE YOU READY FOR SUPER 8 PRODUCTION? IS SUPER 8 PRODUCTION READY FOR YOU?

Almost everybody is sold on Super 8 prints these days. It was a long haul to convince the scoffers and die-hards that the tiny little strip could really make a picture worth looking at on the screen. But nobody fights it any more. From the one man looking at a desk-top suitcase projector all the way up to a small roomful of people, Super 8 is proving itself to be more than satisfactory for industrial use.

But these are Super 8 reduction prints. Nobody—well, almost nobody—has any good words to say for going out and actually shooting the film in Super 8. "Look at all the problems," they'll point out, "no professional Super 8 cameras, no professional editing equipment, no satisfactory duplicating stock, no laboratory services designed for Super 8." Even such strong proponents of Super 8 as its originator, Kodak, have evidenced little support for professional Super 8 production—in fact, it has frequently looked like the great yellow box has actively frowned on the whole idea. "Sure, it's fine for film classes at schools and colleges, and it's ok for low budget records of football games, but if you want prints—forget it!"

Despite all the problems, there are a few producers around the country who are actually shooting in Super 8. One of them, Henri Wolfe, of

Sanri Super 8 Productions, Rego Park N.Y., has recently delivered a dozen prints of a very satisfactory ten-minute sales film to his client, Scholastic Magazine.

In this case, Scholastic was looking for some kind of visual media to use for individual sales presentations on its publishing supplement, Co-Ed, which binds into the magazine and is intended for high school girls. Although the subject, in this case, was ideal for motion pictures (it shows girls busy doing things with home ec materials), the budget was small, so Scholastic had originally planned to limit itself to a less dynamic medium. However, in discussing the problem with Planned Communications Services, of New York, which works with Scholastic on various communications projects, the possibility of an inexpensive Super 8 production came up, and Dave Black, of PCS, recommended that Scholastic give it a try. Sanri Super 8 was selected to undertake the production, which involved extensive location work at the Annual Home Economics Show in Denver, and in home ec classes in suburban high schools.

Sanri's Henri Wolfe has been a professional film production man for a dozen years. He has been a producer or production manager at such highly rated documentary and industrial production companies as Wolper and Visualscope, as well as in the TV

network division of ABC. At the same time, since his school days he has made sound films on his own hook in 8mm and Super 8 on various topics of social interest which he aroused a good deal of favorable comment amongst his professional associates.

When slow times set in for the production industry in New York in 1970, Wolfe set about establishing his own firm which could offer a low cost production but with professional quality. And after considering all the possible ways to deliver to his client the kind of films he wanted, he decided to take the revolutionary, and some thought, fool-hardy, step of producing in Super 8.

"Henri is a very innovative guy," one of his old associates says about him. "He doesn't always take the easy way to do things. In fact, the reason he can sometimes make films in what you might call the hard, round-about way, is that he works so hard at them—he's a terrific worker."

Wolfe figured that in the years to come it was absolutely inevitable that there would be a Super 8 production business. "Industry has a real need for films that will do a communications job with one-to-one audiences in sales or training situations," he says. "They will need a lot of these pictures over the next ten years—they won't be going out to spend \$20,000 apiece on them, as they have

Canon DS8 camera and Uher 4000 recorder are the key components in Henri Wolfe's Super 8 production equipment.

Henri Wolfe with custom-made Precision editing equipment.

Synchronizer interlocks Super 8 print (background) with 16mm magnetic film. Reduction gear insures frame to frame sync.

"Just because you're working in Super 8 does not mean you shouldn't use professional standard"

In the past. One hell of a lot of the production values we have given to industrial films in the last twenty years have been for our own egos. Audiences who have seen these values have put into the films don't really know the difference, but we've done that way mostly for our own sake. And, admittedly, the clients have paid them, too. But most clients are starting to count up the cost of the kind of production for certain types of films, and they just can't afford them any more. Mind you, I'm not talking about the big PR film for theatre and TV showings, I'm talking about the kind of picture you use to train an auto mechanic, or a computer programmer, or the neat, simple little sales film you can put in a suitcase projector."

But why Super 8? he is asked. What is more expensive about 16mm than Super 8? The best Super 8 cameras are not too unlike 16, and you've still got almost every other problem of motion picture production to work out—regardless of the format of the film.

Here is what Wolfe has to say: "For one thing, your equipment is less expensive and much lighter weight. You've got less overhead, less rental expense. It doesn't cost a fortune to buy, and you can operate it yourself, quickly and efficiently, usually with an assistant necessary. Raw stock cost is significantly lower. And workprint and release print costs are much lower.

Specifically, I use a Canon DS8 camera, which takes a 100 ft. roll of double Super 8 film. It's well-made, has its own gate, and you get 10 minutes of running time on one roll of film. That's equivalent to 365 ft. of 16mm film, almost a whole 400 ft. magazine. It loads fast automatically and you don't have to lug around heavy magazines.

"My raw stock, processing and workprint costs for ten minutes of film come to about \$40. In 16mm, it would be approximately \$90. When you are shooting 10-1, 12-1, as it infrequently happens in documentary work, these costs can definitely mount up.

"It all adds up to savings—savings on equipment, savings on crew, and savings on film. I'm positively convinced that on the small screen there is very little difference in quality between Super 8 and 16mm originated film and the viewer is not going to be able to tell the difference."

Here is how Wolfe works. He is now shooting Kodachrome II, although he makes regular tests on any other new stocks as they are introduced in Super 8 and DS8 to see if anything better becomes available. He is now testing 7252 which can be had on special order in DS8. The Kodachrome is developed by Kodak at Fairlawn, N.J. and then sent to KinOLux lab in New York for a one-light Super 8 color (7389) work print. This, and his sound tracks, are edited on a synchronizer custom-made by Precision Laboratories in Brooklyn which combines a French Muray Super 8 viewer ganged up with two 16mm magnetic heads so that a differential gear maintains frame to frame sync.

When workprint and sound are completed and approved, the original is matched to the work print. Wolfe does this by pure visual inspection, no edge numbers. "This is no real problem," he says. At each side of splices (there were 96 splices in the Scholastic film) exactly three frames are added to the original, so that what he has at this point is a matched original to sound-synchronized work-print plus six frames which will not be printed at each splice.

The original in this form now goes to Cineffects, a New York optical house, for a liquid gate blow-up with scene-to-scene density timing, to 16mm color internegative (7271) using a "zero cutting" printing technique in which the three frames on each side of the splice do not print. Wolfe has, at this point, a 16mm internegative with no splices showing, and an exactly matching sound track on 16mm sprocketed magnetic tape.

These go to Cine Magnetics laboratory for reduction printing with scene-to-scene color correction to Eastman color pre-stripped release stock. The prints, as we have previously pointed out, and as seen on Scholastic's attache-case projectors, are entirely satisfactory.

Henry Wolfe is asked some questions: *If you believe that strongly in Super 8, why not print directly from Kodachrome to a Super 8 color reversal stock?* "The main reason," Wolfe says, "is that you'd have to go from a "B" wind original to an "A" wind print, which will not take a magnetic stripe as well—it just won't adhere properly. I also think that the quality is better doing it this way, although you'd be surprised how good the KinOLux 7389 one-light work-

prints turn out."

How about the physical problems of handling all that 8mm spaghetti? "We heard the same thing when editors went from 35mm to 16mm," Wolfe says. "Super 8 is actually easier to edit than 16mm, and believe me, I've handled many thousands of feet of both. There is an orientation you have to go through. Everything is compact—small reels—you can stick things on the editor in two seconds. I think I gain two days for a typical film on cutting in Super 8 against 16."

There are other short cuts you could make—use one of the new sync systems, make your own mixes—why not? "Just because you're working in Super 8 does not mean you shouldn't use completely professional standards," Wolfe says. "I don't believe in Rube Goldberg devices, and that's what some of these amateur sync systems are. I do believe in letting the labs and service houses do the things they do best—it's foolish for the professional film worker to try to compete with them."

Your Scholastic film had no lip-sync. Would this be a problem to you? I don't see any problem at all," Wolfe says. "I've been so busy I haven't got around to it yet, but there is a simple modification in the Canon you can get from Greg Valteri in California to provide a sync pulse generator and automatic slate and you can then work with any of the familiar recorders: Nagra, Arrivox, Uher. My custom-made Precision Labs synchronizer then gives me exact frame to frame lip sync.

So, it looks like we've now got another way to make industrial films. Whether the system proves itself in practice as well as in the claims Henri Wolfe and a few other pioneers make for it remains to be seen. It is true that hardly a month passes without another new piece of equipment coming on the market to fill up the holes. The day may soon be coming when Super 8 production can no longer be ignored.

As we pointed out in the title to this article: *Are You Ready for Super 8 Production?* The answer depends on what you're looking for, what kind of film you're planning. In other words, it is "Maybe." *Is Super 8 Production Ready for You?* The answer seems to be: "not quite yet", unless you're willing to improvise, to find new solutions, as Henri Wolfe is now doing. □

Readers of several of the leading electronics magazines last fall were startled by a full page invitation to a private screening of "The National Semiconductor Memory Seminar Film." (see cut.)

The idea back of this wonderfully raffish illustration was the perfectly serious purpose of getting serious electronics manufacturers to look at a highly technical motion picture about a new line of solid state memory devices.

Reading further into the three-page ad it developed that the "Memory Seminar Film" was an "informative, no-holds-barred, no b.s. look at the past, present and future of semiconductor memories." Free crackerjacks were offered, and one of National Semiconductor's best application engineers as "projectionist/answer man in your own private office."

Before a week was out National had 30 direct responses and had succeeded in getting into several large companies never before penetrated.

In planning the campaign to establish its memory devices as the wave of the future, National Semiconductor Corporation (Santa Clara, Calif.) turned to film as the most credible way to demonstrate dramatically what the company's memory capability product line could do. Basically, two types of "memory" devices are on the market today. "Core" which is a mechanical type of storage device, and "semiconductor" memories, which are electronic. Core has been around longer and is cheaper per "bit" (the unit used to describe memory storage capacity). The more sophisticated new semiconductor memories seek to replace core in many applications. Hence, it is very important to National to start promoting their memory devices now.

The film National is using is an edited version of a very technical taped seminar which gives the company's philosophy of memory design and describes many products in great detail. It was transferred from a color videotape master, produced by Videotape Enterprises of Hollywood, before a live audience in a large studio.

Twenty 16mm prints were made and all of National Semiconductor's Field Applications Engineers are using it. Some of them would like the film to be more technical and some more humorous, all of which proves that it's hard to please everybody. But they all agree that it makes their jobs easier.

The ad, which was planned and written by National's agency, Chiat Day, Inc. (Los Angeles) has received a great deal of favorable comment in

You're invited to a private screening

the electronics industry (with some scattered criticism from women's lib groups protesting the exploitation of women in the ad). It was prepared by Chiat/Day's creative team of Jay Chiat (Creative Director), Hy Yablonska (Broadcast Director), Jerry Box (Art Director) and Tom Groener (Copywriter). Jim Brady is Account Executive. Assisting at the client level were Floyd Kvamme (Director of Marketing), Gene Carter (Integrated Circuits Marketing Manager), Dale Mrazek (Manager Digital Systems

Applications) and Chuck Signor (Advertising Manager).

Over 60 clipped coupons have been received thus far as a result of the ad. This is considered to be way above par for this type of upper-level, highly technical readership. National has done seminars before but not on film or tape. Obviously, new visual communications media will be called on in the future. The current film is now being dubbed for use in Germany, France and other European countries. □

get 16/16 interlock projection at its best!

LOOK FOR: ☐ **DUAL MAGNETIC TRACKS:** Switch-selected 200mil edge or 100mil center tracks on 16mm full-coat magnetic film for maximum utility and versatility. ☐ **FILM-END/FILM-BREAK SWITCH:** For greatest safety of valuable 16mm prints. ☐ **600 OHM INPUT/OUTPUT:** To match the impedance of audio lines and studio equipment. ☐ **TIGHT LOOP THREADING:** For fast, easy film threading and precise, consistent location of magnetic film sync point. ☐ **DOUBLE FLYWHEELS & MOTOR DRIVEN RUN-UP:** For improved flutter and wow performance; and for fast stabilization of double system sound.

We've listed just a sampling of the important new features of the Sonorex 16/16 Interlock Sound Projector. They are representative of dozens of improvements and new facilities that make 16/16 sound projection better than ever.

Use it for: Single and/or double system sound projection; optical playback; magnetic record and playback; mix, transfer and re-record — Sonorex is the one that does it all — and does it all better. Sold and serviced by the company that pioneered portable 16/16 interlock sound projectors in the USA. At authorized dealers.

COMPLETE LABORATORY SERVICE FOR 16MM / EDITING / RECORDING / WORK PRINTS SUPER 8, 8MM & 16MM RELEASE PRINTING / TITLING 35MM SLIDE AND FILMSTRIP SERVICE

Video is Versatile at Foxboro

Foxboro Company video camera operator focusses in on Research Center for segment of taped plant tour.

The Foxboro Company, world's largest manufacturer of industrial instrumentation equipment, started using videotape recording in customer forums at the company's headquarters plant in Foxboro, Massachusetts several years ago. John Olsen, Audio/Visual manager, describes what led the company into its first investment in VTR equipment.

"We felt that it would be useful to take our guests on a tour of our manufacturing and research facilities but we were concerned because of the restricted nature of some of our operations. Our local audio-visual dealer suggested that we videotape the tour, omitting the restricted operations. It worked out great—our guests had a guided tour, via videotape, of our plant. An additional advantage was the fact that production was not interrupted by a large group of people."

With this initial and highly successful experience behind them, Foxboro people started exploring additional uses for the video equipment. An excellent application was found in their use of videotape recording in public speaking courses for management. Ed McCarthy, Manager of Public Relations, says, "We have found that the best way for an individual to improve his public speaking ability is for him to see and hear himself as others do. In most cases the individual can readily spot his deficiencies and correct them himself."

"Another big advantage the videotape technique offers to the public speaker is that he can self-evaluate his performance. It is often difficult for an instructor to tell someone that

he can't speak well. There is always the problem of insulting the person without meaning to do so or discouraging him from coming back to another session. With the tape, the speaker finds that seeing is believing and there is nothing personal involved.

"He can examine his choice of words, thoughts, gestures, and facial expressions. Once he knows those basics and watches himself, it alerts him to all he wants to know and helps to guide him into making a better performance the next time around. This can't be achieved with just audio tape, because the speaker doesn't get the opportunity to see himself. It's this visual aspect that is so important. Combined with the audio, the visual aspect offers the speaker a total picture."

In summing up the effectiveness of video recording, McCarthy added, "In eighteen years of teaching public speaking, I can honestly say that no other method or technique even comes close to videotape recording as a teaching medium."

New product demonstrations

Among the many uses for videotape recording at Foxboro are new product demonstrations. An example is a new tooling process or process control computer which must be demonstrated with an oscilloscope. Oscilloscope patterns are videotaped at Foxboro and sent to a regional office where selected customers are invited for a demonstration. According to John Olsen, "Our Sony equipment is compact and light enough that one man from our training staff can easily

handle the equipment and put on a full presentation anywhere in the country."

Training for sales calls

Another good example of how Foxboro uses the video equipment is in training its sales force. One of the problems the company faces is getting a sales message across—quickly and effectively. Since the products produced at Foxboro are technical and often complex, the salesman's skill in demonstrating the product to the buyer, making sure that the product meets the customer's needs, and convincing him how easy it is to operate the product takes real skill.

To help achieve these aims, Foxboro puts its salesmen through a course of role playing. Here, two Foxboro salesmen act out a typical sales call with one salesman playing the part of the seller and the other the part of the tough customer. During this entire simulated sales call the action is videotaped.

After the two act out this typical sales call, the videotape is played

Camera operator lines up for shot of Foxboro newstape production.

group, which consists of about Foxboro salesmen. The two, who've worked out the roles, as well as the other salesmen, see whether they did a good job of selling or failed. All of the salesmen eventually get a turn at role playing.

This routine makes the salesman very alert to his mistakes as well as the good points. It also gives him an instant look at how the situation might be improved and it allows his fellow salesmen to question and give their comments. These comments are often beneficial and help the salesman when he is out on an actual call.

New equipment was selected

Before selecting any VTR equipment, Foxboro investigated a number of systems available on the market, reports John Olsen. "We felt that the two outstanding points in Sony's favor were price and service. We were looking for a manufacturer that had the capability to help train our people and assist us in setting up our department. In addition, we were interested in equipment service should it be required. As to cost—we felt that we could set ourselves up with a Sony camera, videotape recorder, and playback unit and get ourselves in business at a minimum cost. Of course, we have greatly expanded on this original

The technician uses special effects generators during tape production. Starting with all, Foxboro now has sophisticated production equipment.

A package of equipment to meet the many new uses we have found for VTR. At this point we have five cameras and a full complement of studio equipment so that we can do very sophisticated editing, split screen presentations, fades, and a variety of other professional jobs."

Some other possibilities

Aside from these applications, Foxboro is also testing out new ideas for video equipment use. For example, the company is looking into the feasibility of sending out news messages via the videotape recorder. This might consist

of a monthly news tape with current topics of interest from the president, vice president, or head of marketing. It might describe competitive new products that hit the market, important situations that the company's regional manager should be aware of and in turn perhaps, inform some of the salesmen in the field.

The message might also be just several two-minute segments of news items developed around the company and its activities. It can be added to some commercial company message from the company president, treasurer, or vice president. Foxboro is trying this idea out currently and if it meets

with positive results will consider it as a possible house-organ substitute.

With this approach, actual models, sketches, and diagrams can be used to get the message across completely and quickly. Foxboro records it today, and it is in the proper hands tomorrow.

What has impressed Foxboro management all during its experience with videotape is that the system becomes more and more versatile each year. What began with a simple plant-tour substitute has developed into one of the most valuable sales, training and internal communications media in the company. □

Through Darkest Africa with Lens and Camera

BY JOHN SAVAGE

For the tourist, going through customs overseas is a simple process. The American passport, the sincere smile, and you've usually won yourself the little chalk-mark on the luggage that shows you passed the test.

Ah, but try to waltz through with ten cases of photographic and sound equipment, which is the way I travel...

A common sight at airports around the world these days are the film-makers. Groups of sweating, worried-looking men and women are perhaps even at this moment struggling to load shiny metal cases into the micro-Renault, or mini-Fiat, or whatever other transportation is the last thing available for rental at that particular airport.

But by and large, in spite of the occasional frustrations, these people enjoy their work. And by and large, other people envy them.

There is much to justify their envy. To be sent around the world on interesting, challenging assignments, to work with glamorous models, stay in the best hotels—all expenses paid by happy, smiling sponsors—could there be a better way to earn a living?

I was having a conversation with a friend a few weeks ago. When he learned that I had five different assignments last year—assignments that took me during the months of May and June to thirteen European countries, then a month in the Black Hills of South Dakota during July, then back to Europe in August for a month on Lake Konstanz, all of this followed during the winter by a trip to Africa and another one back to Europe—he blurted out, "It's the most fantastic job I've ever heard of!"

If he only knew the truth. For the truth is—he's right. There is nothing quite like the job of the film-maker

today. You get sort of casual about it. You get so you fly in and out of Orly, or Haneda, or Arlanda, the way you change at Stamford.

Well, not *quite*. They don't have customs at Stamford.

It was Shakespeare who wrote, "Age cannot wither, nor customs stale..." And even if I don't have it exactly right, it shows he must have known what it was to go through the *douane*, or *zoll*, or whatever else they called it back in his day. He knew going through customs was an experience of infinite variety.

After you've spent fifteen years in the film business, you get, as I say, sort of casual about it. But whenever you feel you're getting bored in a given country, the little men in the weird uniforms are waiting out at the airport to wake you up.

If you're making a film in that country, you've got to go through customs to get in, and you've got to pass them again when you leave. And the wonderful thing about customs—no matter where you are in the world—you never know what's going to happen.

The reason things happen is the basic lack of trust. It's depressing to me to realize that they went through their ninety days of training school being warned especially about one sort of person, and it turns out to be a

They honestly feel all this equipment is being brought into their country to be sold to someone at high price. They firmly believe I plan to stand around on street corners with the "P'sst—feelthy postcards" character, trying to get rid of a hot Arriflex.

The customs service, in any country you care to name, is an official organization of considerable importance. Usually it comes complete with some sort of Captain Midnight uniform for the men, a little pennant hanging up on the wall, and a Latin phrase for the stationery—something like "*Eos Bene Saturate*" ("Soak 'em Good").

And when I say it sometimes takes days to go through customs, I do not exaggerate.

The following exchange took place last year in a German-speaking country—but that doesn't pinpoint it, does it? I mean, it could have been Germany, Austria, or a couple of other places.

"*Guten morgen*," I say. I speak fluent German, as long as it stays at this level.

"*Guten morgen*," replies the customs officer, who you would swear is Sig Rumann in an old Marx Brothers movie. He has a broad smile. Customs officials smile a lot, when they know they've got you.

I explain, at a somewhat slower pace, due to the dismaying intricacies of the language, that I have come to pick up my ten cases of equipment. I hand him official-looking documents. He stamps it with official-looking

The author, hat in hand, gamely awaits custom inspection.

mp and gives it to official-looking
nky. Flunky wheels in equipment.
"Alles ist in ordnung," he says.
ome back Tuesday and you can
ve it."

"Tuesday!" I cry. (I actually cry
"ienstag!" but if you expect me to
te an entire conversation in mis-
e-free German, you're asking more
n I can deliver.) "This is Friday!"
Another broad smile. "The man
o must sign his left, since it is late
day afternoon. He does not work
aturday or Sunday. Monday, of
urse, is a national holiday. Come
back Tuesday and you can pick it
up."

So I go to the hotel and spend four
days running up the expense account.
I had hoped to hire people and have
an entire sequence completed over
a weekend. The production sched-
ule is of course shot to pieces.

Usually, however, the problem is
money.

Some years ago, I arrived in a major
European city, bright-tailed and bushy-
tailed, ready to go to work. Getting
my gear through customs took all of
the day. This was a French-speaking
country. (Again, that doesn't narrow
it down too much; it could have been
France, Switzerland, Belgium, or one
of thirty other places.)

I like to think that things took so
long because I speak French with a
perfect Parisian accent—the kind you
acquire at a Los Angeles high school
and they therefore had a hard time
understanding me, not being from
Paris themselves.

But actually the main hangup was
money. They wanted to know the
actual value of the equipment. I fig-
ured it about half the actual value
would be the prudent thing to do, so
I told them six thousand dollars. They
then wanted me to put up six thou-
sand dollars cash as a bond to make
sure I brought the *matériel* out again.
Six thousand dollars! That would take
a considerable chunk of my produc-
tion money. Pleading, shouting and
writing a portion of "Le Cid" (which
I had committed to memory years
before in French IV) made no dif-
ference. If I wanted the stuff, I had
to come up with the six grand.

They then took the six thousand,
inverted the travelers' checks into
local currency (for which transaction
I had to pay) and put it in a bank.
When I wanted to leave the country a
month later, it turned out I could not
leave from a different city as I had
planned; if I wanted the six thou-
sand, I had to leave from *their* city.
When I got there, they deducted cus-
toms charges and a number of other
difficult-to-understand fees and then
inverted the money back into dol-
lars, for which I again had to pay. I

took the remaining change and left.

Today we have the carnet—a sort
of international bond—which means
you don't have to put up large amounts
of cash any more. But it's the variety
of the customs experience that still
makes it challenging. In Lisbon, they
spend a solid morning adding up fig-
ures for customs charges and then
present me with a bill for the total—
which comes to \$2.38 in US money.
In Denmark, they charge me nothing,
but before letting me through, the
customs officer tells me a joke. (All
Danes know of the success of Victor
Borge and will tell you a joke im-
mediately upon learning that you're
an American.) At the Swiss-Austrian
border, they tell me I must leave the
train so they can examine the equip-
ment I'm carrying with me. As soon
as I get all my gear out on the plat-
form, the train leaves. I wait there
on that platform for *ten hours* till the
next express comes by with room for
me and my ten cases. In one African
country, someone from the customs
office calls me daily at the hotel to
tell me that my equipment has ar-
rived via air freight. I reply that I
know, I have already checked it
through customs and have it with me
in the hotel. The next day, someone
else calls to say the same thing.

The other problem with customs
is created by the box of film you

bring with you. This is not something
you slip in a suitcase; if you're shoot-
ing 35mm, the box is as big as a suit-
case itself. Now surely the customs
men should realize that, if you're
there to shoot a film, you've got to
have some film to shoot. But there
is something about a sealed box—a
box that cannot be opened—that goes
against everything they believe in.

If it's unexposed, your average
customs man displays an intense de-
sire to open it all up and examine
each roll to make *sure* it's unexposed.
If it's exposed, he's hesitant about
letting you go with what he is sure
is disgusting pornographic material.
Either way, it means a couple of more
hours waiting around the customs
shed. And speaking of waiting around,
I hope some day to have explained
to me the reason why only one man
in the entire customs service has the
authority to pick up that rubber stamp
and make the impression on the rele-
vant piece of paper—and it's usually
his day off.

One sits down to play the customs
game with trepidation; it's a game
they usually win. As I say, customs
services often have an official latin
phrase on their stationery. They all
have an unofficial one, too: "*Omnes
Chartas Tenemus*" (We Hold All the
Cards"). □

A/V programs sparkle and come alive... LA BELLE 3-WAY* COMMPAK CARTRIDGE

Continuous loop 16mm filmstrip and magnetic sound tape permanently synchronized and combined in a single cartridge. No rewind — no turnover — instant replay! Fast sequence animated scenes suggest motion, with the economy of slide films. Up to 250 visuals plus 20-minute audio. Existing slide/sound programs easily adapted. Cartridges interchangeable among LaBelle Series 16 "audience-rated" projectors:

- *1 LA BELLE COURIER® 16 (shown in illustration) — Portable attaché case style. Take to audience for personalized communication. AC operated.
- *2 LA BELLE SENTINEL 16 — Self-contained. Looks like a table television set. Cartridge slips in front for instant program changes. Ideal for displays, small groups or carrels.
- *3 LA BELLE TUTOR 16 — Projected image. Ideal for groups, meeting rooms, etc. Lightweight. Retractable handle. Clear images and crisp, convincing sound.

Audio-Visuals in a Large Way at BOAC

A decade ago, the term audio-visual was virtually unheard of at British Overseas Airways Corp.

One of the biggest international air carriers—its world-wide passenger and freight route network adds up to 300,000 miles—BOAC has since plunged into audio-visual operations in a large way.

Explains Tip Pyle, who as BOAC's USA public relations manager oversees all facets of media communications:

"In the early 1960s, our London head office PR management decided that more intensive audio-visual support was needed for the sales and marketing force, to help them fill passenger seats and cargo space, and to promote our corporate image.

"Until 1963 or thereabouts our relatively limited (by today's standards) film and photographic efforts consisted of supplying routine pictures for publicity purposes; and we had one lady coping with a few films, both their production and distribution.

"PR Management, guided by consumer research and noting technical development in transparencies, slides and other visual aids, decided to establish a full-fledged audio-visual branch. An expert—Mr. Ian Mackersey—was chosen to set up the department and he was given the necessary tools and staff. We were soon in business in a modern, truly effective manner."

Films, sound filmstrips and sound slide presentations are the principal weapons in the airline's audio-visual arsenal.

Films comprise (1) those about BOAC and (2) travel inducement subjects featuring resort and other destinations served. The productions include foreign-language versions for special needs. These range from Ja-

pinese to Latin-American Spanish.

Pure BOAC films include major general interest documentaries, short news films, TV newsclips about such developments as automatic landing or the opening of new routes, and educational information films on specialized subjects.

To promote BOAC's introduction of the giant 747 jet, for example, the department made a mood film featuring spectacular air-to-air footage of the new airliner.

On the travelogue—or "travel appetizer"—front, the branch has in production or recent distribution 20-30 minute films on East Africa, the Bahamas, Britain, New York, Eastern Caribbean and South Seas.

Educational films on the training of pilots and in-flight services are also in distribution worldwide.

"Consumer and market research are playing an increasingly important part in the shaping of our productions," commented Pyle. "We have decided, for instance, to eschew non-commentated films in favor of commentary and strong BOAC identity. Market research has revealed this to be the right policy, although the commentary policy lessens the likelihood of TV or cinema showings."

Research also has indicated that

showings of films to groups—such as travel agents—by the field sales force produce a favorable reaction; 92 percent of these viewers found the BOAC films "useful" as a sales aid.

Distribution of films on loan to the public is handled by BOAC sales and in 15 countries by commercial libraries. Print order to supply an outlet, plus the requirements of BOAC PR and sales staff who arrange their own shows, can run to 160 copies per title. In all, there are some 3,000 copies of BOAC films in current circulation world-wide.

In the USA alone, 12 titles on 16 mm sound color are distributed by Modern Talking Picture Service Inc., New York, reports A. I. Turkheim, who serves under Pyle as BOAC Audio-Visual Supervisor, USA.

Sound filmstrip or sound-slide presentations are considered the most effective hard-sell medium used by BOAC. The current filmstrip production and distribution program covers incentive travel, cargo facilities in the USA and conventions in London.

For the International Air Transport Assn., the department produces "Tomorrow Is Today." It's aimed at governments and airport authorities everywhere, to show the type

A. PALMER FILMS, INC.
1000 MARKET STREET • SAN FRANCISCO, CA 94105
San Francisco's complete 16 mm film service

ground handling equipment and facilities required for the jumbo 747 jets.

And each year is produced a new version of "This is BOAC," a PR sound filmstrip demonstrating the vast scale of the airline's operations. It's seen by all official visitors to BOAC's London Airport headquarters and by all incoming commercial trainees—a total of 14,000 people per year in Britain alone.

Also, production has started on a staff communications filmgraph, called "BOAC and You." Its objective is to show staff the functions of top management and the role filled by each division and department in BOAC's global operations.

BOAC regularly participates in TV and feature films by providing shooting facilities for film crews. One such occurred last year when David Frost filmed a complete show aboard a 747 jet.

The carrier maintains in London one of the most extensive aircraft film libraries extant; object: to obtain BOAC identity in other organizations' film productions. It contains 14,000 feet of 35 mm color master film. Each of the 660 cine shots is listed and described in technical film terms in a stock catalogue available gratis to producers.

A still picture library is also kept up. It carries 65,000 negatives and color transparencies.

Black and white photos and transparencies from the still library are available in the USA to editors on request. Easy reference to what is obtainable is made by lithosheet books kept in the New York office.

To fill USA TV and film requests, BOAC maintains a well-stocked library of standard motion pictures including color and black/white footage of its airliner fleet.

To assist BOAC USA sales staff with film presentations, Audio-Visual Supervisor Turkheimer supplies Kodak Carousels and LaBelle Courier portable projectors. Here, filmstrips become tools in face-to-face selling situations—the Couriers are deemed especially handy when salesmen talk to travel agents across the counter. Front projection equipment is employed for shows to larger groups of agents or potential travelers.

To ensure that the USA sales force make optimum use of audio-visual equipment, a program of training—conducted yearly by Turkheimer in New York—has been instituted. Demonstrations are given with the latest equipment and in the standard slide and 16 mm sound projections systems. □

Available to Business and Industry for the first time

"MUSI-QUE"

A Complete record library of back- ground music and sound effects

*Ideally suited for Business
and Industrial use, such
as training films,
slide shows and other non-
theatrical presentations.*

Included are main and end titles
and various moods such as:

- Documentary • Light Comedy
- Sports • March • Outdoor

"FILM? ON MY BUDGET?"

Health and social service PR executives discover ways to stretch tight budgets.

"HOW LONG SHOULD A TV SPOT BE?"
"Can't I just use the photos in my files?"

"How do I go about finding a film producer I can trust?"

These and many other questions were fired at filmmaker Ed Schultz at the October meeting in New York of the Community Agency Public Relations Association. CAPRA, an organization of nearly one hundred public-relations professionals in the health and social service field, had invited Schultz, president of Cinemakers, to address the group. Assigned topic: "Film on *Your Budget*?"

In response to his opening question, "How many of you are already users of the projected media?" the majority raised their hands. When they were asked, "How many of you would like to use these media?"—all hands shot into the air.

Budget problems faced by the social service PR executive are formidable, and many agencies are forced to put together their own simple audio-visuals. At the same time, they are very much aware of the drawbacks of these less-than-expert efforts, and are anxious to learn what a professional filmmaker might be able to do for them without a tight budget.

To illustrate what *has* been done, Schultz began by screening a sampling of films and TV spots created and produced by Cinemakers for such sponsors as Planned Parenthood, the Community Service Society, Girl Scouts of the U.S.A., and Junior Achievement, plus a special short noncommercial film produced for J. C. Penney. The presentation was divided into "pur-

pose" categories: films used to recruit, to raise funds, to build an image, to inform, to provoke thought or discussion. All, the audience was told, had been produced on budgets ranging from \$3,000 to \$12,000.

A lively discussion ensued.

"Too often, Schultz warned, "a film is made just because someone says, one day, 'We should have a movie!' So a movie is made. After the board of directors sees it, it's filed on a shelf somewhere. The trouble is that such films are often made with no clear idea of purpose or audience. Money that *could* have been invested in *effective* film communication has been totally wasted on something that no one sees."

With that declaration, he invited questions from the audience. They came thick and fast. Excerpts from the exchange follow.

"What kind of help can the professional provide in that area?"

Schultz: "Part of the producer's job is to help you define your message, to determine what audience you should be reaching for, and to help you put your message to that audience in the most effective and economical way. For agencies such as yours, public service television time is an ideal medium by which to reach a lot of people directly, succinctly, and economically."

"What lengths are best for TV spots? Which stand the best chance of being used?"

Six-minute thought-provoker for J. C. Penney elicited great interest at CAPRA meeting. Technique of a high ration of stills to live action is often, but not necessarily less expensive, Ed Schultz told the group.

ve talked to several producers, and each one estimates a different cost—I mean REALLY different—for the same project! How come?"

Schultz: "In New York City, and probably in other metropolitan areas as well, there seems to be an increasing preference for 30-second and 20-second spots. This is not yet true around the dial, though; some channels still ask for 60s. In the case of the latest series of patient recruitment spots we created for Planned Parenthood, I recommended the 30-second length. The spots were produced in both English and Spanish-language versions; some stations are running an English 30 back-to-back with a Spanish 30 to fill a 60-second time slot.

Since the demand does vary, it's helpful to make a few phone calls to the stations; this will give you an up-to-the-minute idea of the most-wanted lengths. If you can afford it, your best bet is to provide the stations with spots of all the standard lengths—60, 30, 20, and 10. Then, whatever time slots become available, you're ready. It's often possible, I might add, to derive several spots, of different lengths and even with different visual content, from one shooting schedule."

"I've been hearing about half-inch videotape for television spots; should we be thinking about that?"

Schultz: "It's too soon, I think, to make a case for the less-than-two-inch videotape format. Production on videotape widths less than the two-inch standard usually means transferring to one-inch, or to film, before most stations can handle it.

What the near future *does* hold in store, though, is a TV role for Super 8. Television is moving quickly into Super 8 for news broadcasting. The reasons are obvious: the equipment is simpler and less expensive, and shooting in Super 8 uses about half the amount of film that 16-millimeter does. A network covers thousands of news events each year; a lot of film is exposed, a good portion of which never gets on the air. You can see the savings in film stock and developing costs represented by Super 8."

"Does that mean TV stations will accept Super 8 spots?"

Schultz: "No, not yet; maybe never. At this point, the use of Super 8 is exploratory, and limited strictly to the news area. But it stands to reason that they're equipped to broadcast news on Super 8, they're also equipped to use Super 8 for other programming. If they want to? We'll have to wait

and see."

"That J. C. Penney film you showed us used a lot of still photographs. Is that less expensive than live action?"

Schultz: "It can be, but not necessarily. Flying to Antarctica to take a still picture of a penguin is far more costly than shooting live-action movies of a child on a swing in Central Park. The expense depends on *what* you're shooting, and *where*. Maybe you have a lot of great stills in your files, and you figure a movie could be made incorporating them. Remember that they

"Want time to become yourself before you become a parent?" Planned Parenthood TV spot produced by Cinemakers.

must still be photographed onto motion picture film, which costs money. Using stills *can* be less expensive than live action; let me put it that way."

"What is that process called, putting still pictures on movie film?"

Schultz: "It's been called by a number of names, including photomation and iconography. We call our method 'cinemation'."

"Were the stills for that J. C. Penney film all available beforehand? Where did you get them?"

Schultz: "In this case, the concept came first, and pictures had to be found to suit the script. Carol Hale, our writer, had to do extensive research to find just the right stills. Some were purchased; others were shot especially for this film; still others were loaned to us by corporations and by organizations such as yours. And some did come from our client's files."

"Would more live action have increased the cost in this case?"

Schultz: "Yes, probably. But the use of stills was dictated here mostly by the subject matter and the fast pace of

the film: the use of stills enabled us to achieve certain effects that would have been difficult, if not impossible, with live action. Our overall design, in turn, emerged from consideration of many factors—the purpose of the film, its intended audience, and budget."

"We produce our own audio-visuals—and for less than what you said the films you showed us cost. Our films haven't won any awards, but they've done a job for us. Our problem is that now, we're thinking of a special project that will need a more professional hand. I've talked to several producers, and each one estimates a different cost—I mean REALLY different—for the same project! How come? Is the high bidder out to rob me, or is the low bidder incompetent, or what?"

Schultz: "No names, please. Seriously, estimated cost of what is essentially a creative product can vary—quite legitimately. Ask several architects to build you a home, and I think you'll hear quite a variety of estimates—even if each architect proposes to use the very same quantity of bricks, or lumber, or whatever. The same thing applies to film."

"The only way I know to find a producer is to do what you've been doing. Talk to several, and see what they have to say. Ask yourself if they seem to understand your goals and problems, if you like their approach, if you'd enjoy working with them as people. Take a look at their work. Get the names of the people they've produced films for. Call those people, and ask if they were happy with the way the producer performed for them, and with the end product. When you've settled on a producer you feel you can have confidence in—artistically as well as business-wise—tell him the kind of budget you have, and let him design a film to do the best job possible within that budget."

Commenting on the meeting, Schultz told BUSINESS SCREEN: "The specific questions asked by this group may not all be meaningful to all film users and producers. But this session clearly indicated that the health and social service agency PR executive is vitally interested in more effective communications—and that he is eager to know more about every aspect of film, from do-it-yourself techniques and equipment to finding and working with the professional producer." □

REVIEWS AND PREVIEWS OF NEW VISUALS

Advertising Truth vs Hype

Good Goodies is a short (4½-minutes) non-narrated, animated film which could be a great opener for business meetings. It's a whimsical story of two "goodies" trucks trying to outdo each other by advertising with more and more superlatives until one truck is crushed under the weight of its own advertising signs.

Primarily designed for college and

high school social studies classes, *Good Goodies* has some provocative nuggets of thought which should provide marketing people with a good laugh at their own foibles.

The film is available for sale from the producer, Stephen Bosustow Productions, West Los Angeles, Calif., for \$80.

Students Study Liquor Like Three R's in New Control Board Film

While a tenth-grade student, like an indulgent cop on the beat, tries to move him along, Ferdinand makes a feeble effort to get to his feet and collapses into a helpless little bundle on the lab table.

Ferdinand is drunk.

A white rat not commonly given to tipping, he is used by high school actors to illustrate the effects alcohol can have on the body in a new motion picture called *Let's Study Alcohol*.

The 25-minute color film, in which students in a Philadelphia-area high school research and discuss beverage alcohol as they might an other subject, was developed by the Pennsylvania Liquor Control Board for use in the secondary schools.

Liquor Board Chairman William Z.

Scott said he hoped that all of the more than one million secondary-school boys and girls in the state would get to see the film and that it would help them in making a decision to comply with the laws that prohibit drinking by young people under 21.

He added that the film might well be used with good effect in the schools of many of the other states.

Let's Study Alcohol was produced by Ralph Lopatin Productions, of Philadelphia. It was directed by Michael Levanios, Jr. and written by Franklin P. Jones.

Challenges Met and Obstacles Overcome

The Lockheed 1011 has been dogged with monumental problems ever since the possibility of the aircraft was considered six years ago. During its odyssey from the drawing boards in 1966 to its type certification now scheduled for April this year, the aircraft has seen the bankruptcy of its engine manufacturer, Rolls Royce, the almost bankruptcy of its prime manufacturer, Lockheed Aircraft. Yet, as a new film, *No Simple Thing*, shows, the L-1011 has been saved by government action—"technological good citizenship"—and will hopefully soon provide another quiet, clean comfortable aircraft for the benefit of short-haul air travelers.

Eastern Airlines, which is a major customer for the L-1011 (it has ordered 50 of the first 168 aircraft scheduled to be built) has sponsored the new film. It is expected to be seen by millions of viewers during 1972 in theatres, television and non-theatrical group showings.

Lockheed 1011 Whisperliner about to go into service for Eastern Airlines.

The film portrays the behind-the-scenes activities that have gone into the building of the 248-passenger tri-jet, the challenges met and obstacles overcome. In production (by Vision Associates, New York) for almost two

years, *No Simple Thing* tells its story through the voices of many of the assembly workers, engineers, pilot, airline executives, government officials and others who helped design and build the L-1011.

Distribution of the 28-minute and 14-minute versions of the film is by Association-Sterling Films.

Herbicide Spray System Controls Weeds, Protects Environment

Patterns of Drift Control, a new film now being shown to customers and prospects of Rhodia, Inc.'s Chipmunk Division, shows how the company's mechanical inverter system forces herbicide and water into a thick emulsion, crowding large amounts of water with small amounts of oil to behave like a plastic.

The film shows how three years of testing hundreds of formulations has resulted in the unique spray pattern of Visko-Rhap herbicide. It is heavy enough to control drift, uniform enough to give good coverage, and resists washoff in heavy rain. Most importantly, it keeps the herbicide within the spray zone without damaging nearby foliage.

Patterns of Drift Control was produced by Matt Farrell Productions, New York.

Three Sponsors for Travel

Three companies with non-competing interests in the travel business have joined together to sponsor a half-hour film about the Pacific Island—*Islands of the Sun*, which is expected to receive over 200 free telecasts in its first year.

The co-sponsors are American Airlines, General Tire & Rubber Company and Oldsmobile Division, General Motors Corporation.

The islands involved are Tahiti, Samoa, Australia, New Zealand and Hawaii. The film shows how a dream trip to the islands became a reality for a family of four.

Advance announcement of the film to television stations advises them that commercial positions can be obtained locally (exact running time of the travel film is 27½ minutes).

Islands of the Sun was produced by Visuals, International. It is distributed by Modern Talking Picture Service.

**We can restore
your damaged film.
And we'll give you
the same
guarantee
we give ...**

our toughest customer

We'll restore your damaged motion picture film so beautifully, you can put it right back into service.

If you can't...we'll tear up our bill. That's the same guarantee we give our toughest customers. And we have some pretty tough customers.

They have to be tough. Film is the lifeblood of their operations.

The theatrical motion picture industry has depended on our rejuvenation processing for over 40 years to keep their films in service and save them crucial film replacement dollars. Then television every network. And now important industrial and educational audiovisual libraries.

Today, we remove scratches, dirt, brittleness and curls, and restore tears, lost brilliance, and scratched sound tracks, for more than 1,100 major film libraries.

The cost for restoring 16 mm prints? Only 2½¢ a foot for black and white, 3¢ a foot for color. **(And we'll give you a big 20% discount between now and May 1!)**

That's just a small fraction of what you'd have to pay for replacement prints or footage.

So don't throw out your damaged films. We can save them.

Send them to INTERNATIONAL FILM-TREAT today.

We'll process them promptly. When they're returned, you'll be able to put them right back into circulation.

Or you won't owe us a penny.

How to get our giant Film Damage Control Chart ...free!

We've developed a giant (35" x 44") color wall chart that illustrates every kind of film damage, and describes its cause and prevention. Available nowhere else, it's an invaluable reference tool for your film inspection area.

This unique Film Damage Control Chart is a \$5.00 value, but we'll send you one **free** with your first rejuvenation processing order. This valuable bonus is our way to encourage you to try our rejuvenation processing and see for yourself what a remarkable job we can do for you.

(If you don't want to send your films now, but you'd like a chart anyway, we'll send you one, and charge you \$5.00 to cover our costs.)

Mail this coupon now.

**International Filmtreat Dept. B-3
733 Third Avenue
New York, N.Y. 10017**

☐ Enclosed is our first rejuvenation processing order of (No.) _____ reels. We understand that you'll deduct **20%** from the regular cost of processing films if you receive them before May 1. And if you don't restore any film well enough for us to put back into service, there'll be no charge for processing it. (And please don't forget to send our **free** Film Damage Control Chart.)

☐ Our check or money order for \$5.00 is enclosed. Please send us a Film Damage Control Chart, plus more information about your rejuvenation processing and other INTERNATIONAL FILMTREAT film care services.

☐ I have some questions about your services. Please phone me.

The Foremost Authority on Motion Picture Film Care and Repair

Don't be a slave to your Filmstrip Negative

Shooting the master negative is all important. If it isn't done well, you'll be a slave to it forever! A poor master negative means poor release prints.

Give us your originals, transparent or opaque, light or dark. It really doesn't matter. When we finish your negative, no one will be able to tell the difference.

Shooting masters is our specialty! We've been doing it for over 20 years. That's a lot of know-how. All with one purpose. To shoot the very best filmstrip masters . . . so that you can have release prints that you'll be proud to say are yours.

Why take chances! Call Berkey Manhattan. We'll be happy to discuss your shooting needs, time requirements and costs. No obligation, of course.

Solutions for Shoreline Erosion

Years of erosive sea action are compressed into one brief movie scene through use of a simple high school science device in a new film, *Land Awash*, sponsored by Koppers Company, a leading supplier of creosote for wood-treating applications.

Produced by Pilot Productions, Inc., Evanston, Ill., the new film describes the problems of, and solutions for, shoreline erosion caused by storm waves, high water surges of boat wakes.

Because erosion is a gradual process, it usually occurs without notice. To compress the action and capture it on film, Bob Dederick, Pilot's executive vice president and the film director, utilized a wave tank made by his son for a high school science project. It was set up and photographed in Pilot's studio.

Bob Dederick (r), Pilot Productions film director, helps set up wave tank for cameraman Bela St. Jon.

The tank duplicated in minutes the weeks and months of sand and gravel deposition associated with gentle summer waves, as well as shoreline erosion caused by the scouring action of winter and storm waves.

Other important points in the film—dealing with changing shorelines due to buildup, redistribution and ultimate washing out to sea of sand and soil by currents—were explained through art animation produced at Pilot's Evanston studios, and "live" erosion scenes filmed along the coasts of Massachusetts, New Jersey and Florida with aerial and underwater shots to show offshore currents at work and wave action.

Tape to film for Bausch & Lomb

A new production for Bausch & Lomb detail men about a diagnostic tool for optical examinations has been produced via the tape to film system.

Mort Kasman Productions, New York, shot the 36-minute picture on tape at Teletronics. It was transferred to film for distribution to the B & L field man.

Battering Ram Front Ends, Mis-Matched Bumpers

Too High a Price, a new high safety film urging America "to take our life-saving technology off the shelf and put it where it belongs—into our cars and highways," has been released by the Insurance Information Institute for distribution to general audience groups and television stations by Association-Sterling Films.

The 13½-minute color film, which outlines a multi-billion dollar problem and points to possible solutions, was produced by Harvest Films, Inc., New York. It demonstrates the battering ram front ends, the mis-matched bumpers, the badly designed highway signs, poles and guard rails which are the cause of so much injury and property damage. New systems, the states, would eliminate 80 per cent the damage in low speed collisions.

Tired of the Big City Rat Race

The Big Horn Crags primitive area in Idaho is one of the few wilderness areas left in the United States. It can be seen in a new film sponsored by the Idaho State Department of Commerce and Development with the cooperation of the Appaloosa Horse Club.

Marshall Faber Productions, of Denver, produced the film, which was shot in a remote area inaccessible to car or jeep.

High in the steep 10,000 foot mountains, traversing a ledge which allowed only one horseback rider to pass at a time, the Faber unit filmed their pack animals carrying equipment and supplies.

"I'm glad I had a horse that believed in self preservation," says Faber, who directed and shot the film. "One of the crew members wouldn't listen to his horse . . . and off he went, but we caught him in time. Another member of the party watched his still camera plunge down 9,000 feet, hitting the sides of the mountain all the way down."

Black and Brown Youth Define College Education

What motivates Black and Brown college students today? A new film, *Something to Build On*, asks the question of youth studying in a half-dozen colleges across the country and finds them gaining skills for nation-building more important than anything else.

Commissioned by The College Entrance Examination Board, the film was produced by Chamba Productions, a Black film producing and marketing organization.

"The package solution"

...to total audio-visual programming

Somebody had to be first with one-stop shopping—and who could that somebody be but Viewlex!

Up to now, you've had to deal with a series of producers, writers, photographers, sound technicians, . . . and one or more equipment suppliers to put together a complete audio-visual program.

Now, Viewlex has it all. We've put the 'software' together with the 'hardware' to offer you a complete, simplified audio-visual systems service—the most effective audio-visual equipment plus a coast-to-coast network of experienced, creative "producer partners" to plan and prepare your film programs. And, when the program and the equipment are made for each other, you gain in effectiveness, simplicity, reliability, and, above all, you save money. It's a new idea and it took Viewlex to make it work.

Whatever your need—sales presentation, training program, P.R. program . . . motion picture, filmstrip, slides, tape, cassettes, records—whatever the size of your audience . . . one to one thousand—you can buy all or any part of the Viewlex package to fit.

Free booklet tells all. Write or phone Stephen Greene 516-589-6600 . . . or use the Reader Service Card for your copy of 'We Do It All.' It's free. It's from the new Industrial Sales Division of Viewlex. Need we say more?

Titles in the series are *Applying for a Job*, *At My Age*, *Cooks, Chefs and Related Occupations*, *The Counselor*, *The Job Developer*, *Job Opportunities in Hotels and Motels*, *Jobs in the Baking Industry*, *Jobs in the Sheet Metal Trades*, and *Opportunities in Clerical Work*.

Prison

This documentary, filmed in Bucks County Prison in Doylestown, Pa., probes the value and reality of prison life. Prisoner interviews bring out complaints of racism, prejudice, and a lack of respect for human dignity. They reveal that much homosexual activity takes place because sexual drives cannot be ignored. Warden Chase believes that "doing time" does not work because prisons only take bitter men and make them more bitter and even teach many their illegal trades. Many on both sides maintain that prisons and prisoners should not be separated from society through the use of a wall.

Prison was produced by National Educational Television. It is available for sales or rental from Indiana University Audio-Visual Center, Bloomington, Inc. 47401.

Kodak Multi-Media Program

When the president of Eastman Kodak makes a speech, you can count on pictures making up an important part of his presentation. A nine-screen program, using ten Carousel projectors (two in dissolve mode) created a dramatic background for the recent address by Gerald B. Zornow accepting a "Marketing Statesman of the Year" award from the Sales Executive Club of New York.

Mr. Zornow's address discussed the radical changes in marketing attitudes that have occurred within only the past decade. Reflecting on the roots of the marketing phenomenon itself, Zornow pointed to the itinerant peddler of the last century, whose risk-filled route held only one certainty—"Around the next turn of the road he knew there would be some human need to be filled." Concluded Zornow, "This is the spirit that has made American marketing what it is. It is the same spirit that can suit the job to be done in the years ahead."

The Kodak multi-media program, devised and produced by Ken Saco Associates, is also available in a standard format for other executives within Kodak. The simpler version retains all the content of the original, including overlapping screen effects. It requires two 35mm slide projectors □

A-V Equipment Directory Lists 1900 Items

The 1972-73 Edition of the Audio-Visual Equipment Directory, published by the National Audio-Visual Association, contains illustrations, specifications and prices of more than 1,900 models of equipment. Over 520 manufacturers are represented, and more than 1900 items in 67 categories are featured. The 470-page book is available for \$9.25 per copy (\$8.25 if payment accompanies order) from NAVA, 3150 Spring Street, Fairfax, Va.

12,000 Educational Sound Filmstrips

A new 24-page directory lists 12,000 sound filmstrips from 178 sources. Listings are by subject, source and price. Free copies are available from Kane Corp. A-V Division, 2900 Kane Drive, St. Charles, Ill. 60174

Guide for Management on Roles and Goals

A 15-page Trainer's Guide on managerial roles and goals, broken down into four specific areas: performance appraisal, delegation, decision making and group problem solving, is available free from Roundtable Films, 321 S. Beverly Drive, Beverly Hills, Ca. 90212 □

SELL WITH MOVIES

Movies can cost less! Why use slide films?

Your salesmen can present your product in a far more dramatic way with a movie and the MPO Videotronic Super 8

— new portable sound and color movie projector. No threading, no rewinding, cartridge load. Built-in screen, instant conversion to big wall picture. Light weight, folds to briefcase size. Uses standard Eastman Super 8 sound film. We'll make new movie for you cheaper than a slide film — or reduce your films. We

load, ship, service, guarantee. One-stop service. Low cost lease, purchase plans, even trade-ins!

Call or write today for demonstration, information.

& Howell/Washington

Joining Senator Charles Percy (Ill. Rep) at the top rung of Washington's officialdom is another former Deere & Howell chief executive—Peter Peterson, nominated as the Nixon Administration's new Secretary of Commerce.

John Deere (Deere & Company) is on the road again, showing farmers and ranchers throughout the land its 1982 edition of "John Deere Farming Frontiers" via local dealer-sponsored training programs. This series of feature motion pictures on extremely relevant and current farm-interest subjects continue decades of experience by this sponsor, ranging from nature-style "story" films to the present realistic report-films. □

Computer Programs for Motion Picture Industry

A package of computer programs written expressly for the professional motion picture industry and capable of being run on a Digital Equipment Corp. \$5,000 minicomputer has been

made available through the program library of the Digital Equipment Computer Users Society. The programs involve depth of field, running time, special effects, and theatre calculations, thus covering several important phases of film technology.

Each motion picture program is written so that the user has only to answer questions asked by the computer to obtain his answers. The computer types the questions out on the teletypewriter in ordinary English statements, permitting use by those who have virtually no programming experience.

There are five programs in the package. The first is to determine the depth of field of a motion picture camera lens of any focal length and f-stop setting. Two programs are concerned with footage-to-time and time-to-footage conversions for 65/70, 35, and 16mm film. The two remaining programs are concerned with motion picture theatres: one program is for the selection of the optimum lens for a 35 or 70mm projector; the other program concerns the optimizing parameters for constructing a 16mm theatre.

Copies of the program can be obtained through the program library, DECUS, 146 Main Street, Maynard, Mass. 01754. □

Fresh start

for your old film

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced, Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm. What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Use handy coupon below to send for your FREE Trial Certificate and see for yourself what dramatic effect rejuvenation can have... on your films and on your budget.

MAIL COUPON TODAY!

RAPID FILM TECHNIQUE, INC.

I TALKED
FOR TWO HOURS.
BUT THEY
STILL DIDN'T
UNDERSTAND.

Because of poor communications?

Here's a multilinguist that will help you bridge any communications gap. The Mastermatic II® 35mm filmstrip projector. It talks with a professional voice to your audience in their language while it automatically flicks through up to 200 frames of visual material.

The Mastermatic II projector lets you change the audio track in a wink while you retain the visual portion. So you can make your presentation to your local personnel using the track that speaks in their buzzwords. And when the people from your foreign office come calling, snap in the audio track that speaks in their native tongue.

The key to this flexibility is the snap-in Unipak™ cartridge that holds the filmstrip. And the interchangeable audio subcartridge that holds up to 15 minutes of high fidelity sound—or 30 minutes at $1\frac{7}{8}$ IPS—on a continuous loop. You can update the audio track without touching the filmstrip. So audio tape and filmstrip should last indefinitely. Both will remain in perfect synchronization no matter how often you interrupt your presentation for audience response. And you can hold any frame for as long as you like without damage to the film.

A dual purpose projector is wrapped up in the Mastermatic II's portable, lightweight, slimline case. You can project the image on a self-contained 100-sq. in. screen. Or change over in less than a minute to conventional large-screen projection. The quality 35mm format and bright 500-watt lamp provide a sharpness and clarity of image that 16mm or super 8mm cannot equal. Whether you're making your presentation in a large auditorium. Or in a brightly lighted office.

For full details on how to enlighten and motivate your audience in any language, fill out and return coupon to **Optisonics Corporation, Montgomeryville, Pa. 18936.**

- ☐ Please send literature on the Mastermatic II 35mm projector.
☐ I'd like a demonstration. Please have your representative call.

Tape-to-Film Transfers

Custom-Made Prompting System[®]

TV Training Methods at Army Signal School

20 million viewers for \$1600.

Yes, 8¢ a thousand.

Actual circulation figures from our files.

You can match them, with a "press release on film." A minute or less of 16mm-sound footage, plus printed script, that you give away to selected stations.

Important: Hire Modern to send your clips to the stations. We know the right people at the right stations. They know us, and recognize that our distinctive package contains quality material. Result: High acceptance rate. We send you a report on which stations used your film and how many people saw it.

We used to call this service Modern TV Newsfilm, but we've renamed it Modern TV Spots. Reason: We've found a much wider opportunity for you. A news angle is fine, but stations will use seasonal material, public service announcements, fillers of many types. Our experience — and surveys — show that they welcome clips on environment, business (this gets a high rating, in fact), women, youth, sports, other subjects.

What else do you need to know? Ask Modern.

Ask for our free TV Newsfilm kit and our TV Newsfilm survey.

Now the best-known name in videotape is in videocassettes.

It's easy to recognize the benefits of videocassettes as an audiovisual tool. The handling ease. The added protection for your program material.

It's also easy to anticipate some possible problems. What about compatibility between different brands of cassettes and equipment? What about the quality of picture and sound?

We can help answer both questions.

First, "Scotch" Brand Videocassettes are

compatible with all $\frac{3}{4}$ " U-matic videocassette equipment available at this writing.

Second, we've provided our videocassettes with our most advanced videotape, "Scotch" High Energy. High Energy's remarkable magnetic properties were engineered specifically for recording at slower cassette speeds. It can provide you with color masters and duplicates every bit as good as reel-to-reel helical tape. Perhaps even better.

As the pioneer in videotape, 3M has long set the standards of quality. Today, we're setting those same standards in videocassettes.

For facts about today's videocassettes, write Market Services, Magnetic Products Division, 3M Center, St. Paul, Minn. 55101.

3M
COMPANY

The new Norelco soundslidemoviefilmstrip machine.

(or PIP, for short)

PIP combines all major audio-visual techniques in one self-contained unit.

PIP is as easy to load and use as a cassette tape recorder.

PIP brings remarkable economies. As a slide/filmstrip presentation, one foot of PIP Super 8 film contains 72 individual visual frames. And one foot of film can be duplicated for under 10¢ a foot. That's 72 visuals for under 10¢!

PIP can take an ordinary slide or filmstrip presentation and add the dramatic impact of motion sequences to it . . . without making it costly or complex.

PIP will save some 80% to 90% of the film footage normally used in motion picture films. PIP does not have to run at a fixed rate of speed for titles or at a high rate of speed for motion. For example, with regular sound movies, it takes 120 film frames to show a still picture on the screen for just 5 seconds. With PIP, only 1 frame is needed . . . and the sound doesn't stop.

PIP can be used by individual or small groups of students without the necessity of setting up a screen and projector, threading the film, etc. A student can stop it, advance it one frame at a time, or fast forward and rewind it . . . with pushbutton simplicity.

PIP cassettes weigh just a few ounces and are easy to mail, handle and process.

PIP does *not* involve the complexities of videotape equipment such as sophisticated electronics, conflicting TV stand-

ards and high costs of production and duplication.

PIP is flexible. It can change sound tracks in 2½ seconds to suit different audience interests or different languages by slipping in another sound cassette.

PIP lends itself to all kinds of creative film techniques familiar to film makers. Animation, slowdowns, speed-ups, pauses, freeze-frames, frame changing, music . . . and lots of other ways of adding interest and clarity to films . . . can be done simply and economically.

Now that you know a little about what PIP does . . . what we'd really like to tell you is what PIP can do for you. If you use sound—slides—movies—filmstrips for teaching, training, demonstrating or selling . . . just write: North American Philips Corporation, Norelco Training and Education Systems Division, 35 Liberty Avenue, Morristown, N. J. 07960, Dept. N-1.

"ECLAIR PUTS YOU IN THE PICTURE"

GV16 — The handy camera. High speed, portable,
quick change 100/400 foot magazines.
adaptable for sports, medicine and the military.

CM3 — The versatile camera.
Can operate as 35mm or 16mm.
35mm Techniscope or 16mm Techniscope.
Fast changing magazines.
numerous accessories and
operating flexibility.

NPR — The complete professional 16mm camera.
Quick change 400 foot magazines.
Great flexibility in lens use. Universal eyepiece. Runs on batteries.
Total mobility; cordless sync sound with crystal controlled oscillator.

ACL — The smallest of the 16mm professional cameras.
Crystal controlled, takes 200 feet of film.
changes magazines in less than 5 seconds.
Weighs less than 9 pounds, has great balance.
uses any lens, has phenomenal accessories.
runs quiet at 18 frames per second.
as steady as a rock.

Hubert Wilke to be regular Business Screen columnist

We're very happy this month to welcome a new column to our pages. Hubert Wilke, who has been an outstanding consultant, designer, engineer and spokesman in the audio-visual industry for many years, will tell us (starting on page 20) about the growing world of "communitronics" and how it fits into industrial communications today.

Hubert Wilke and his associates have designed some of the most original and efficient audio-visual systems in use by industry throughout the country. He was one of the earliest proponents of audio-visual communications as a valuable company-wide system, rather than as a scatter-site solution to individual communications problems.

Many Wilke-designed systems have, over the years, set standards of excellence throughout the industry and

were early heralds of a rapidly coming trend for better and more extensive industrial audio-visual usage.

The Wilke organization is unique in that they neither sell nor represent the products of any manufacturer. The 25 man staff of designers, draftsmen, and engineers thus maintain a professional objectivity in the recommendation and specification of the best equipment to meet the specifications of each particular assignment. To date the firm has provided the design for over 650 individual audio-visual systems, encompassing over 50 closed-circuit TV studios, serving a total of 195 clients.

I'm sure industrial communicators everywhere will welcome our new voice in the world of communitronics, Hubert Wilke. We're delighted to have him.

WHAT IS FOTO-KEM?

Simply, it is photography and chemistry combined. It is the fixed and required ingredient that goes into the making of a motion picture laboratory. It is modern hardware and precise technical instrumentation.

The rest of the formula is flexible but more complex. In fact, it is these extra more important ingredients that we call the "Foto-Kem Elixir." It gives Foto-Kem its unique flavor and soothing effect.

So the next time your fever goes up because of a lab pain, try us. We're the "big" little lab on the bill where you are a name not a number. Where your film is a precious entity, not a mere commodity. Where you can communicate directly with people who care.

This is where it's at, with the Foto-Kem craftsmen who mix lots of soul with their skills, and that is really what our elixir is made of.

Come in some time, you'll be greeted with a smile even if you're not president of a network.

Feedback

Multi-Media

Other than taking all that space hoping for a return to the old time region, Lee Coyle, in his article "Multi-Media: the Great Industrial Show" (March/April), would have been better advised to just come out with it: If God had meant man to view multi-media presentations He would have given us three

wonder how he feels about multi-media flipchart presentations?

James W. Hulfish, Jr.
Director of Marketing
Spindler & Sauppe, Inc.
North Hollywood, Calif.

Super 8

er article on Super 8 (March/April) most timely.

specially the last paragraph where say "not quite yet." Hamton Engineering has been working on a Super 8 sound film package for Massachusetts Institute of Technology which is longer somewhere in the future. It "almost" now. First public introduc-

tion will be in a paper to be given at the May SMPTE meeting in New York.

All the finished hardware will be on display during the NAVA convention in July and the first deliveries will commence October 1, 1972. That is somewhat better than "not quite yet." We hope you agree.

Since the program was funded at MIT and aimed at the film classes in schools and colleges, the commercial aspects are yet to be explored. We, HEA, as the manufacturers, are answerable to MIT for package quality and reasonable end pricing. MIT will also be calling the shots on the first 100 systems as to distribution.

All told the effort has been costly and time consuming, but it is here now. We feel sure your readers would be pleased to hear that such is the case.

Hy Shaffer
Hamton Engineering Asso.
Norwood, Mass.

Australia

We have been readers of Business Screen for over 10 Years and would

like to thank you for the wonderful help which has been given to us in starting and developing our Company.

We are the sole Australian distributor for the Fairchild Projector System.

We receive constant requests from Sales Executives for Retail Training Films in pre-packed Fairchild Seventy-Series magazines.

We also have requests for Management Training Films.

Many Educational authorities have asked us to provide films for High School use in a multitude of subjects.

I am sure there must be American Training and Educational Film producers who are working in the Fairchild frame who are seeking an active sole Australian distributor.

We are holding an Audio Visual Exhibition in July and hope to commence promotion shortly. We hope to hear from some of your readers.

A SOUND

... that lets you transform a lackluster slide presentation into an exciting audio-visual show. By adding voice. Music. Sound effects.

Sound-O-Matic™ Programmer-Recorders and Playback Units are compatible with most automatic slide projectors that have remote control. Their tape cassettes give you up to 60 minutes of audio—from commentary to Carmen to Calypso. And automatically advance each slide—in perfect synch with the audio—using inaudible signals programmed onto the tape.

Record the audio at your leisure. Listen to it critically. Edit, or erase and rerecord until you're satisfied that your presentation has the impact to hold your audience. The "sizzle" that will help sell your product, service or idea. Or the credibility you need for effective training or teaching. Then ... make your presentation in confidence. And relax and enjoy it along with your audience.

Sound-O-Matic units are available in four versions, each of which is capable of high quality audio recording. The Sound-O-Matic I Programmer-Recorder, in addition, lets you record onto and erase from the tape inaudible signals which automatically advance each slide in perfect synch with the audio. Model III gives you everything that Model I does plus a response feature that allows you to program pauses into your presentation for audience participation. Sound-O-Matic Models II and IV do everything that Models I and III do respectively, but do not have the programming (synch tone) feature. They can, however, control projector slide advance by playback of pre-programmed tape.

For full details or a free demonstration of these sound investments, contact
Optisonics Corporation, Montgomerystown, Pa.

REPORTS ON CURRENT EVENTS AND TRENDS

RCA's SelectaVision MagTape System Announced for 1973

RCA has announced plans to produce and market a new magnetic tape color video player by late 1973.

At the same time, Bell & Howell and Magnavox also plan to market products based on the new RCA system. Bell & Howell will manufacture for RCA and others the precision tape transport component of the system, while Magnavox will integrate its low-cost color camera into the system and make it available to other manufacturers.

The SelectaVision MagTape system permits playback of recorded tapes, recording off-the-air, and recording and playback of "live" scenes with an associated TV camera.

A one-hour cartridge, costing about \$30 loaded with blank tape, is about the size of an average hard cover book. The record-player, is scheduled to sell for approximately \$700. Licenses will be offered to other companies who wish to manufacture the product themselves.

Features which the RCA SelectaVision system will offer include: in-cartridge scanning that simplifies the tape transport mechanism, a modular electronics package with fewer parts and components than other systems announced to date, and stereo sound capability.

While committing the SelectaVision MagTape system to production, RCA is continuing development of its playback-only Holotape system in anticipation of demand in specialized markets for that type of video player.

Modern's CATV Project in N.J. Gives Voice to Communities

A new dimension for cable programming is being explored in an experiment launched April 3 by Video Programming, a division of Modern Talking Picture Service, Inc., and the Micro-Cable Communications Corp. cable system in Wayne, N.J.

With films supplied by Modern, Micro-Cable is carrying two and a half hours or more of programming Monday through Friday over a 10-

week period. Modern and Micro-Cable have met with educators in the Wayne area to introduce the experiment and explore how they may have a voice in the scheduling of films so that the programming could be correlated to the subjects being covered in the classrooms. Further meetings are planned with representatives of other community agencies, such as religious leaders, to give the local community a voice in determining what is shown.

In addition to programming 16 motion pictures from educational companies in the areas of science, literature, mathematics, art and social studies, a number of sports and travel films and social documentaries will be scheduled that were produced by various business and government organizations.

According to Fontaine Kinchen, Jr., vice president of Modern, the primary purpose of the experiment is to find out how cable operators and program suppliers might work with local schools and organizations to provide some of the educational special interest programming many believe will become a most important ingredient of cable origination. We also intend to investigate ways that such programming might be underwritten by local organizations and national and local advertisers. We will extend the experiment to another cable system later this spring to gain additional insight into the problems and opportunities of cable programming."

\$100-125 Million 1972 Videocassette Market Forecast in VIDCA Address

Dr. Stafford L. Hopwood, Jr., president of Videorecord Corporation of America, has predicted that the videocassette market will generate revenues between \$100 and \$125 million in hardware and software sales during 1972, and at the same time cited "the lack of significant commitment from the three major software source centers as 'the missing link' in the growth of the North American industry.

Speaking on the state of the North American market at the Second VIDCA International Conference on Videocassette and Video-Disc Programming and Equipment in Cannes, France, Dr. Hopwood remarked

“ I think that the most important advance in filming today is ‘APEC’. Because it saves time and fosters creativity. That’s why all my rental 16BL’s are now equipped with Arri’s built-in exposure control system. ”

Victor Duncan

The Arri Precision Exposure Control (APEC) is the unique system that transforms the reflex finder of the Arriflex 16BL into a total information center. With APEC, you get it **all** — Focus, Depth, Field **and** Exposure Control! Write for the complete story.

ARRIFLEX
COMPANY OF AMERICA

P.O. Box 1050, Woodside, N.Y. 11377 • 1011 Chestnut Street, Burbank, Calif. 91502

"the three resource centers—television networks, film producers and the publishers—have stayed away from the battle, from our race, waiting for others to set the pace, prove the markets, eliminate the bugs."

He added, "it is an unfortunate mistake, and as a result, will reduce to more modest terms the growth factor this industry will realize."

"However, videocassettes in the North American market," he noted, "would seem poised to take a positive step after the war of words which has marked the last decade,"

Dr. Hopwood made the first public announcement that the Digital Recording Corporation, in cooperation with the Battelle Development Corporation of Columbus, Ohio, is presently exploring the videocassette application of an optical photographic recording and playback system.

"One objective of the invention," he said, "is to provide an improved information storage and retrieval system for optically recording and playing back digitally encoded electrical signals on photographic film at an extremely high information density."

"The great potential for this digital recording method," he noted, "is its

capacity to bring to the market a revolutionary product which provides the most economic and convenient form of storing audio-visual information.

"This proves that we've only just begun to fully realize that technology is change," he added, "and in the infancy of our industry, each technological change will bring us close to providing the world with the true revolution in communications."

TV Camera Small as a Wristwatch?

RCA has demonstrated a research camera with a solid state "eye" which could be a forerunner of a TV camera small as a wristwatch.

The camera's imaging sensor is a silicon integrated circuit in contrast to the vacuum tubes of conventional TV systems. The camera is about the size of an electric razor and fits easily into the palm of a person's hand.

A model of the camera, developed at RCA Laboratories in Princeton, N.J., has been delivered for evaluation to the Air Force Avionics Laboratory in Ohio, which sponsored research on the system. It measures 2x2½x3½ inches and weighs less than one pound.

The camera's integrated circuit "eye" consists of 32 rows of photosensitive elements, with 44 elements in each row. When an image strikes the array, an electrical charge proportional to the light intensity is produced in each element. The rows are then read out very rapidly in sequence to produce a black-and-white TV-type picture.

The experimental camera could lead to a new generation of very small cameras with potential applications for military and space missions, news coverage and perhaps for consumer use with home recordings and playback systems, according to Dr. William M. Webster, Vice President of RCA Laboratories.

"Considerable research is still required before this type of camera is ready for any of these applications, but the research model is a significant step toward an all-solid-state camera," Dr. Webster explained.

The research camera demonstrated produces a limited number of picture elements, but has sufficient resolution to reproduce an object about the size of a human face in recognizable detail. The next logical step is to develop a sensor with many more elements, Dr. Webster said. Such efforts have been initiated by RCA, he added.

Short Takes

"Modern Memos," Modern Talking Picture Service's "Notes of the Film Medium," reports that the company

continued on page

this case is closed

because **FAIRCHILD** *Series* **07** **"Agent"** has closed your sale with the case.

An Open Question

WHAT does the 07 "Agent" hold inside for me?

WHAT can happen for me when I open this 07 "Agent" case?

The Challenge We challenge you to open this case. (Just turn to page 43). Examine its contents. See with what economy of advance design Fairchild has perfected each part of this instrument. Appraise the unique features that combine to make the 07 "Agent" the most portable, easy to operate, versatile and effective communicator in the electronic field today.

If you should not care to accept this challenge by turning to page 43 this message (unfortunately for you) will self-destruct!

**There was a producer from Himerick,
Who said as he began his limerick,
"I wouldn't be sunker Duncan;"
If I'd bought gear from this Gimmerick.
And that's the idea of this limerick.**

Forgive our poetic license (it expired), but that's really the advantage of buying motion picture equipment from Victor Duncan, Inc. . . . it works. In addition to our competitive prices, you get the assurance that your equipment has been checked for proper function and operation by people who know what they are doing.

We're serious about the motion picture business . . . we don't do anything else—no still cameras, no flash bulbs, no slide projectors. We think it makes sense to be able to excel in a category in which we're experts. If you've bought gear from us in the past, we're sure you've discovered that we can't possibly confuse ECO with Kodabromide because we deal only with motion picture items. If you haven't bought equipment from us before, get serious! Forget the general practitioners. Talk to the specialists at Victor Duncan, Inc.

INSTANT EVERY-THING

(the next best thing to instant success)

Whatever you need to make your filmmaking a success, look to CINE 60 for it. Whenever new trends are created, chances are we've a major part in making them happen.

For good reason. Besides a full line of top-quality (and thoroughly-maintained) equipment for rental, CINE 60

has designed and manufactured a number of exclusive

items for the professional. Like the lightweight sound blimp (only 19 lbs.) below, which made sync-sound *verité* *economical* as well as effective. We call it "Instant Quiet."

Or take our "Instant Power" Belt*: it's now an industry standard power supply . . . not to mention the reason all those ski and motorcycle films are so lifelike.

There are many more things we could mention. Our Snaplok — "Instant Camera Mounting." Our Vacu-Platform suction mount — "Instant Camera Platform." Our Universal single and double-shoulder camera pods — "Instant Mobility." And many others. But why say more . . .

Whatever your filming needs, all you need to know for "Instant Everything" is one name and one number.

BY OTT COELLM

IAVA's Next Quarter Century Begins at Tan-Tar-A May 8-11

WITHIN THE YEAR after the Japanese surrender ended World War II (August 14, 1945) a small group of audio-visual managers within Midwestern companies met to dine and discuss the formation of the nation's first professional society dedicated to "*study all means of audio-visual communications . . . to promote better standards and to establish a high concept of ethics in the relations of members with associated interests.*"

The credo of purpose remains unchanged as the Industrial Audio-Visual Association begins a second-quarter century on May 8-11 at its 26th annual meeting at Tan-Tar-A beside the Lake of the Ozarks, in Missouri. Those formative evenings at Mrs. O'Donnell's tearoom adjacent to our publication offices in Chicago brought together International Harvester's Paul Lawrence; Swift & Company's Bill Bastable; R. P. (Red) Hogan of Kraft Foods. We were soon joined by O. H. Peterson of Standard Oil (Indiana) and so it all began. All four "founders" named were the first Presidents of IAVA with Paul Lawrence assuming that post at the initial annual meeting in Chicago.

By constitutional limitations, IAVA can have no *association* members nor any whose principal activity is that of a supplier. Membership has wisely sought for *relevance* in corporate a-v management; kindred interests are more important than numbers. And so the years have been kind to IAVA and its members; death has claimed a few of the best; the changes in corporate status have taken others to high positions. As the sole founding member without corporate a-v portfolio, our one condition through all the years that we have no official status has been well met.

Strong in Eastern membership, particularly from New York City, IAVA leadership has been very evenly shared between the Manhattan/Midwest orbit: New York contributing nine past-presidents and Chicago exactly the same. Ohio's tradition of presidential birthplaces brought Dr. Lee Coyle (Ohio Bell, Cleveland) to the helm in 1970, followed by Gerry Hall (National Cash Register, Dayton) in 1971. The pendulum swings Eastward again in 1972 as Boston's Harold Read (Di-

rector, A-V Activities at Liberty Mutual) becomes president-elect at Tan-Tar-A.

Going far up the corporate management ladder (and out of a-v) have been such past leaders as Red Hogan, merchandising executive at Krafco; Gordon Biggar, who became public relations director at Shell Oil; Leo Beebe for a long while directly serving Henry Ford II and now in a top post at Ford Philco. The "magic man" Bill Cornelly (president of IAVA in 1967) went into top corporate advertising duties at Union Carbide.

Corporate retirement has taken O. H. Peterson, John Hawkinson and Larry Warnock into a-v consultancy work; the late Bill Bastable and Al Morrison (Mobil, N.Y.) have been sorely missed. Changes in corporate assignment brought new IAVA candidates into the roster to replace such past presidents as Frank Greenlee (U.S. Steel); and Bill Cox (Santa Fe).

But who among us "old-timers" will forget those gatherings at West Point and the Princeton Inn in the East; in Hollywood and at the Hilton in San Francisco? IAVA went "international" when the association held its first non-U.S. annual meeting at the Queen Elizabeth in Montreal last year.

And the years have been highlighted by IAVA's *group* participation at the world's foremost showcase of the industrial film; going to West Berlin for the International Industrial Film Festival events in 1969 were IBM's Bill Walton (IAVA president that year), past-president (1965) Harold Daff (Honeywell, Inc. staff film producer), our illustrious Chicago program chairman at the Center for Continuing Education, University of Chicago; Milton Ritt (Combined Insurance Co.); and Johna Pepper (Ford Motor Co.). They were joined at the same event in Barcelona, Spain last year by brother Walton (and Mrs. Walton); Bob and Mrs. Unrath (port of New York Authority); Dick and Mrs. Roxas (Weinghouse), among others.

Governors of host states (especially Minnesota and New Jersey) have addressed IAVA meetings; Senator Charles E. Percy (Rep. Ill.) was honored as IAVA's "Man of the Year" while still president of Bell & Howell at the 1961 annual meeting in Chicago's Edgewater Beach Hotel. Father James Keller, founder of the Christ-

plrs, was a guest speaker at an I/A/NAVA luncheon in Chicago; inventors, producers, and other notables of audio-visual fame have given their finest ideas and guidance at other meetings through this past quarter-century.

The "A-V" Man in Perspective

Who are these men who guide audio-visual programs for most of the country's largest corporations, from AT&T to Xerox? A recent survey of the membership of IAVA revealed these facts: They're "seasoned" performers at their chosen professional tasks, a cross-section shows that only 11 of those responding were under 40; most are between the ages of 40 and 50; with only 15 over that age.

Their salaries "average between \$5,000 to \$19,999 annually and they earn that by supervising an "average" of nine people each, in addition to intensive work by themselves. The majority have at least a bachelor's degree; nine had master's degrees and one, a doctorate degree.

1.3 percent of these corporate a-v managers work with motion pictures; 7.9 percent were also active in using videotape but they're also active in audio tape production and utilization (8 per cent); engaged in slide films (1.7 per cent); and in slide production (82.6 per cent). Overhead projection accounts for 60.9 per cent of their media work; flip charts, another 43.5 per cent and printed materials, 45.7 per cent.

Out of the so-called 40-hour week, the average a-v manager spends 13.1 hours or 32.8 per cent of his time in administrative detail.

The most significant factor in this cross-section of IAVA membership is that of experience: these managers had an average of 18.4 years entirely devoted to audio-visual activities.

The need for in-company training of future a-v managers was clearly indicated by the fact that only 26 per cent of the men responding had their potential "replacement" working for them.

Where will you find the "A-V Man" within the Corporate management structure? Probably within Sales Promotion, Public Relations, Communications, Advertising, Training/Education or Community Relations. He's "listed" under all those "departments" or he's generally that company's Director of Audio-Visual Activities, serving in all departments and executives from Board Chairman and President down through the ranks.

Models" abound: like the complete

Movies to write by.

You can leave the lights on and let your audience take notes, when you show films with the Bauer P6 Automatic 300.

Because this superb portable 16mm sound projector features a metal-arc lamp, which is up to four times as bright as conventional projector lamps.

Or you can use the Automatic 300 in the dark, to fill even large, distant screens with light of daylight quality. The kind of light you need for a brilliant image.

No wonder this projector is recommended for auditoriums, theatres and large conference rooms.

It's available in optical and optical/magnetic playback models.

Other features: auto thread-

ing; provision to connect optional change-over unit (also recommended for remote control of projector); and Fail Safe switch that stops projector if film breaks.

Other Bauer professional 16mm projectors:

Bauer P6 Studio 16 mm double band projector. A film maker's combined film-and-sound studio.

Bauer P6 Synchron—ideal projector for film screening. Manual threading. Optical/magnetic playback and magnetic recording.

Bauer P6 Automatic M152—Self-threading A-V projector. Optical/magnetic playback and magnetic recording.

For more information, please write us.

NEARBY A KINO-WAY FILM EXHIBITOR

paradox

BY STANFORD SOBEL

PARADOX: Nostalgia just isn't what it used to be in the good old days.

When I first started writing films there were a few general business principles accepted by everybody. One of the firmest of all was the conviction that if a producer delivered a fine film which accomplished the purpose of the sponsor, and if he charged a fair price for the production value that he built into the picture, generally speaking he could count on the client's returning to him for his next project. Everybody accepted this notion. One way of selling a picture to a new client was to point to the many long years of repeat business from the same customers. Client loyalty was a reality.

But client loyalty has practically disappeared today . . . both for producers and for writers. As recently as five years ago, 90% of my own assignments were for people for whom I had previously written films. Today, that figure is closer to 50%, which is twice as high as it is for most of the writers I know. This is not because of any shortcomings in my own performance, nor is it because of any changes in producer performance for their clients.

There are many marketing reasons for this situation . . . the "slopover" of buying patterns from the TV commercial business, the increased pressure by companies upon their executives for cost-cutting, the diminished role of the film salesman or account executive, the disappearance of some fine film production companies, the trend toward mini-conglomerates with all their lateral promotions" and their "profit-center consolidations," and the generally depressed business conditions of the last

couple of years, which put a high premium on new sources of supply and buying by the numbers.

But whatever the underlying causes, client loyalty is not admired or regarded with high esteem.

In today's business environment, a producer has absolutely no assurance that producing a good film for his client will assure that he will get the next film from that client, or even that he will be called in to compete for the job when the client is selecting a producer.

This is a sad state of affairs, a kind of moral and ethical breakdown which has some very serious implications for the future of our industry.

For example, one obvious result is that the producer begins to look upon each individual job as a single profit entity . . . one on which he should make as much money as possible regardless of the consequences. After all, if he can't build any reservoir of goodwill for the future, he should not invest his creative resources in some intangible, abstract equity which may be non-existent by tomorrow morning.

Furthermore, this approach makes films more expensive than they should be. One of my clients has given me a script to do every single year for the last seventeen years. When I was planning this column I asked him whether they ever interviewed other writers. "Yes," he answered, "but they didn't come up with anything new. Besides, we can't afford to educate some new writer in our marketing patterns, our point of view, our product mix, our special problems . . . and that training would cost us a lot of expensive executive time." Then he continued with a smile, "Why, did you have someone in mind for us?" I mumbled a little and then abruptly changed the subject.

Of course, there are some producers who partially *invite* a client to move on to someone else. These are the people who have what I call "Systematic Arrogance." They produce a certain kind of picture, and you accept the film you get from their system or you can damn well take your business elsewhere. These are people racked up with a particular directorial point of view, or a systematic formula

to which all clients must conform or special equipment in which they invested a lot of money, or a piece of real estate they have to amortize or sometimes even just a certain cinematographic philosophy which has made a lot of money for them.

One of the reasons nostalgia is what it used to be is that the film industry is moving so rapidly. The "good old days" today mean 1969. And what's fascinating to me is the fact that the kind of client who gets a good film and then moves on to a new producer, just for the sake of novelty is the very client most likely to see an old-fashioned formula film from his new producer. Why?

Well, think about my 17-year client for example. The big challenge there is to come up with a fresh way of telling their story every year. You can bet your bottom dollar that whatever idea a different writer presents to them, in his effort to get the account, has already been done some time during the last 17 years! Assuming that I remain inventive and original, their best chance for an innovative film idea is to challenge each year with a demand for "something new."

And that brings us to the real crux of this column. How *does* a writer or a producer come up with a new idea or an innovative film? The question I am asked more often than any other when I speak at seminars or festivals is this one: "Where do you get your ideas from?" The answer is . . . I really don't know. It is one of the greatest mysteries of life. I know that sometimes the pressure to come up with a new film idea is sheer, unadulterated torture which I feel will somehow never end. And yet . . . in some strange mysterious way the idea eventually does develop every single time . . . sometimes practically the last moment.

The whole creative process is a vast, exotic realm which leaves me constantly astonished and in awe. Creativity is a mystery, one which is somehow tied in with ego, experience, conscious motivation, and subconscious thinking. The writer thinks in different ways from the way other people think. My own originality

From his ego-centered office in New York City, Stanford Sobel looks at the world of film with the special viewpoint of the free-lance writer. His column, "Paradox," appears in each issue of this magazine.

The simple truth about multi-image.

You can get it from any of these certified programming professionals.

You've heard that the path to multi-image is laced with pitfalls, but you haven't heard right.

Don't worry. The dealers below know every inch of the terrain. They hold the Spindler & Sauppé Certificate in Audio-Visual Programming—which means that they've completed an intensive course on course for professionals, and are now among the country's handful of programming experts. In fact, they may be the country's handful of experts. They can show you an astonishingly

safe and simple new route to smooth, sophisticated multi-image automation—a route that avoids pitfalls completely. And the companies they represent offer expert assistance in the application, installation, on-site training and maintenance of all Spindler & Sauppé equipment. By all means, go into multi-image—but go with one of these expert native guides:

Spindler & Sauppé

The leader in audio-visual programming

focus on communitronics

BY HUBERT WILKE

SPEAKING for all the members of the Wilke organization, we welcome this opportunity to share our thoughts with you in these pages of a pioneer in audiovisual publishing. I say "our" thoughts because that's exactly what we intend sharing. Just as each of our consultant assignments receives the benefits of our specialized in-house talents, so too will this column call upon each of our senior specialists to report on his respective expertise. Thus, from issue-to-issue, the by-line will change.

In the months to come, Ray Wadsworth will report on the optical aspects of projection arrangements, front versus rear projection, and viewing criteria for various seating arrangements. Ed Hodder will cover supplier/installer relationships, while our sound specialist, Irv Wood, will write about audio systems and new conference call concepts. Bob Nissen, our senior associate covering telecommunications will review the pertinent aspects of industrial TV studios, computerized information displays, and the basic requirements of electronic distribution facilities throughout corporate headquarters buildings. Gordon Wolfe will report on the rapidly expanding technology available to meet the increasing demands of varied and more effective security and surveillance systems. And, the new freedom of choice in the selection of telephone and PBX systems will be outlined by our phone consultant, Richard George.

There will be others, too. For if all of us—(you included, dear reader)—limit our interests and concerns only to an involvement in the facilities side of the communications coin, we will end up with a situation in which we would have not only altogether too many machines, but we will be left with machines that have absolutely nothing whatsoever to "say". To avoid this dilemma we are, and have been for some time, strong advocates that software abilities must be promoted and encouraged at all organizational levels. And, along with it must go an acute awareness of the rules and the role for effective graphics used in management information display systems. This vital area will be covered in our column by Matt

Murgio, author of the recent book, *Communications Graphics*, and director of our Programming Services Division. Periodically, he will contribute his expertise on software systems, procedures, methods and techniques to these pages.

In addition, we will draw upon comments from our other offices. Bob Vogel, senior associate in charge of our Los Angeles group will cover some of the innovative facilities planning and programming concepts emanating from the West Coast. And, finally, from Brussels, Karl Lendenmann, who heads up our international operations, will keep an eye on items of interest on the foreign front.

Admittedly, this approach is somewhat novel for such a column, but then the almost never-ending proliferation of information arising from the communications explosion defies the ordinary. Further, we reasoned, since a team-effort that calls upon our in-house specialists is the way we meet the more demanding and complex consulting assignments that confront us, then why shouldn't we take the same approach in creating this column? Once that decision was made, we tackled the question of an appropriate and, hopefully, provocative column heading.

In seeking what we hoped would be a fitting title for the new column, we exhausted the office suggestion box. Would you believe—the *Now Communications*, *Hardware Happenings*, and the *Communications Gap*! Such captivating captions were naturally representative of the creative output of our younger, free swinging staff members. From our more staid and stable seniors came such words of descriptive wisdom as *A/V Tips & Topics*, *Sight and Sound*, *AV Focus*, *Communications Concepts* and *A/V Guidelines & Sidelights*. When the chips were down, however, and it came to a final decision, our selection of a column caption reverted to *Communitronics*, a word we coined some years ago, and still believe best describes the ever increasing application of electronics to communications.

Moreover, the word provides a most compatible umbrella for an era of

ETV, ITV, CRT, etc., as well as the electronic distribution of conventional optical mediums such as slides and film. *Communitronics* also holds meaning for an encapsulated world of video cassettes and the promise of wonders of flat wall display systems providing each home and/or office with an instant electronic selection of services, instruction, information and entertainment.

Our clients often ask—are all the new electronic concepts going to replace the chalkboard, flip chart and overhead projector? The answer, of course, NO. They will supplement the basic tried and true methods of presentation. You will recall that television did not do away with radio, but rather changed the concept of radio from a national network (remember Fibber, McGee & Molly, The Shadow and Amos and Andy bringing a country to a 15 minute standstill for nights a week), to a very dynamic local medium. Radio today is a more personal medium that provides selective services (traffic reports, telephone talk shows, music and news geared to the needs of thousands of individual communities across the country. Nor have books been done away with by the picture tube. Indeed there is evidence to support that good TV drama such as *King Henry VIII* and *Civilization* sends viewers audiences rushing to their local book stores.

The challenge in designing any a/v facility is to make certain that there are the proper provisions for the future use of techniques that supplement the tried and true devices as the client's needs and abilities become more sophisticated.

The marriage of electronics to communications is admittedly only in the stage of a honeymoon and the development and implementation of the concept will continue to test the technological minds for generations yet to come. So, until someone comes up with a more descriptive term, will, at least in this column, refer to it as the new science of 'communitronics'. Who knows, it may catch on and someday someone may write a *Now Generation A/V* column about

Hubert Wilke is president at Hubert Wilke, Inc., an international organization specializing in communications facilities design and programming consultation.

Audiscan helps you face tough customers.

Everything about the Audiscan sight/sound strip system is designed to help you sell more effectively. Starting the moment your salesman steps inside your customer's office. All he has to do to begin his presentation is plug the projector, turn on the power, snap in a cartridge and push the start switch. Then he can forget about the projector and concentrate on the customer. The cartridge takes over and automatically programs a full-color strip with synchronized sound. When he wants to answer a question, he just pushes the stop switch to stop the program. Then pushes it

again to continue, still synchronized.

Because the presentation is pre-programmed inside a sealed cartridge, things never get out of order. Your customer always sees and hears exactly what you want him to. And your salesman never has to fuss with slides, films, tapes or records.

You not only have a reliable presentation, you have a reliable projector, too. Maintenance costs are extremely low, and the rugged Audiscan design keeps right on working even after years of travel abuse.

For full details fill in and mail the coupon. Do it right away—nowadays all the customers are tough.

See the versatile Audiscan projectors to choose from, starting at \$225. Plus a full line of accessories.

 **Audiscan** The Happy Medium

a-v man

James G. Damon, Jr. Manager of Audio Visual, Design and Broadcast Services, IBM World Trade Corporation, is Business Screen's A-V Man in this continuing series of profiles of leaders in the industrial audio-visual world.

When James G. Damon, Jr. graduated from Yale in 1947 with a degree in international relations, he faced a major decision: whether to go on with a career in foreign affairs which was the direction his formal education had taken him, or to pursue his college avocation, which had been working in the audio-visual realms of the Yale student broadcasting station.

Temporarily, the lure of radio and the brand new medium of television won out, and he took off to Hollywood to start his first job as an NBC page boy.

But 16 years later his two careers came together again when Jim Damon took over the job of Film Activities Manager for IBM World Trade Corporation where his duties encompassed practically every kind of audio-visual media and operations all over the world.

Damon looks back on his first job with much affection. "Starting out at the bottom, broom in hand, is the best thing that can happen to a young man. I was lucky to be in a most dynamic industry—TV—just when it was beginning, and on the west coast, a dynamic area. After the page boy days, I went through a lot of the other jobs that broadcasting trainees are put to: mail room, shipping, etc., until I finally made it into actual broadcasting on the production side as a floor manager—the guy who throws cues—and then into the film studio supervising the airing of kinescopes."

Damon broke into the management side of the network as Manager of Broadcast Operations for KNBC-TV,

NBC's owned and operated station in Los Angeles. His duties included seeing that programs got on the air, production of public service programs, union negotiations and a broad range of other managerial tasks. In 1957, he moved to New York, still in NBC's broadcast operations, as Facilities Scheduling Supervisor for the full network.

While he loved broadcasting, Damon was growing more and more interested in the broad spectrum of audio-visual communications, and also keenly felt the pull of his early interests in international affairs. When an opportunity came in 1959 to join IBM, he took it, first as assistant manager of film activities at Corporate Headquarters, and since 1963 as Manager of Film Activities for IBM World Trade Corporation. In 1969, responsibilities were enlarged to include Audio/Visual, Design and Broadcast Services.

Damon's department at IBM World Trade produces corporate and marketing audio-visual programs emanating from World Trade Headquarters in New York. These include motion pictures, video tapes, slides, audio cassettes and practically every other form of a-v media. In addition, Damon provides professional audio-visual guidance and counsel for World Trade Headquarters and for all IBM offices abroad, which are now located in over 100 countries on all continents.

"Our program materials," Jim Damon says, "are far from being mere translations of American films, tapes and other media designed for domestic audiences. Instead, they must deal universally with many cultures, many points of view, many sensitivities. In essence, what is done is to come up with something that is hopefully as many things to as many people as possible without emasculating its content. It's not easy, but we manage to do it most of the time."

As Chairman of the Audio-Visual Committee of the Association of National Advertisers for the past two years, Damon has been a foremost spokesman of the industrial audio-visual field. He has served on the Committee for the past ten years. This group offers counsel and concrete programs on effective communications via audio-visuals to the several thousand large corporations which are members of the ANA. Other activities of the Committee are seminars and conferences, and an Audio-Visual Newsletter.

Damon has also played active roles in the work of CINE (Council of International Nontheatrical Events), for which he serves as Financial Vice President and a member of the Board of Directors; in the Industrial Audio-Visual Association, where he was a

1971 Program Chairman; and in the Radio and TV News Directors Association, on which he was also a member of the Board of Directors.

"I don't at all believe in joining every organization in sight," Jim Damon says, "but I do think it's important to find ways to keep constant abreast of the state of the audio-visual art. You've got to get out and see what's going on. You can't just sit in an office. The several days a year that I spend serving on CINE juries are terribly important to me. Seeing the films that other companies are using helps to keep all of us on our toes. It's a great way to find new talent and capabilities that can be used in our own programming."

Damon's belief in the future of audio-visuals grows with each passing year. He is a strong proponent of the new cassette technology. "It's amazing that such a simple thing as the threading of a projector has hindered the dissemination of information so long," he says.

"Whether the audio-visual projection equipment be based on video tape or film or anything else," Damon says, "is not as important as that it must be demonstrably easier and less complicated. We've got to find ways to get our information out to more people more cheaply and with equipment easier to operate than ever before. I know it's going to come. Right now we are planning a company TV network which will let us bicycle communications programs throughout the U.S. and abroad. It has great possibilities for the rapid and efficient change of information that we have been seeking."

Away from his desk at IBM World Trade offices in New York, Jim Damon finds time to continue the activities in sports that he has pursued since boyhood—sailing and tennis are two of his keen interests. He lives with his wife in Stamford, Conn., has a daughter in a Maryland college, and is going to school in Connecticut.

"I consider audio-visual communications to be an important aspect of life today, and I feel very lucky to be a part of it," Jim Damon said recently. "Having the kind of enlightened company that I do to work with puts into doing things much more than just promoting a product. 'We're involved with a great many social problems these days, and we're finding opportunities with some of our films to work on ecological frontiers throughout the world. A guy who can be in a field endeavor where he's both satisfying himself on what he's doing, as well as hopefully doing something that's meaningful to other people, is a lucky guy.'"

LOW HERE'S A PROFESSIONAL 16MM ELECTRIC AT THE PRICE OF A BOLEX.

Because it is a Bolex

The new Bolex EBM Electric 16. With all the solid, dependable features you associate with Bolex. Plus built-in motor, and rechargeable 12-volt battery contained in the most comfortable grip you ever held in your hand. A compact, easy-to-handle, thoroughly professional 16mm camera. At a price that should put an end to rentals forever. \$1200 and it's yours to own.

The motor is electronically controlled for accurate, steady running at speeds of 10, 16, 24, 30, 48, and 60 frames per second, and 24 and 25 for synch sound. An easily attachable 16mm film magazine is also available.

The EBM has flickerless ground glass reviewing and focusing with 14X magnification. Plus a handy behind the lens filter

slot arrangement. And the camera incorporates the famous Bolex registration claw that assures rock-steady images.

Equipped with the Vario-Switar 16-100mm zoom lens with electric-eye through-the-lens light metering and power zoom, the EBM becomes the most automated professional camera. (NASA chose Switar lenses for use in the Apollo flights.) A dozen other top quality fixed focus and zoom lenses are available, all incorporating the bayonet type lens mount for instant lens changing and locked ring security.

Accessories for the EBM include a small, lightweight synch pulse generator that rides in a pocket. And a pocket-sized crystal control unit for wireless synch sound filming.

The Bolex EBM has everything a professional could wish for in an electric 16. At a price that sounds like wishful thinking.

TV Training at Fort Monmouth

**Army Signal School's TV Division
trains its own trainers to provide
instruction for 19,000 soldier-
communicators annually**

Twenty-one years ago this month the U. S. Army Signal Center and School at Fort Monmouth, N.J. purchased a one-camera television chain to investigate the possibility of teaching via the TV medium. In September of 1951, regular classes were inaugurated and out of 2300 hours of instruction in *Elements of Radio* that year, 100 were taught by television instruction.

This small but pioneering beginning has grown to such an extent that Fort Monmouth now has one of the largest and most active instructional television

systems in the world. During this time, over 21,000 programs have been prepared by the Signal Center's closed-circuit educational TV station, and the station is now "on-the-air" 10,482 hours a year bringing instruction to some 19,000 military trainees of the U.S. and allied forces who pass through annually.

"Our motivation at Fort Monmouth is to produce the best trained soldier-communicators in the world," says Lt. Col. Anthony J. C. Vinhal, chief of the TV division. "And educational television is playing a major part in

achieving this goal. We approach the problem of instruction with the belief that it need never be dull or uninteresting. To be completely formative, TV must be dynamic and visually exciting. Visual involvement plays a very important part in good learning."

Fort Monmouth's TV division is staffed by a small cadre of permanent officers and civilians who direct 46 enlisted military personnel actually operating the station. By Army regulation the output is entirely on closed circuit within the post to some 100 classrooms and conference rooms, as well as company dayrooms, recreational areas, three theatres equipped with large-screen TV projectors, and the nearby Patterson Army Hospital.

Twenty-three channels are currently used to transmit training films and tapes to the various classrooms. Originating materials is maintained on 16mm film, which can be sent on nine TV film chains, or as inch tape. As an example, on Monday, March 6, 100 programs were broadcast: 64 of them were 16mm film originations, 21 were on inch tape, and 14 were kinescopes of tape, and one program of news originated in the studio live.

While distribution of materials to classrooms from a central master

It has been the only method used thus far, a recent policy memo from the Signal Center and School's Instructional Methods division recognizes the growth of TV technology which may result in the availability and feasibility of small classroom videotape playback devices to give the instructor greater flexibility of use.

From their inception, instructional programs are requested by the school's Department of Instruction and turned over to a Project Officer in the TV Division, who supervises the determination of teaching methods to be used, scripting and production of the program. A project sheet is maintained for each job with sections covering (1) subject, (2) scope of the lesson, (3) objective, (4) target date, (5) approximate length, (6) technical advisor, and (7) training aids to be used. Great emphasis is made on getting away from "tech manual" language. The days of the 50-minute lecture are long gone. Most TV instructional programs are now of a limited objective single concept. Just one point is covered, reiterated and reaffirmed in 10 to 15 minutes until it is "locked-in." At these points are often produced in a framework of familiar entertainment TV procedure.

One consideration of training by TV is to accustom all the trainees to the medium, itself. Men are taken on a tour of the TV division's master control room and studios so that they understand exactly what is happening. This overcomes any preoccupation with the equipment, itself, during classroom sessions, and breaks down any lingering ideas they have to regard television only as entertainment. An important part of the Signal School's procedure in TV instruction is perfect maintenance. Monitors are kept in first class condition, or they are repaired immediately. Great stress is made of exact video and audio levels in each classroom, so that technically, program presentation is as good as it can possibly be.

Today's student soldier, many times turned off by traditional teaching methods, has been found to be more attentive to the TV screen if the methods of instruction used can continue to pique his interests. And if he doesn't understand the screened lesson the first time, the student can get a replay of any film he needs by pulling the master control and requesting a repeat after hours in his company dayroom.

In addition to instructional programs, WFM-TV also broadcasts news programs, complete with commercials and various items of post interest (safe chaplain services, etc.). According

to Murray W. Tesser, Assistant Chief of the TV Division, the production of news and commercials is the very best kind of training for producers of teaching films and tapes. It teaches them timing, how to compress information into usable form, and how to get to the point quickly.

Training the trainers is a most important part of Mr. Tesser's job. He and his civilian associates in the TV Division are a professional staff providing a stability and continuity to the television training functions of the division. The average soldier-staff member spends no more than two years in the Signal School. It is the management's task to quickly train these men into thoroughly qualified producers, directors, writers, cameramen and television technicians. They have done such an efficient job over the years that not a few TV division graduates have gone on to good audio-visual jobs in industry.

At the present time, all training films at Fort Monmouth are in black-and-white. In a study made in 1962, Dr. Kanner, of the Office of the Chief Signal Officer, determined that no perceptible difference could be made between the teaching effectiveness of b/w and color training films. Nevertheless, it seems likely that if any major changes are contemplated in the TV division's bank of equipment,

color would be introduced, just because most people are more and more psychologically attuned to color TV, and the very fact that the picture was in b/w could be distracting.

Fort Monmouth's equipment consists of two-inch RCA recorders, playbacks and image orthicon cameras, many of a rather venerable age, if such a statement can be made about anything as young as TV. But the equipment has received, as can be imagined, extremely careful Signal Corps maintenance throughout its life, and operates as good as, perhaps better than, new.

Murray Tesser has introduced a number of interesting innovations into the TV division's equipment line-up. All projectors used in indirect projection, for instance, have irises installed on the lenses for exact control of light levels. "Too bright is not right," he says.

Another projection cabinet, known only as Tesser's Device, combines in one cabinet a TV monitor in the center with two rear screens on either side fed by built-in slide projectors. The point is to "hold" important information on one screen or another while the monitor screen describes detailed moving operations in the center.

The principal philosophy followed in all training activities of the TV division is to (1) grab them quick and hold them, (2) involve them, make them part of the program, and (3) make it contemporary—fit the subject to the times. Involvement is a key consideration, and it is achieved by incorporating problems, questions, and other techniques in the TV material to insure student participation and response.

The Signal Center and School has analyzed from time to time the results it is obtaining from television instruction, and the advantages TV offers over other methods not as readily available in normal classrooms. Here are some of the conclusions:

- (1) TV brings "live" or recorded views of equipment or demonstrations from remote locations into lighted classrooms in a manner difficult to duplicate in any other way.
- (2) It permits easy integration of films, slides, graphics and special training aids into the presentation.
- (3) Permanent monitor installations in classrooms save the time of setting up projection equipment.
- (4) TV distribution increases the use of all visuals and training aids.
- (5) TV gives classroom instructors an opportunity to observe presentation techniques of other instructors and to observe students while they are watching a TV presentation. □

Lt. Col. Anthony J.C. Vinhal, chief, TV Division and **Murray V. Tesser**, assistant chief, discuss TV script in front of camera.

SSgt Melvin Holt uses television to instruct a class in strategic microwave.

Industrial concerns turn to tape-to-film transfers to solve distribution problems

You've figured out what you want your program to say; you've targeted your audience; now how do you go about getting it to them?

Not too long ago, you'd sit down and work it out: movies? stripfilms? slides? videotapes? and you'd choose your medium and stick to it throughout the project.

But now some of the most rapidly growing techniques in all of the audio-visual world: transfers, are providing new flexibility. No matter what kind of material you started out with, it can easily be transposed into another media to fit the audience, the location, the times, and the budget.

You've got slides and you want a movie? Easy—the Fotomation process (it has several other names, too) can transpose slides into a very dynamic movie with zooms, pans and every other trick in the book that you desire.

Those same slides will turn into a filmstrip; you can put them on videotape; they make great illustrations for booklets. The universal medium.

But what about 16mm motion picture footage? You can turn it into slides and filmstrips, videotape, blow it up to 35mm, reduce it to 8mm. Another universal medium.

In fact, almost any medium can now form an excellent basis for transposition into another one. And herein lies the solution to a great many audio-visual distribution problems.

Interfilm transfers have been somewhat familiar to all of us for some time. Many A-V men have had experience with slide-to-movie, film-to-tape, blow-ups and reductions. But the problems of quality tape-to-film transfers have been troublesome and baffling to

video technicians for a great many years.

Tape-to-film transfers are not new, of course. Almost from the beginning of TV broadcasting we've seen kinescopes of originally live or taped programs on the air. But, as anyone who has seen an old "I Love Lucy" kine can attest, they have been pretty bad—muddy, fuzzy and distorted.

When the use of videotape in industry became more and more common, AV men began to look for some means of combining the economy and immediacy of videotape production with some of the advantages of cartridge film playback. Recently the technology of tape-to-film transfers has improved to the extent that for many industrial companies, it has become a recognized system of information distribution.

New England Telephone & Telegraph, for instance, was a pioneer in the use of television for training purposes. But the company found that the complexity and expense of installing monitors in all the locations where training sessions were desired was forbidding. One of the answers to this problem has been to transfer videotaped training programs to super 8 cartridge film for playback on simply operating relatively inexpensive s8 sound motion picture projectors. Edward Palmer, A-V Supervisor, has found this to be a most satisfactory solution to the logistics of his company's training sessions.

One of the first independent producers to use a tape-to-film production technique was Jack Moss, of Moss Communications, Inc., New York. Four years ago, Moss made a series of training programs for his client, S&H Green Stamps, which are still

being used with great success.

Moss recognized that videotape production—using broadcast quality two-inch tape—had advantages which were hard to match for certain situations. "The whole secret is to know the medium thoroughly and to make extensive use of advance planning," Moss says. "With tape, post-editing destroys much of its economy. You've got to know exactly what you want, be thoroughly rehearsed, and get in and out of the studio quickly."

Moss Communications' S&H series and a training series for dealers that the company has recently completed for Shell Oil, illustrates what can be done with tape-to-film. Production took place at National Teleproductions' studios in Indianapolis using the band top quality two-inch equipment. Production was carefully planned with every minute detailed in advance, but actual studio time was kept to a minimum.

With the chroma-key possibilities of TV available, it was possible to shoot in front of a great variety of backgrounds, pre-shot on 35mm slides, so that foregrounds and backgrounds

S & H Green Stamps sales training series in 1968 was a pioneer tape-to-film project.

Careful planning is a prerequisite. Jack Moss, producer of S & H and Shell tape-to-film programs plots cast movements in advance.

"You can change horses in the middle of the stream and often come out just as well"

icked exactly right together. Other editing effects made on the spot during production included split screen, linking objects and inserts. While it can be done on film, it can also be quite expensive if too much of it is required in one film.

Moss estimates the client's savings on the S&H and Shell films at approximately 40 percent. Shell is using its in-s8 cartridge projectors at 40 roller training centers throughout the country. As an example of the versatility of transfers, Shell is also using cassettes in the training program with illustrations made from the color film made from the original tape. Quality? Very good.

But there is more to the tape-to-film transfer system than production on two-inch tape. Windsor Electronic, New York videotape full service house, has made a specialty of tape-to-film transfers for a number of years. With equipment custom-built by its own engineers, Windsor is now providing transfers of half-inch and one-inch helical scan tapes that would have been impossible several years ago.

One of the major problems of transfers from helical scan tapes is the lack of horizontal time base stability of many small format recorders. Windsor has licked a great many of these problems by the use of regulating controls which can "straighten out" the picture on the monitor before it is photographed, and which carefully match, electronically, the camera's speed to that of the videotape recorder.

One Windsor transfer, made two years ago, is probably the first program originated on half-inch tape to be made into a television program. It consisted of an interview with tennis star Arthur Ashe at Forest Hills, which was later transferred to 16mm film and played on a number of TV stations in the Northwest.

Windsor is currently doing both color and color tape-to-film transfers for such clients as Insurance Company of North America, University of Alabama, New York Telephone Co., Carter Corp., New England Telephone, and several dozen others.

An interesting side-light is that a number of companies are producing single camera video set-ups, getting transfers at Windsor to 16mm film and then going through the editing process at this point. Windsor provides on-the-premises film processing, print-

ing, and film, as well as tape, editing facilities and services.

With the various systems of clearing up stability and contrast problems that the company has developed, Windsor's Bob Henderson and Bert Goodman believe they have the facilities of enhancing videotape so that a fair-quality tape can actually be made into a good quality film. While recognizing that the video cassette player may someday change the necessity for tape-to-film transfers, Henderson and Goodman see it as a number of years off. Many problems, such as international differences in scan lines and power supplies will have to be solved before tape playback becomes as easy as film is today.

Another tape to film service house,

Electronic regulation corrects horizontal distortion before transfers are made.

Bert Goodman, of Windsor Electronic, supervises transfer of Sony format half-inch tape to 16mm film.

with offices in New York and Chicago, is the Color Center, which provides tape to film transfers for such clients as General Electric, J. C. Penney, NBC, Associated Press, John Deere, DuBois Chemical, Southwest Bell, Travelers Insurance, Ford and Chrysler.

Jack Cook, president of Color Center's Videotran division, favors scrapping the term "kinescope" completely. "There is just no comparison between the work modern transfer houses are performing and the old 'kine' which was little more than shooting off a picture tube with no regulation at all," he says.

Videotran uses the Electronic Beam Recorder developed by 3M, and expects delivery of one of 3M's first color EBR's within the next few weeks. This \$138,000 apparatus exposes the film directly to the video gun, with no tube in between.

While there is no doubt that the EBR produces a sharper image than shooting off the tube, it is a demanding process. If what you put into it is sharp and stable, the output is great, but imperfections show up very strongly, too. Good videotape to film transfers on the EBR are good enough to show on the theatrical screen, and one series of programs on auto racing is now showing at a midwest theatre chain.

Hoffman La Roche, the large pharmaceutical concern, is currently using tape-to-film transfers made on Color Center Videotran's EBR on super 8 projectors in the hands of 600 detail men.

Most of the tape-to-film transfer houses—other prominent labs doing this work are Byron, in Washington; Consolidated Film Industries, in Hollywood; DuArt-Rombex, in New York; Image Transform, in North Hollywood; Motion Picture Labs, in Memphis; Reeves Production Services, in New York; and Technicolor, in Hollywood—will provide double or single system sound prints, and reversal or positive prints in either b/w or color.

In the present state of the industry, with continuing indecision about production and dissemination methods acting as a hindrance to audio-visual use, transfers are providing a valuable service.

You can change horses in the middle of the stream, and often come out just as well. □

A Custom-Made Prompting System

Honeywell's top executives deliver their lines like skilled actors in tight-deadline lip-sync film

The projection of the script is visible to the speaker on the two screens even when he is facing a battery of large Colortran lights.

To the right of the model in this mid-filming shot at Honeywell, Inc., is a 35mm slide projector, sound-proofed with a foam-padded blimp, and focused on two Kodak Ektalite projection screens.

For 25,000 workers around the globe at General Electric's computer-producing facilities, the news that their division had been acquired by Honeywell, Inc., caused an intensely personal reaction. They now had a new employer, and it was one they didn't know much about. What kind of company is Honeywell? What would be the new organization? What products do they make besides computers?

These questions and many more were answered immediately. About the same time that the press associations' teletypes were transmitting the message to the general public, the GE personnel were being seated in 25 motion picture theaters around the world.

Color flashed on the screen, and music on the sound track came on. Then James H. Binger was shown standing in front of the company's Minneapolis headquarters.

"I'm Jim Binger, Honeywell's chairman of the board," he began, "and I want to welcome the 25,000 GE workers to our more than 100,000 employees..."

He then provided a capsule history of the company and listed some of its major manufacturing lines, illustrated with film clips showing rocket launches, computer centers and other Honeywell-made products in operation.

Opening the door between his office and that of Stephen F. Keating, Honeywell's president, Binger introduced Keating as "Steve."

"... We operate on a first-name basis," Keating explained. "We depend more on people than procedure..."

Before the 16½-minute film began its course, the viewers had already been introduced to Edson W. (Dick) Spencer and Clarence (Clancy) Spigle, executive vice presidents.

Binger concluded the filmed presentation by saying: "Again, welcome to Honeywell. We're looking forward to working with you." And the subtle voice stress in the last sentence was on the penultimate word "with."

Throughout the motion picture, the top executives addressed themselves directly to the viewers by looking straight into the camera. This eye-to-eye contact was maintained for virtually all of the footage that was done in lip sync—about 95 percent of the film. The effect was a combination of spontaneity and sincerity.

Yet the entire film was produced without a rehearsal. The five men had all seen, and had a chance to study the script in advance, but they did not have to memorize it. In addition, the entire production schedule—from the first plotting of camera angles to the final distribution of release prints—

Office furniture should do more than just take up space.

Ours sells.

the MPO Videotronic Super 8 projector console is a classy little model made to be a permanent fixture with a furniture-quality teak cabinet. It was specially designed to show motion pictures at point-of-sale and for educational uses, in show-rooms, reception rooms, offices. The adjustable base permits screen to be tilted upwards or downwards 14 degrees for ideal viewing angles. All controls are conveniently located on top for maximum accessibility. The remote, self-rewinding cartridge slips into the side. High-quality daylight viewing with beautiful undistorted sound, and its ease of operation is unchallenged in the industry. Now that's what we call office furniture that really works for you. And your company.

Optional:
Matching teak stand.
Ideal for showroom use.

was accomplished in only 13 days.

"When we were first alerted that such a film would have to be made and that we'd have a very tight deadline for it, we started work immediately," relates Harold W. Daffer, Honeywell's corporate film producer.

The task was complex enough to necessitate more than 100 camera setups to ensure variety of viewpoint and resulting audience appeal. However, the technicalities posed no special problem for Daffer, who has been making motion pictures for Honeywell since 1948.

But he and his assistant Ron Dow, believe that it is an unfair imposition upon executives to ask them to "wing it." Moreover ad libbing often costs valuable time in successive retakes. At the same time they couldn't ask these men to take time out from their executive tasks to rehearse. Even if they could, time was in short supply.

"We'd worked with 'idiot cards' in the past and knew how unsatisfactory they were," Daffer comments. "We'd have a lot of copy to be hand-lettered and then there'd always be the danger that one of the cards would topple at a critical time.

"We also felt that teleprompters wouldn't be satisfactory because the type is too small. And with a teleprompter, many of the men would have to wear their glasses, and that would create a glare problem."

He and Dow devised a simple, but highly effective, solution. In a specially built frame that could be angled both horizontally and vertically as needed, they clamped two Kodak Ektalite projection screens, cut down to 18 x 24 inches.

Between the two screens, they left an aperture just wide enough for the lens of the 16mm Eclair motion-picture camera, which was connected to a Nagra tape recorder to produce synchronized double-system sound. Then to the sides of the speakers, out of range of the camera and varying in distance for long-range, medium, and close-up shots, they worked out positions for placement of a 35mm slide projector.

To keep the image at virtually the same size regardless of distance, careful plottings were made for the use of 3-, 4-, 5-, and 7-inch lenses. Half of the projector's throw was focused on the bottom half of the top screen, and the other half on the top portion of the bottom screen.

Because the aluminized, concave surface of the Kodak screen provides an image six times brighter than that of conventional models, the projected images were visible to the speakers

even though they were bathed in a multiple-light illumination that permitted the use of Eastman Ektachrome commercial film, 7252.

The movie script was written by Jim Read, manager of the corporate merchandising department. After it had received final approval, one typed copy was cut into trial-and-error formulated segments. While right-hand margins were irregular, the typescript was about 5½ inches wide. The depth varied from three to six double-spaced lines for each top and bottom screen projection, with white space between the two type blocks.

All told, 50 such two-part segments were created. These were then put on the shooting board of a Robertson process camera and exposed in reduction to Kodalith ortho film, type 3. This provided white letters on a black background for maximum visibility.

Before the filming, Chuck Bowen, staff motion-picture photographer at Honeywell, Inc., carefully adjusts the lens of his Eclair camera between the frame holding two projection screens.

Each slide took only 15 minutes to produce in a Kodalith film processor model 324, Dow notes, which permitted quick remakes if an executive wanted to revise his lines.

"We could have simplified the job by using only one screen and not splitting up the slide image of the script segments," he says, "but that would have defeated our purpose. We wanted the men to be able to look directly into the camera lens.

"When you know how the picture was made, you can spot flickers of up-and-down eye movement in some scenes, but we're confident that they're not apparent to the majority of the audiences who see the film for the first time."

The movie was shot in the offices of Binger and Keating, except for the film clips of products, the introductory footage that was shot in front of Honeywell's headquarters building, and the

sequence with Honeywell Information Systems' Spangle that was done in Waltham, Massachusetts, office.

For two days, the top executives to work in other offices while Daffer and Dow and one of Honeywell's staff cinematographers worked on camera setups, lighting, and screen projector placements with stands. Then they were ready to begin the days of actual shooting.

Through the artful selection of camera angles, the completed film conveys the impression that the executives were sitting informally together throughout most of the picture. To conserve time, however, no more than two of them were ever present for the shooting of any segment, and most segments required only one man at a time.

"When you're working with professional actors, you have no problem with their waiting the necessary seconds after you call 'action,'" Daffer notes. "Newcomers, however, often so anxious to hit on cue that they'll start speaking immediately, coming right in on top of your 'action'."

"Using these screens, we were able to avoid any possibility of that happening, because Ron controlled the remote control. He'd just keep the volume down low so they couldn't see the lines and turn it up only when it was time for them to speak. The men came so confident in their brief exposure to the system that two of them even ad-libbed comments."

As an indication of how Daffer and Dow tried to anticipate any possible technical problems they built a special, foam-padded blimp for soundproofing the slide projector. Between scenes, they turned off the projector lamp and let the fan run to dissipate the heat buildup.

After the 6,000 feet of film had been processed by Galaxy Film Service in Minneapolis, Daffer and Dow edited and cut the work prints, dubbed in the music selections for the sound track. Galaxy then did the final forming and produced the reprints.

Although originally conceived as an introduction to Honeywell for the employees absorbed in the GE acquisition, the film has since been shown extensively for showings to Honeywell employees, especially at meetings of 25-year veterans.

"As Steve Keating says, we're a company that operates on an informal first-name basis," Daffer says. "The film's projection of apparent spontaneity and that all-important eye-contact between speaker and audience, this feature illustrates our philosophy pretty much better than anything else could."

parably interdigitated with my image as a creative individual. I tell you a story which demonstrates what I mean.

I have a teen-age daughter, and when she was about six years old we were having an argument, which I won because of my superior size and strength and facility for language. She brooded for a while and then decided to insult me by explaining all the things that were wrong with me. Among other things, my stomach was too fat, my hair was too thin, I spread peanut-butter too thick on her sandwich, I wore the wrong clothes. I took all this calmly, but finally she said, "... And besides all that, you're not a writer." Stung to the core of my soul, I clutched my solar plexus and asked: "What are you talking about? You've never read any of my books!"

"No," she answered, "But you need my report card and my teacher didn't even read your signature. You're a terrible writer!"

Well, Readers, it's true that I had terrible handwriting at that time, but that I still do. But I believe that I am a good writer, and I know for a fact that the day I stop believing that I will be unable to come up with new

ideas for my clients, and for their clients.

I am not a writer because I come up with new ideas. I come up with new ideas because I am a writer. □

For readers of the last issue: The grammatical error in "Paradox" was the line: "If it wasn't for the money, I wouldn't do it." This is a condition contrary to fact and therefore requires the use of the subjunctive. It should read: "If it weren't for the money I wouldn't do it." Although there were other questionable errors in the article, they were acceptable colloquial usage, or ineffective copyreading. This was the only true error of grammar.

camera eye continued

service activity of member Eugart Yerman (Holiday Inns, Memphis); Mike Ritt's manifold duties at Combined Insurance headquarters in Chicago; Jim Damon's worldwide assignments for IBM World Trade out of Manhattan headquarters; Dr. Lee Coyle's setup at Ohio Bell in Cleveland, to name just a few of the many.

One thing is sure: these men are not

"average". They observe one common credo "know thyself" and thy limitations. They're not afraid to reach out, among their fellow-members when occasion arises or to the best in creative or technical knowledge when corporate demands dictate.

When is IAVA at its best? Perhaps in the free exchange, without fear or favor and in the absence of suppliers, of helpful ideas, in the presentation of member case histories, including individual successes or failures. Perhaps in just being dedicated to the idea that through better communication to all the "publics" where their corporate interests may lead, enlightenment and understanding can be better achieved through the imaginative, technically-excellent use of sight and sound.

IAVA through all the years has been an inspiration to us at BUSINESS SCREEN, not only as a fount of publishable material but as the "ideal" of wise use of sight/sound media and its continued upgrading within the companies who need it most and should use it best.

We cherish the tribute paid us many years ago: the IAVA "Award of Merit" given us "in acknowledgement of outstanding contribution and service in the audio-visual field." That's all we are: servants to the cause and to those who serve it. □

Planning a Board Room?

TRAINING CENTER, DISPLAY BOOTH OR CONFERENCE ROOM?

Consider a sophisticated visual display system using RANDOM ACCESS PROJECTORS. Professional projectors that give you instant access to any slide, in any sequence or at random, on remote command. We can provide you with numerous control options for Kodak's Ektagraphics RA-960 projector, or we can specifically engineer a Mast Series 137 projector for your precise application. Off-the-shelf control options include multiple remote command systems, dual-projector operation and panel-mount slimface control. Also pushbutton "keyset" control, computer interface, dissolve systems, self-contained display units and hi-intensity modules. Call us collect or mail the coupon for full details.

Instead of trying to be
good at everything...

we prefer to specialize...and be BEST!

A "one-man band" is fun to watch. He's adept at handling many instruments, but he can't possibly match the great technical skill of a trained soloist.

If you want flawless performance, select a specialist.

Here, at Frank Holmes Laboratories, we have specialized in filmstrips and color slide duplicates since 1948. They're not a "side line" with us. They're our only business.

When you've concentrated on doing something well . . . and spent 24 years at it . . . you're likely to do it very well indeed. And we do.

We routinely handle problems often considered insoluble.

We have designed much of our own equipment . . . developed an exacting control procedure . . . and instilled in every department an outstanding enthusiasm for perfection.

Our promise to you: No matter what your material is, we can do more with it — and get more out of it — than anyone else.

The reason is simple enough. After all, no other lab in the world knows as much about processing filmstrips and color slide duplicates as we do. Or cares as much.

Write today for our new free catalog!

Lloyd Abernathy, Vice President
James Bamister, Lab Mgr.
Ralph Canada, Customer Serv.

Take this 30-second

photoquiz

Don't feel bad if you fail* because you'll win a
CFI Film Footage Estimator.

1. How much will it cost me to have a 23 minute 16mm Eastman color release print made if the laboratory charges 7¢/foot?
2. How many 35mm feet would I have if I blew up my 23-minute 16mm picture?
3. What about reducing my 23-minute 16mm film to Super 8mm—how long would that be in Super 8mm?
4. How much ECO can I have developed for \$250 at 6¢/foot?

***We'll even send you one if you don't fail**

Undoubtedly you could answer these questions. They're not really hard. But you probably couldn't do it in 30 seconds—you'd need a little more time, and perhaps even a pencil and paper.

That's why we're making our Film Footage Estimator available free to interested professionals in the motion picture and audio-visual industries.

It's handy. It has all the information you need built right into its easy-to-read sliding scales. Answering the above questions in 30 seconds would be a cinch if you had one. And it's especially valuable for budgeting and planning.

How do you get a CFI Film Footage Estimator? Simple. Just send in the coupon on this page or write to us on your letterhead. We'll send you one with our compliments, along with any special service information you may need.

All right, send me a Film/Footage Estimator. Let me prove to myself that I can answer those questions in 30 seconds.

REVIEWS AND PREVIEWS OF NEW VISUALS

GE Film Says Increased Street Lighting Cuts Down Crime

In Washington D.C., highly improved street lighting has been described as responsible for reducing night crime in many areas of the city by as much as 35 per cent.

As outlined in a new film, *One Glow of Hope*, sponsored by General

Electric Company and Newsweek Magazine, the District of Columbia Highway Department efforts began in 1968 with less than \$50,000 for initial lighting installations. Public demand for more light led to the acceptance of the program and the approval of additional funds for further improved street lighting.

The relighting program was initiated to sharply increase light levels to reduce dark shadowy areas of potential danger, and help make the streets safer. This was accomplished by using a modern high-pressure sodium lighting system as well as designing a special conversion kit to install in the historic Washington street globes.

PHONE: (212) 245-8900

Light levels have been tripled along Pennsylvania Avenue in the nation's capital as part of Mayor Walter E. Washington's program to "return the streets to the people."

Mayor Walter E. Washington speaking in the film, says, "The way that we're going to make the long-term decrease in the total crime rate that we want is by the government moving out with this initiative of citizens participating, cooperating, because they have something that they really feel and really know is making the difference."

Filmed by Vero Productions in Darien, Conn., *One Glow of Hope* was produced and photographed by Abbot Mills and edited by Josef F. powic.

In addition to the film, which is being distributed by Modern Talking Picture Service, the communication program will include a slide presentation describing how various cities have utilized high intensity street lighting.

Trash and Garbage: "Things Worth Saving"

Large-scale resource recovery from America's growing volume of municipal solid waste—trash and garbage—is the theme of a new film sponsored by the U.S. Environmental Protection Agency.

solid by the National Center for Resource Recovery, Inc., a Washington-based non-profit corporation. While limited quantities of consumer products in today's solid waste stream are being recycled through voluntary centers cooperating with industry, future systems will mechanically separate valuable resources for recycling—aluminum, steel, glass and paper—to reduce the solid waste load. The residue following separation offers promise as a fuel for heat and electrical systems.

Things Worth Savings was produced by Stuart Finley, of Falls Church, Va. It is 14-minutes long and will be made available for free loan use on television, in schools, and by civic groups at the National Center for Resource Recovery. Prints may also be purchased for \$65.

Recreational Vehicles: The Way To Go"

There are four million recreational vehicles—RVs—on the road today. Half a million more are being produced annually. Obviously, for a lot of people, RVs are "The Way To Go."

...ning a portion of "The Way To Go" in Arizona's Superstition Mountains, the Pilot Productions' crew begins a sequence with close-up photography of desert flower.

A new film, commissioned by the Recreational Vehicle Institute and produced by Pilot Productions of Evanston, Ill., covers the RV life as seen during 15,000 miles on the road, winter and summer, while conducting over a hundred filmed interviews. These were principally motor home and camper owners, but the group also included park rangers, campground owners, a banker and a storekeeper.

"We caught people on film pretty much as we found them," director John Dederick comments. "And because we didn't have any vehicle scheduled to roll past our camera when we were after scenic material, we sometimes found ourselves standing roadside—or even on a mountain— for a couple of hours before

we got just what we wanted in the normal flow of traffic."

According to RVI National Director Mike Radigan, the new film replaces an older one, "and presents considerably up-dated information on one of the fastest growing sectors of our economy—recreational vehicles."

Systematic organization by Pilot's director and film editor eased somewhat the Herculean task of editing the 13,000 feet of film and almost seven hours of conservation into a lively and interesting half-hour documentary.

The process began with preparation of a full transcript of recorded dialog. From this 124-page "volume", Dederick

and his associates selected comments representative of the entire field of RV activities. These comments were then transposed to index cards and given a code designation, and the film segments which they represented were edited out of the mass of film and given a corresponding code. Card organization then was used to determine the film's sequence.

A preview of the new film was made before 300 members of the RVI at the Institute's recent annual meeting in Louisville. In a planning stage at RVI, according to Radigan, is an advertising campaign to publicize the movie and its availability.

FEATURING NEW EQUIPMENT AND SERVICES

16mm Camera

ECLAIR CORPORATION has announced a new camera lens combination in the ACL with the new 9.5-57mm Angemex zoom lens in C-A-L mount. Weight 9 lbs., 4 oz.; length 19 inches. Said to sit lower than other 16mm cameras for

news and documentary use. New Eclair accessories are a light-weight hand grip which mounts on bottom, side or top; and two pilotone modules which can mount on side. 73 South Central Ave., Valley Stream, N.Y. 11580.

16mm Camera Accessory

ARRIFLEX CORPORATION has a new remote control for the Arri 16BL working with the Arrivox-Tandberg recorder.

Cameraman can control stop-start functions remotely and automatically from the camera. Parts for the remote control cost \$80 and labor is \$36 at authorized dealers. 25-20 Brooklyn-Queens Expressway, Woodside, N.Y. 11377.

16mm Projector Accessories

ALLIED IMPEX CORP. has announced new accessories for the Bauer P6 Studio double band 16mm sound projector: (1) A four-track magnetic head assembly for multi-lingual recording and reproduction; (2) remote control unit for remote forward or reverse with lamp "on"; (3) mechanically interlocking gear for interlocking two P6's; (4) five-digit frame counter; and (5) 35-watt Hi-Fi speaker. 168 Glen Cove Rd., Carle Place, N.Y. 11514.

Super 8mm Sound Projector

ALLIED IMPEX CORP. has announced a new Bauer S8 sound projector, Model T16 with features particularly useful for training and instruction situations, such as instant replay, high light output, quiet film transport. 168 Glen Cove Rd., Carle Place, N.Y. 11514.

Slide Sync Recorder

3M COMPANY has added a luggage type case to its Wollensak Mod 2550AV slide sync cassette recorder, now designated Model 2547AV. Case measures 21½" by 14½" by 8½" and weighs

27 lbs. without projector. Case accommodates Kodak Carousel projector, slide tray, lens and cords. Price is \$379 without projector or accessories. St. Paul, Minn. 55101.

Slide Sorting Panel

RICHARD MANUFACTURING COMPANY's Idealite #010 slide viewing equipment has a new accessory available.

Look at things both ways

Wyman-Gordon Co. does—with two Da-Lite® Screens!

Wyman-Gordon Co. has a reputation for looking at things both ways before they make an engineering decision. And, they made a sound decision—projection screens by installing both a Da-Lite 6 x 12 rear projection screen plus a 7 x 7 Executive Electrol®.

The Da-Lite Executive Electrol disappears into the ceiling when not in use to keep the conference room uncluttered. And, with the Da-Lite Rear Projection screen, the remote-controlled projectors are out of the way, too!

Da-Lite offers a complete line of electrically operated screens for easy "hang-up" or built-in installation in sizes from 50 to 30 square feet. A full line of rear projection screens.

For all the facts, and the name of your nearest Audio-Visual Specialist, call or write Dept. 85.

DA-LITE

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services —RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

Free Lube Job

If you use cartridge-load or continuous-loop projectors, you know that film friction can be a real show stopper.

The solution is NO-EN® lubricating treatment. It keeps film from sticking in the projector or cinching in the cartridge. It removes burrs caused by slitting or processing, and keeps film flexible longer.

See for yourself, free.

This ad is worth 800 feet of NO-EN treatment on your next print order. (And if your next job calls for more than a lube job, don't worry. We're AV specialists in all phases of 8mm, Super 8 and 16mm film printing, processing and developing. Right down to loading any brand of cartridge.) Send it to us—one free coupon per customer, of course. Good through the end of 1972.

processed nearly 200,000 bookings of sponsored films in a single month recently. A new record.

One of Modern's clients, Aero Mayflower, has now reached 154,062,784 views with its film, *The Mayflower Story*: 13,827,062 non-theatrical, 7-273,157 in theatres, 448,765 in airport movie lounges, and 132,513,800 on television.

Sony Corporation has announced a Trinitron color TV monitor compatible to both American and European systems. A switch enables either 525 line 60 field or 625 line 50 field signals to be received. As a result, programs made in the U.S. and Japan for the Sony U-Matic Videocassette system may be played back in Europe without interformat transfer. Target date for availability is early 1973.

Creative Visual Dynamics, a Colorado-based company specializing in Super 8 film production, has broken ground on a new 10,000 square foot studio encompassing a 2000 square foot sound stage in Aurora, near Denver. In addition to new permanent facilities, CVD is also operating its own version of the Cinemobile, a specially converted Winnebago Motor Inn.

Morris Schwartz, founder and Board Chairman of Kalart Victor Company, was honored by the firm's employees in April on the occasion of the company's 50th Anniversary. Starting with flash synchronizers for press cameras in 1922, the company has grown to be a major supplier of audio-visual and ETV equipment to industry and education.

Firestone Film Shows How to Handle Complaints

Recognizing that the real problems of service are people, The Firestone Tire & Rubber Company has issued a new training film—to be shown to all of its sales and service representatives—detailing how to handle customer complaints.

Jack B. Scarcliff, Firestone's director of consumer affairs, said the film concept is another step in the company's "we care" program.

"We must be prepared to recognize the customer's good will and faith in Firestone products," the Firestone executive said. "This is what our film is all about—people dealing with people. It explains how to deal with a customer who has experienced a problem with a tire or other merchandise."

"The first person greeting a customer when they enter a Firestone service center must practice the principles of consumer relations which the company follows as policy," Scarcliff explained. "Today's consumer is a new breed—better informed and more demanding."

The film reviews Firestone's consumer relations policy, the complaint adjustment procedures and outlines steps to be taken in case of a customer complaint.

It is being distributed to all Firestone district offices, whose representatives will show it to personnel at company-owned stores and independent dealers.

"Eighteenth-Century Fox" Shooting Again

Colonial Williamsburg's film unit, self-styled "Eighteenth-Century Fox," is in mid-production of a new film, *The Blacksmith*, which will promote the historic colonial capital to group and television audiences throughout the country.

The Blacksmith, which is the 7th in a series of craft films on Williamburg, will deal with the craftsman's role as general repairman and maker of important items needed throughout the daily life in the 18th century. Unlike other Colonial Williamsburg crafts films in which craftsmen have made one or two pieces, the blacksmith will repair a fireplow, crane, make nails, an axe, an accessory for a cannon as well as a decorative iron frame for a shop sign. The film will demonstrate the importance of the blacksmith in the home, industrial, agricultural, and military life of the colonial period.

Local Film to Combat Drug Problem

An approach to the problem of drug prevention, concerned Paterson, New Jersey businessmen and citizens, together with the Model Cities of Paterson, have raised funds for a new film to be made, describing a new drug education technique being initiated in the city's public school system.

The film will be produced by Gero Bierstein, Inc., Paterson's advertising agency, and Crabb-Brown Associates, Inc., New York City motion picture firm. George Gero, president of the advertising agency, coordinated the drive for funds from business and industrial firms and received a matching grant from Model Cities, through the state Department of Community Affairs.

The Veritans Club, a service organization in the city is serving as the disbursing agency for this non-profit, public service venture.

The film will be built around the "per group" concept developed by the city's drug fighting agency known as Paterson United Against Drug Abuse (PUADA). According to PUADA's executive director, Hal Gordon, the "per group" concept involves the development of adolescent leadership in drug education and prevention. The concept involves the use of students working with other students in an effort to curb the use of drugs and to defeat the trend toward the use of drugs as a life style.

Auto Service Industry Replies to 'Certain Clamorous, Self-Appointed Critics'

Let It Fixed and Move On, a new film sponsored by the Auto Service Industry Association, is aimed at everyone who owns a car, who ever gets in a car, to everyone whose livelihood depends on safe, economical automotive transportation, to everyone whose food supplies, whose medicines, whose everyday necessities are truck-transported." That's about all of

ASIA is composed of more than 500 independent automotive wholesalers, warehouse distributors, heavy duty distributors, manufacturers and manufacturers of replacement parts, tools, equipment, chemicals, paint, refishing materials, supplies and accessories. The theme is that ASIA members are doing a great job for all of us.

The 14-minute short is being distributed by Modern Talking Picture Service to high schools, community groups, employee audiences and also TV stations.

The Plio-Magic[®] Freight-Watchers

(They'll cut your shipping costs 40%)

With recent and proposed increases in postage and shipping charges you should be looking for a way to cut film handling costs.

Lightweight Plio-Magic reels, cans and cases are the answer. We can cut your shipping costs 40%.

How? By tipping the scales at less than 40% of what metal and fiber containers do.

For example. A 1200-foot metal reel (with film, can and shipping case, ready-to-go) weighs about seven pounds. Or, in terms of your pocketbook, a ton.

A Plio-Magic 1200-foot reel (with film and shipping case, ready-to-go) weighs only about four pounds. Or about three pounds less than its metal counterpart.

Think of the savings. On our three pound example alone you would save \$3.84 if you sent your film first class. Now multiply that by ten thousand cases a year. Breathtaking, isn't it?

Of course, we wouldn't ask you to sacrifice protection just to save money. Not by a long shot. Our Plio-Magic reels, cans, and cases defy abuse absolutely. Drop one and watch what happens. Nothing. No dents. No chips. No scratches. No damaged film. Nothing.

In other words, Plio-Magic offers you better protection than metal, reduces your shipping expense and costs less to begin with.

Now what could be better than that?

If you'd like information on our complete line of film handling equipment, send for our catalog.

Zoom Lens Repair

All optical products and repairs made at Century are multi-tested on our specially designed optical benches. One of the many tests your lens will receive makes use of our 2500mm collimator, the world's largest and the most accurate ever made for motion picture lenses. The massive optical bench on which your lens is mounted is a precision instrument with controlled movement of the lens along its three axes to extremely accurate measurements. An image is projected from our collimator through your lens and is observed by a high powered research microscope. Every optical characteristic can be clearly examined far beyond the resolving power of any motion picture film. By this method we can test your lens for focus and alignment to an accuracy of less than one thousandth of an inch! At Century our standards are as high as modern technology makes possible. None of this equipment by itself could do the job. Our expert specialists with many years of cine optic experience assure superb quality of workmanship as well as competent testing. Optical bench tested means you can depend on your lens to give you the finest pictures attainable.

reference shelf

"Basic Production Techniques for Motion Pictures"

A 64-page illustrated book designed to help people involved in producing motion pictures for industry and government has been published by Eastman Kodak Company.

Included are sections on preliminary planning, writing the script, equipment and procedures for shooting, films, lighting, editing, titling, sound on film, lab services, and a glossary.

"Basic Production Techniques for Motion Pictures" is available at \$2 per copy from Kodak dealers, or from Eastman Kodak Company, Dept. 454, Rochester, N.Y. 14650.

New Animation Book

"Animation in Twelve Hard Lessons" is a new book written, published and distributed by Robert P. Heath who

has been a leading animation film producer for the past 18 years.

The 144-page 11" by 14" book has 850 illustrations, and is particularly designed for the student who wants to learn animation, not just read about it.

Compiled in lesson form (it was originally planned to be an animation correspondence course), the book includes case-tested techniques and wealth of organized art and technique data.

The book tells how to build an animation disk, light box, peg bar or where to order them. It goes on to cover in-betweening, animation, cameras, tricks of the trade, actions in technical animation. All solid useful stuff by a down-to-earth, but Academy Award winning designer, animator and cameraman.

"Animation in Twelve Hard Lessons" is available at \$14.95 from Robert P. Heath Productions, Inc. 1627 Scott Avenue, West Islip, N.Y. 11795.

Pocket Lens-Screen Calculator for Projectionists

A handy device similar to a slide rule and showing the proper length lens to be used for various film formats to obtain a proper screen size at a given projection distance is available from DaLite Screen Company.

On the opposite side of the calculator are charts for converting inches to millimeters and for computing showing times of various formats of motion picture films.

The calculators are free from Elmer J. Danch, DaLite Screen Company, Warsaw, Ind. 46580.

Book Describes 35,000 Motion Pictures

"Motion Pictures, 1960-69" lists 35,000 motion pictures registered with the U.S. Copyright Office during the '60s. Information given is title, producer, physical description and name of copyright owner. The 744-page book costs \$8 from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Rental/Sale and Free Loan Film Catalogs

New 1971-72 catalogs are now available from Association-Sterling Film. Included are many new titles on ecology, law and order, addiction, and even one on women's lib. Write Association-Sterling Films, 866 Third Avenue, New York 10022.

We are very proud to have been honored in 1972 with TWO Academy Awards for technical achievements for the design and development of our J-4 Zoom Control and the hand held Arri Crystal Motor.

This continues our recognition by the academy for technical achievement. Our first academy award was won in 1969 for developing Pellicle Reflex Viewing for the BNC.

Simple Smooth Silent

The J-4 "Joy Stick" Zoom Control

You'll find no jerks, bumps, or noise in the J-4 "Joy Stick"! The most critical professionals in Hollywood have tested, and accepted it as the standard in zoom controls. High reliability combined with easy, uncomplicated operation sets it apart and ahead of anything available.

Smooth? A true servo feedback system, provides constant speed through full zoom over a wide speed range (1 1/2 sec-4 1/2 min).

Exclusive Joy Stick control gives gradual start/stop to and from preset maximum.

Simple? Complete control under your thumb . . . You set the rate and your thumb does the rest! The fully

self-contained, compact control box, has a built-in rechargeable battery.

You get what you want, when you want it, the way you want it — simply, smoothly, silently!

Brackets and gears are available to fit all zoom lenses and all 16mm and 35mm cameras.

Ed Di Giulio Says:

Zoom controls have always been a pain-in-the-neck! It's almost impossible to design one that satisfies everybody. We know — we've gone through four complete redesigns over the past three years in perfecting the Model J-4. Its success is attested to in its use by Hollywood's professional cinematographers to the virtual exclusion of all other types.

But the real surprise is that a zoom control as sophisticated as the J-4 "Joy Stick" has been accepted by 16mm cameramen as well!

*Technology in the
service of creativity.*

20 million viewers for \$1600.

Yes, 8¢ a thousand.

Actual circulation figures from our files.

You can match them, with a "press release on film." A minute or less of 16mm-sound footage, plus printed script, that you give away to selected stations.

Important: Hire Modern to send your clips to the stations. We know the right people at the right stations. They know us, and recognize that our distinctive package contains quality material. Result: High acceptance rate. We send you a report on which stations used your film and how many people saw it.

We used to call this service Modern TV Newsfilm, but we've renamed it Modern TV Spots. Reason: We've found a much wider opportunity for you. A news angle is fine, but stations will use seasonal material, public service announcements, fillers of many types. Our experience — and surveys — show that they welcome clips on environment, business (this gets a high rating, in fact), women, youth, sports, other subjects.

What else do you need to know? Ask Modern.

The new Norelco soundslidemoviefilmstrip machine helps an expanding industry turn beginners into skilled operators without tying up experienced personnel!

The National Knitted Outerwear Association has developed a way for its member companies to meet a critical shortage of trained personnel through a remarkably effective in-plant training program that requires a minimum of instruction and guidance from skilled workers.

A series of six programs have been produced by the Association utilizing the unique multi-media talents of the Norelco PIP system. The programs enable individual and small groups of new employees to *teach themselves* how to operate intricate knitting machinery before going to the machine itself to perform a particular operation. Because of the effectiveness of the approach, additional PIP programs are being prepared to help elevate the skills of knitting personnel to even more sophisticated levels.

The PIP system combines all major audio-visual techniques in a sleek self-contained unit that's as easy to load and use as a tape recorder. With PIP, the dramatic realism of motion sequences are easily added

to ordinary slide or filmstrip presentations. Important concepts can be emphasized or clarified through animation, slowdowns and other techniques...all without creating costly or complex production problems.

What's more, PIP brings remarkable economies. For example, as a slide/filmstrip presentation, one foot of PIP super 8 film contains 72 visual frames and one foot of film can be duplicated for under 10¢ a foot. That's 72 visuals for under 10¢!

For the motion sequences, PIP saves some 80% to 90% of the film footage normally used. It doesn't have to run at a fixed rate of speed for titles or at a high rate of speed for motion. Regular sound movies take 120 film frames to show a still picture on the screen for just 5 seconds. With PIP, only 1 frame is needed...and the sound doesn't stop.

PIP can be used by individuals or small groups of trainees without the necessity of setting up a screen and projector, threading the film, etc. It's portable and the trainee can stop it, advance it one frame at a time, or fast forward and rewind it...with pushbutton simplicity.

PIP does not involve the complexities of videotape equipment such as sophisticated electronics, conflicting TV standards and high costs of production and duplication.

And PIP lends itself to all kinds of creative film techniques familiar to film makers. Animation, slowdowns, speed-ups, pop-ons, freeze-frames, frame changing to music...and lots of other ways of adding interest and clarity to film...can be done simply and economically.

Whatever your training or communication needs may be...chances are PIP can handle them more effectively *and* more economically. Get all the facts about PIP or make a date to see PIP in action. Write or call: North American Philips Corp., Norelco Training and Education Div., 35 Abbot Ave., Morristown, N.J. 07960. Dept BS3

Norelco® PIP™

When you
concentrate
on doing
something well...
and spend
24 years at it...
you're likely to
do it very well
indeed.

and we do!

No other lab in the world knows as much about processing filmstrips and color slide duplicates as Frank Holmes Laboratories.

This isn't idle bragging.

It's a fact. Ever since we started in 1948, we have specialized in turning out the finest quality color filmstrips and slides. They're not a "side line" with us. They're our only business.

Along the way, we've run into a great many problems, and solved them.

We've learned a lot about short cuts — which ones to take and which to avoid.

We've experimented with many techniques and created a few new ones ourselves.

Much of the equipment at Frank Holmes Laboratories is unique and has no counterpart elsewhere in the industry. Nowhere else is there such an exacting inspection procedure . . . or such an outstanding enthusiasm for perfection.

Which means simply this . . .

If you want the finest quality color filmstrips or color slide duplicates, why not select a specialist, like Frank Holmes Laboratories . . . the lab that does them better than anyone else in the world!

Write today for our new free catalog!

WHAT'S A NICE CAMERA LIKE ACL DOING IN A PLACE LIKE THIS?

TAKING SHARP, STEADY, SYNC ACCURATE PICTURES

In jungles, on glaciers, up hills or downtown,
the new ECLAIR ACL, 16mm. camera stands out.

It slues smoothly on tripod or from your shoulder,
changes magazines in less than 5 seconds and mounts any lens.

Powered by a pocket-size battery that recharges in 30 minutes,
it can drive 2,400 feet of film before recharging.

It's quiet, weighs under 9 lbs. and can take a beating.

Also, the price helps.

ECLAIR

Movies to write by.

You can leave the lights on and let your audience take notes, when you show films with the Bauer P6 Automatic 300. Because this superb portable 16mm sound projector features a metal-arc lamp, which is up to four times as bright as conventional projector lamps.

Or you can use the Automatic 300 in the dark, to fill even large, distant screens with light of daylight quality. The kind of light you need for a brilliant image.

No wonder this projector is recommended for auditoriums, theatres and large conference rooms.

It's available in optical and optical/magnetic playback models.

Other features: auto thread-

ing; provision to connect optional change-over unit (also recommended for remote control of projector); and Fail Safe switch that stops projector if film breaks.

Other Bauer professional 16mm projectors:

Bauer P6 Studio 16 mm double band projector. A film maker's combined film-and-sound studio.

Bauer P6 Synchron—ideal projector for film screening. Manual threading. Optical/magnetic playback and magnetic recording.

Bauer P6 Automatic M152—Self-threading A-V projector. Optical/magnetic playback and magnetic recording.

Now the best-known name in videotape is in videocassettes.

It's easy to recognize the benefits of videocassettes as an audiovisual tool. The handling ease. The added protection for your program material.

It's also easy to anticipate some possible problems. What about compatibility between different brands of cassettes and equipment? What about the quality of picture and sound?

We can help answer both questions.

First, "Scotch" Brand Videocassettes are

compatible with all $\frac{3}{4}$ " U-matic videocassette equipment available at this writing.

Second, we've provided our videocassettes with our most advanced videotape, "Scotch" High Energy. High Energy's remarkable magnetic properties were engineered specifically for recording at slower cassette speeds. It can provide you with color masters and duplicates every bit as good as reel-to-reel helical tape. Perhaps even better.

As the pioneer in videotape, 3M has long set the standards of quality. Today, we're setting those same standards in videocassettes.

For facts about today's videocassettes, write Market Services, Magnetic Products Division, 3M Center, St. Paul, Minn. 55101.

CINE Awards 125 CINE Golden Eagles

125 CINE Golden Eagle films have been selected at the spring screenings of CINE (Council on International Nontheatrical Events) to represent the United States in international film festivals for the coming year.

Dr. William G. Carr, president of the council, said that over 470 films were entered in the CINE spring competition and that he anticipates at least a similar number, or more, to be entered in the fall competition which closes August 15.

CINE Golden Eagle films are entered in approximately 100 film festivals around the world. CINE develops working relationships with those festivals which offer interesting opportunities for United States productions. On behalf of their makers, CINE enters and ships prints to these festivals.

Selecting Golden Eagle films for overseas film festivals: John Flory, President of Spacefilms; J. Edward Oglesby, Virginia State Department of Education; James G. Damon, Jr., IBM World Trade Corp.; and Dr. William G. Carr, President of the World Confederation of Organizations of the Teaching Profession.

Business and industry films (44) were the next to largest group of entrants in the spring screenings, but only 11 (25%) were awarded Golden Eagles. By contrast, out of 15 films in the Dentistry category, 14 (93%) were awarded Golden Eagles; as well as 14 out of 41 government films (34%); and 8 out of 14 sports films (57%). It appears that business and industry films, as well as those for education — 12 Golden Eagles out of 60 entries (20%) — were considerably tougher than some of the others, or else, for example, this year's crop of dentistry films was of an almost unparalleled excellence.

Chrysler/Plymouth-Dodge Dealers Switch to Super 8

Chrysler Corporation will convert its dealer product information and sales and service training films to super 8mm motion pictures with the introduction of the 1973 new cars, according to Robert B. McCurry, Jr., Vice President for U.S. Automotive Sales and Service.

By utilizing Demo-Screen, an exclusive, new self-contained motion picture screen and cartridge-fed super 8mm projector system developed by Ross Roy, Inc., the auto maker hopes to communicate information, fast and with great graphic impact.

Chrysler will start supplying its Chrysler/Plymouth and Dodge dealers with the system and the initial sales, service and product information films in September. During the 1973 model year, the company will supply each of its participating dealers with six car line films, which introduce the 1973 models to the viewers; five comparison films pitting Chrysler/Plymouth and Dodge products against their competitors; six sales training films; and twelve service training films.

Ross Roy, Inc., is the agency and will produce the films.

"Safety Film of the Year"

The National Committee on Films for Safety has named *Getting Off on the Right Foot* a 26-minute instructional film, the "Safety Film of the Year" for 1972. The Committee also named eight additional Bronze Plaque and 10 Award of Merit winners. The Bronze awards will be presented at the National Safety Congress this October.

The awards, made annually since 1942, are designed to recognize outstanding new business films on subjects covering on-the-road, in-the-home, on the job and public area safety.

Getting Off on the Right Foot, sponsored by the Union Pacific Railroad Company, and produced by Pacific Colorfilm, Inc., focusses on teaching correct, safe procedures in railroad switchyard operations. It was entered in the Occupational category of the competition. Other categories are: General, Traffic and Transportation, Recreation and Sports, Home, Television Subjects, TV Spots and Shorts.

Bronze Plaques awarded to seven other films and one TV spot were:

Hot Stuff, an animated film, the history of fire. It was sponsored by the Dominion Fire Commissioner, Department of Public Works, Canada and produced by the National Film Board of Canada.

Winter Walking, produced for U.S. Postal Service by MPO Productions, Inc. demonstrates techniques to avoid mishaps and injuries while walking.

Defensive Driving I, sponsored by Motorola Systems, Inc., and produced by Woroner Films, tells how a policeman's lack of self-discipline can result in a tragic accident. It also covers many other areas of safe practices for policemen.

Help Is, sponsored by the Emergency Health Service, Department of National Health and Welfare, Canada and produced by Chetwynd Films emphasizes life-saving first aid procedures in road accidents.

Otto the Auto, sponsored by the AAA Foundation for Traffic Safety and produced by Design Center, Inc. is a cartoon-style film aimed at teaching children why drivers may not see them, and the hazards of playing around cars. The film also explains use of pedestrian-operated buttons and traffic control lights.

The Trouble with Ice, produced by the National Council, Boy Scouts of America, shows the various rescue techniques to use when a person falls through ice.

In a Fire—Second Count, produced by Film Communicators, dramatizes the importance of planning home escape routes.

Sure, Mac, Sure, a series of 60-second TV spots sponsored by the AAA Foundation for Traffic Safety and produced by Starbecker, Inc., the subject of drinking and driving.

CINE Elects Officers for 1972-73

Dr. William G. Carr has been reelected to an unprecedented third term as President of CINE (Council on International Nontheatrical Events, Inc.) at the Fifteenth Annual Board of Directors Meeting in Washington, D.C.

Dr. Carr is also President of World Confederation of Organization of the Teaching Profession and, prior to retirement, he was Executive Secretary of the National Education Association from 1954 to 1969.

We are very proud to have been honored in 1972 with TWO Academy Awards for technical achievements for the design and development of our J-4 Zoom Control and the hand held Arri Crystal Motor. This continues our recognition by the academy for technical achievement. Our first academy award was won in 1969 for developing Pellicle Reflex Viewing for the BNC.

Simple Smooth Silent

The J-4 "Joy Stick" Zoom Control

You'll find no jerks, bumps, or noise in the J-4 "Joy Stick"! The most critical professionals in Hollywood have tested, and accepted it as the standard in zoom controls. High reliability combined with easy, uncomplicated operation sets it apart and ahead of anything available.

Smooth? A true servo feedback system, provides constant speed through full zoom over a wide speed range (1½ sec-4½ min).

Exclusive Joy Stick control gives gradual start/stop to and from preset maximum.

Simple? Complete control under your thumb . . . You set the rate and your thumb does the rest! The fully self-contained, compact control box, has a built-in rechargeable battery. You get what you want, when you want it, the way you want it — simply, smoothly, silently!

Brackets and gears are available to fit all zoom lenses and all 16mm and 35mm cameras.

Ed Di Giulio Says:

Zoom controls have always been a pain-in-the-neck! It's almost impossible to design one that satisfies everybody. We know — we've gone through four complete redesigns over the past three years in perfecting the Model J-4. Its success is attested to in its use by Hollywood's professional cinematographers to the virtual exclusion of all other types.

But the real surprise is that a zoom control as sophisticated as the J-4 "Joy Stick" has been accepted by 16mm cameramen as well!

Technology in the
service of creativity.

IAVA Meeting Report

MANAGERS of corporate audio visual programs of leading American companies assembled May 8-11 under the verdant canopy of Tan-Tar-A beside the Lake of the Ozarks in Missouri for the 26th annual spring meeting of their Industrial Audio-Visual Association. They elected Harold N. Read, Director, Audio Visual Activities, Liberty Mutual Insurance Companies as the organization's president for the year ahead. Hal Read succeeds outgoing president Gerard K. Hall, Director, Audio-Visual Services, National Cash Register Co. in that post.

Ceremonies and pleasantries of Spring in the Ozarks aside, IAVA program chairman Bob McCaslin (General Supervisor, Communications Services at Caterpillar Tractor Co.) was ready with a sharply-focused program covering the principal concerns of this hard-working group. Some 60 managers, their wives and guests helped make the three-day session one of the organization's most interesting and useful of its kind.

Training got the opening day spotlight as facilities expert Hubert Wilke, Hubert Wilke, Inc., presented "Software . . . Stairway to the Executive Suite" with stress on how a-v men use the tools at their command. Bob Richards, Supervisor of Caterpillar's Sales Training Division, then discussed the common problems (and the possible answers) of both media specialists and the trainer.

"Too much pressure applied by management to get things done but too few skilled people to do the job.

"The cost of doing the job right v.s. a limited budget to get it done . . .

"Accountability for training results but not the authority to attain those results . . . etc."

John Bakke, Caterpillar training materials executive, moved the program into worldwide service training needs as he discussed that company's basic work in "Fundamental English" needed to get service training understood in key overseas market areas. The company has developed its own vocabulary to simplify words which must be understood service data.

Paul H. Chaddock, Manager, Ed-

ucation Systems, Addressograph-Multigraph Corporation, rounded out this productive session on Training and Training Media with "Training the Trainer" as his theme. The afternoon program on opening day wound up with a revealing talk on "Direct Charge-Back for Audio-Visual Services" taken from the experience of Ron Christopher, head of A-V at Smith, Kline & French.

How do you measure the innumerable contributions made over 43 years of experience in audiovisuals for America's largest corporation: American Telephone & Telegraph Co? That company's retiring head of Film & CCTV, Willis H. Pratt, Jr. gave IAVA's second day program a depth of both emotion and practical guidance seldom heard as told of some of the "basics" which have guided him since he joined the Southern New England Telephone Co. in 1929. Listen and learn . . . to the wisdom of those years!

"Always make your contact within operations a pleasant experience . . . and "be sensitive to the feelings of others . . . He cautioned: make your media "simple and beautiful and squeaky clear" but "when in Rome, use the native tongue" and "say the thing you have to say in the way the listener finds meaningful."

To audio visual managers, Bill Pratt advised: "be as offensive as possible in putting your case to management; don't defend yourself: attack. Tell them what they want to hear. If it concerns costs, give them costs, soonest! They cannot follow until you lead."

For all of those years in the service of audiovisuals and for his wide-ranging "good citizenship" on behalf of A-V in the ANA, CINE, etc., Bill Pratt received the IAVA "Outstanding Member" Plaque to a standing ovation at Tan-Tar-A.

Recognition that American business is dependent on world trade again came into focus as Don Benjamin, Audio Visual Manager at Merck, Sharp & Dohme described his experiences in "Audio-Visual Production Overseas" where he coordinated and helped produce an authoritative film on *Hyper-Tension* involving medical authorities on that subject in sev-

en countries. He credited Holland's skillful Carillon Films NV and the crews with the success of his 22-day mission abroad.

That trek included a visit to the Soviet Union where Benjamin was warmly received. On a visit to a film festival at Kiev he noted that in U.S. films: Western Electric Company's *Micro* and IBM's *Micro-Seconds* were enthusiastically applauded by Soviet viewers. Russian audiences he noted, react emotionally and you know immediately what they like . . . and don't like.

Dr. Ron Brown, partner in the management consulting firm of Farley Brown, Inc., Minneapolis, talked of "Trust: Key to Communications" with verve and inspiration as the speaker at IAVA's annual dinner.

New officers-elect, in addition to Hal Read, include: John Tierne, Standard Oil Co. N.J., first vice-president; Fred Barker, Del Monte Corporation, secretary and Bob McCaslin, Caterpillar, as vice-president, Illinois Directors of IAVA for 1972-73 are:

Allan Murdock, Central Region; William Dikeman, Eastern Region; Wayne Peterson, Northern Region; Eugart Yerian, Southern Region; and Edward Carroll, Western Region.

Nine new members, with wide-ranging responsibilities in a v management, joined IAVA at Tan-Tar-A: Arthur C. Jack, Jr., Supervisor, Broadcast Media at Alcoa; Gerald J. Kru, A-V Manager, Gerber Products Co.; William B. Nelson, Asst. Director, Sales Promotion, Provident Life & Accident Insurance Co.; Richard F. C. Meara, Information Manager-CCTV, AT&T; Daniel Pangrace, A-V Specialist, Glidden-Durkee Division, SC; John Pennington, Manager, Graph Communications, Genesco; S. Richard Peters, Supervisor, Audio-Visual Services, Armco Steel Corporation; and Marvin W. Winchester, Director, A Services, State Farm Insurance Co.

The Fall Meeting is scheduled for late October at Orlando, Florida with Cal Gould as program chairman; the 1973 Spring Meeting will be held in Houston, Texas. Gerry H. Johns heads program arrangements there.

There was a producer from Himerick,
 Who said as he began his limerick,
 "I wouldn't be sanker
 If I'd bought gear from Duncan;"
 And that's the idea of this gimmerick.

Forgive our poetic license (it expired), but that's really the advantage of buying motion picture equipment from Victor Duncan, Inc. . . . it works. In addition to our competitive prices, you get the assurance that your equipment has been checked for proper function and operation by people who know what they are doing.

We're serious about the motion picture business . . . we don't do anything else—no still cameras, no flash bulbs, no slide projectors. We think it makes sense to be able to excel in a category in which we're experts. If you've bought gear from us in the past, we're sure you've discovered that we can't possibly confuse ECO with Kodabromide because we deal only with motion picture items. If you haven't bought equipment from us before, get serious! Forget the general practitioners. Talk to the specialists at Victor Duncan, Inc.

Training Films for the '70's

What kinds of training films are going to be needed to prepare millions of our young Americans for technical careers? Clues are coming from the National Society of Professional Engineers and from the U.S. Office of Education. The USOE predicts, for example, that by 1975 more than one million new and interesting technical jobs promising good salaries will open up.

Obviously the list begins with our need for computer and other electronic technicians, mechanical technicians

and draftsmen. But there are opportunities ahead for films and jobs in these areas:

Appliance service technicians; automotive technicians; chemical technicians; electromechanical technicians; fire protection technicians; health service technicians; instrumentation technicians; library technicians; metallurgical and radiological technicians and technologists; sanitation and environmental technicians; and wildlife, conservation workers.

The training film prospect can be analysed by knowing what these organizations are doing and thinking: get data from the National Association

of Trade & Technical Schools, 1618 18th St., N.W., Washington, D.C. 20009; the Engineering Council on Professional Development Guidance, 345 E. 47th St., New York, N.Y. 10017; the U.S. Office of Education and the new Occupational Outlook Handbook, published by the U.S. Dept. of Labor, both out of Washington, D.C.

Help the Film Buyer Beware

Out in St. Louis last month, a \$30,000 Human Development Corporation film contract nearly went to a relatively inexperienced new film company headed by the Mayor's son. Although the company was the *third* lowest bidder for the 20-minute subject, it had the contract until the U.S. Department of Labor killed the buyout entirely after adverse publicity.

Among the bidders were long-established regional producers. When they armed with the kind of *national bid standards* we've long implor commercial film makers to adopt. Key answers like: *depth of experience*, fortified by submission of recent film *evidence of financial stability*; of *permanent staff and facilities*, etc. should be printed and adopted by producers *able to meet such qualifications*.

Otherwise, other St. Louis situations keep coming along: professionals suffer, the customer loses, and the medium is diminished.

Let's hear from studios who are armed with such data and from the associations responsible for preparing the kind of document acceptable to business, government and other film buyers. It should be published in the pages at least once a year and printed in quantity.

WRITE, WIRE, PHONE FOR PRICE LIST

NOW THERE'S A PROFESSIONAL 16MM ELECTRIC AT THE PRICE OF A BOLEX.

...ause it is a Bolex.

The new Bolex EBM Electric 16. With all the solid, dependable features you associate with Bolex. Plus built-in motor, and a largeable 12-volt battery contained in the most comfortable grip you ever held in your hand. A compact, easy-to-handle, thoroughly professional 16mm camera. At a price that should put an end to rentals forever. \$1200 and it's yours to own.

The motor is electronically controlled for accurate, steady running at speeds of 10, 16, 20, 24 and 25 frames per second, and 24 and 25 for synch sound. An easily attachable film magazine is also available.

The EBM has flickerless ground glass re-viewing and focusing with 14X magnification. Plus a handy behind the lens filter

slot arrangement. And the camera incorporates the famous Bolex registration claw that assures rock-steady images.

Equipped with the Vario-Switar 16-100mm zoom lens with electric-eye through-the-lens light metering and power zoom, the EBM becomes the most automated professional camera. (NASA chose Switar lenses for use in the Apollo flights.) A dozen other top quality fixed focus and zoom lenses are available, all incorporating the bayonet type lens mount for instant lens changing and locked ring security.

Accessories for the EBM include a small, lightweight synch pulse generator that rides in a pocket. And a pocket-sized crystal control unit for wireless synch sound filming.

The Bolex EBM has everything a professional could wish for in an electric 16. At a price that sounds like wishful thinking.

REVIEWS AND PREVIEWS OF NEW VISUALS

What'll We Do Without Money

A look into what life will be like in the cashless, checkless society which economists predict will be with us in the next generation is provided in a new film called *Impulse '90* now available through the film libraries of Modern Talking Picture Service.

Impulse '90 depicts the world of tomorrow where all buying, spending and borrowing will be through a Universal Credit Card. Computers will instantly record every transaction. There will be no paychecks and no monthly bills. Money will be only an electronic impulse. Viewers will see how the spending impulse and electronic impulse meet head on in the world of the Universal Credit Card. Scenes focus on some of the key problems and warning signals in future money management.

Impulse '90 was produced for Cuna Mutual Insurance Society by Cine-Mark Inc.

Love and Sukiyaki Make Out with Teflon

The Menu Planner a humorous short subject about a sophisticated young bachelor and his attractive lady friends—each chosen for her particular culinary skill—is being released to theatres by Du Pont through Association-Sterling Films.

The recipes featured in the film—sukiyaki, fondue and paella—are prepared on "Teflon" non-stick cookware to demonstrate ease of preparation, how food can be prepared and served right at the table, and how simple it is to clean up afterwards.

Jimmy and Heidi find love over a Teflon fondue pot

Along with the film, cooperating theatre managers will offer a free cookbooklet featuring the recipes shown in the film. All the theatre patron needs to do is write to Du Pont for the free

cookbooklet. Theatres will be supplied with a counter card with details of the offer.

"In a sense, we're reviving the theatre give-away," J. David Lee, Teflon Division Marketing Manager said at a recent New York premiere. "Years ago theatres gave away sets of dishes. We're offering cookbooklets."

The Menu Planner was produced for Du Pont by Peckham Productions. John Clancy, master chef and cooking teacher, supervised preparation of the foods in his kitchen at Shoreham, New York, where the film was shot.

Working Women Looking for More Meaningful Roles

51% is a new film about working women. It's not a discussion of whether women should work. Women *do* work. The film's purpose is to illustrate that if and when they work, such women should be given equitable treatment.

Is Sally just a secretary? Or should management think of a more meaningful role for her?

The film attempts to create a positive climate for women in business. It seeks to stimulate managers to provide opportunities for those women who desire more productive and meaningful corporate roles.

Equality per se is not the issue. *51%* shows that women are different—physiologically, psychologically and sociologically, but they are also different from one another. And, as such, should be treated as individuals each with a chance to prove herself.

51% asks that management first understand the changing role of women in the company; second, that it evaluate its *own* attitudes about working women. Managers are shown that they have the power to help or impede progress; they are shown what

they can do to correct existing inequalities, to insure that *all* corporate personnel are used to their fullest potential.

51% comes with a Discussion Guide line. It is produced and distributed by Robert Drucker & Company, 101 Riverside Drive, North Hollywood, CA 91602.

Let's Pass as Friends

High school students are very concerned these days about being prepared for the task of driving. *Let's Pass as Friends*, a new 14½-minute color film, the students discuss with a veteran driver-educator the urgent need for beginning drivers to get behind-the-wheel experiences in hands-on emergencies. A good place to get experience is on a driving range which can be any large paved area. Liberty Mutual Insurance Company sponsors this excellent public service film which was produced by DFI Communications, Inc., and is available for television use by Modern TV.

The Challenge of Santa Barbara

Humble Oil & Refining Company has taken the challenge of offshore production right to the people. Its film on the subject was made in Santa Barbara, California, scene of a highly publicized oil spill, and the industry's severest critics were offered a chance to speak. The townspeople themselves express the pros and cons in a series of on-screen interviews. The film graphically illustrates the seriousness of spills. And it explains—with the help of animation—the technology of drilling and production and the protective systems and procedures.

A special premiere of the film was held in Santa Barbara, too. Everyone who was in the film or had even been asked to appear in it was invited to the showing at the Biltmore Hotel. A cross-section of the citizenry was present.

The film was introduced by Dudley, manager of public relations for Humble, and after the showing and others answered questions from the audience.

Observers indicated that it was obvious that the predominant reaction of the audience was that the film was a fair presentation. This judgment

Audiscan lets your salesman concentrate on the customer, not the projector.

He never has to fuss with films, slides, tapes or records. Because everything is sealed inside the Audiscan Synchro-Lock cartridge.

All your salesman has to do is plug in the cord, turn on the power, snap in the cartridge and press the hold switch.

Then he can concentrate on the customer, because the cartridge automatically programs a full-color slide strip with synchronized sound. It automatically stops the projector when the program is finished, too.

If something comes up during the presentation, your

man just pushes the hold switch and the program stops. Then he pushes it again to continue where it left off, still synchronized.

Your customer always sees and hears exactly what you want him to. So he gets all the important details to help your salesman close the sale.

Audiscan projectors are rugged and reliable. They're built to keep right on operating through years of travel abuse.

Fill in and mail the coupon for full details on Audiscan. And help your customers concentrate on the dotted line.

A versatile Audiscan projector to choose from, starting at \$225. Plus a variety of accessories.

Audiscan The Happy Medium

PARADOX: most medical films need surgery.

If it weren't for medical films, I probably wouldn't be a free lance writer in New York today. When I was trying to make the transition from Detroit to New York, I spent six months pounding the pavements from one producer to another, showing my scripts, screening my films, and projecting my personality in a terribly depressing and apparently hopeless quest for script assignments. Finally, just as I was reaching the end of both my money and my courage, I received a call from Warren Sturgis, offering me a modest but challenging medical film assignment. That assignment was followed by others, and ever since that time not a year has passed without at least one medical script assignment, and sometimes as many as half a dozen each year. In fact, Warren still assigns me an occasional script after all these years.

There is such a shortage of competent and qualified medical script film writers that I turn away more assignments than I accept. I intentionally limit the number of medical films I do each year, in order to retain a better balance of films on many different subjects.

I have started this column with this little heart-rendering story so you will understand that I am trying very hard not to bite the hand that feeds me when I write the unkind things I must write about medical films in this issue of "Paradox".

Generally speaking, of all the categories of sponsored films that comprise the industry, medical films are

the worst motion pictures produced. I refer to the generic grouping of films, and obviously not to individual pictures, some of which are among the very best in the industry. These are not just my personal opinions. These are facts known and recognized by all filmmakers, judges at film festivals, producers, technicians, sponsors, and just about everyone else in the film industry except the people who sponsor medical films, to whom these facts are never acknowledged.

Now, since these are also my personal convictions or they would obviously not appear in this column, I'd like to say exactly what I think is wrong with most medical films, and then give three reasons why they are often so bad.

In the first place, they're usually too long. They need the surgery of the ruthless film editor. One reason medical films are too long is that they have not made the normal transition from amateur films to professional films, from home movies to mature movies, from ego-gratifying vanity films to true audio-visual learning experiences.

How ironic it is that the films made for the most stringently professional occupation should generally look so amateurish in concept, so inadequate in production, and so lacking in creativity.

The vast majority of *good* medical films are those that are constructed around a single surgical procedure. There are hundreds of these made each year, and they are fine for what they do . . . explain a surgical procedure and demonstrate it. Obviously, this is the ideal use for audio-visual technique. Only a limited number of medical personnel can actually observe a procedure when it is being done in real time. But through a surgical procedure film, any number of practitioners can observe it . . . closer and more clearly than anyone not actually assisting at the table. That's another play on words when I say that most medical films need surgery.

But there are far too many other medical films that degenerate into dull lecture films in which the "star" physician delivers his favorite lecture of the year, which he has been giving to his second year medical students the

first day of each semester for the twenty years. I've seen an awful lot of personal self-aggrandizement occasionally justified in the name of professionalism.

I think the first important reason which underlies most of the things wrong with medical films is the structure of medicine in the country. This is a pyramidal monolithic structure with the specialist at the top, followed by the general practitioner, the house staff, the medical students, the nurses, paraprofessionals, and finally at the bottom of the heap the men and patients. Medical films must conform to this structure, which means that they are the most interesting to the smallest number of people and the least interesting to the largest group.

I think the second reason that is so bad is that they are considered by physicians to be an extension of medical journals. Needless to say, medical films march to a different drummer. Although they deal with the same topics, medical films are as different from medical journals as the daily newspaper is different from the Encyclopedia Britannica, even though those two publications may also deal with many of the same topics.

There are several bright vistas on the horizon however. During the last five years, the medical film field has been slowly, *ever* so slowly, exhibiting new techniques, new sophistication, a sort of new impatience with the old forms. Within the last three years I have been asked several times whether we couldn't try something "a little different" at the planning session for medical films. Although the suggestions are always eventually turned down when we actually start to invest slightly, it is encouraging that at least people in the field are beginning to probe the various possibilities of freshness and of change.

And the third reason I would say is simply bad writing. I'm a member of a professional medical writers' association, and recently there was an article in our parochial little journal which purported to give our members additional techniques for writing clearly. It was so obtuse that I had to read it three times before I finally figured

Stanford Sobel, who writes the "Paradox" column in each issue of this magazine, is a member of the American Medical Writers Association, or at least he was before his appearance in this column.

the writer was really making a plea for simplicity in writing style. Like medical films, it too needed sur-

tital defects, when a producer man-
s to triumph over them, the re-
is usually a superb production.
had the good fortune to have
ked on some of them, and I've
rmously admired the work of other
professionals in the field. When given
creative freedom to do so, George
ney has produced some remarkable
ical films. I saw a great picture on
es that Ben Magnes produced re-
sly. And every year, Sid Milstein
sistently turns out one superior
ical film after another.

Since you've been faithful enough
sellers to come with me this far, you
receive your reward. I will reveal
ou the secret of how to sponsor
ed medical films for professional
iences. Like many formulas for
ness, it is essentially simple.

Give the producer the assignment.
n then let him alone to do the job
st! Don't bind him with your own
ictions, and don't superimpose
own conceptions to curb his cre-
ity.

In this respect at least, medical films
no different from other films after

AUDIENCE-RATED

AUDIO/VISUAL EQUIPMENT

... the right answer to your
communication problems!

Sound-filmstrips offer greater retention than movies and cost much less to produce. Program revision—improving—updating and replacement are economically practical.

What is your communication problem? Is it a sales story, assembly instruction, employee indoctrination, employee training, worker guidance, public image, public information, or the new dimension in education? Look to a good, practical sound-filmstrip to do the job most effectively at lowest cost.

However, just having pictures and sound is not enough . . . there must be a dramatic, convincing presentation . . . and that presentation needs proper "audience-rated" dependable equipment.

LaBelle offers a reputable line of reliable, rugged audio/visual equipment.

- **35MM FILMSTRIP**
with interchangeable
programs.

LA BELLE COURIER® 1
Completely portable —
rechargeable battery —
instant play and replay.

LA BELLE SENTINEL 35
TV-like, self-contained
for small groups or
carrels.

- **SIGHT/SOUND SYNC**
Adds sound and acti-
vates visuals for remote
control filmstrip or slide
projectors.

LA BELLE PLA-MATIC 83
Compact — ideal for
built-in applications.
Continuous loop tape
sound with inaudible ac-
tivating signals.

- **16MM FILMSTRIP**
Featuring 3-WAY COMMPAK Cartridge:
interchangeable in "16" Series.

LA BELLE COMMPAK
3-WAY* Sound-Filmstrip
CARTRIDGE

Continuous loop visuals and audio tape in a perma-
nently synchronized SINGLE cartridge. No threading,
no setup, no rewind, no turnover . . . slip in the
cartridge—ready to show—ready for replay.

New programs can be delivered in COMMPAK
cartridges. Existing filmstrip or slide/sound pro-
grams can be adapted. Cartridges easily carried,
easily shipped. Label, catalog, and store like books.

BY HUBERT WILKE

Providing for Electronic Signal Distribution

by Robert J. Nissen

Today, the planning of a communications facilities for new corporate headquarter buildings requires far more than just equipment considerations. In addition to the basics of space planning, rear versus front projection, good viewing, etc., one must be concerned with built-in provisions that will accommodate not only the usual intercom, paging, public address, background music and security/surveillance systems but also the more complex electronic distribution of computerized information via cathode ray tube (CRT) displays, facsimile, picture phones, information retrieval and all forms of television including the rapidly growing field of cablevision. In the new Sears Tower in Chicago we have designed a quarter mile high shaft throughout the 109 floors of what will be the world's tallest building. The Sears shaft will be able to accommodate more than 1000 coaxial signal and general communication cables. While a number of these systems may not be installed initially, their use in the future will be precluded if provisions are not made in the base building design for shafts, for horizontal distribution and for the distribution of signals that are to be sent throughout a building or to remote buildings. This month we call upon our senior associate in charge of Telecommunications—Robert Nissen—who reviews the various approaches specifically being taken for electronic distribution in large, high-rise buildings. The basic considerations he covers, however, apply to buildings of all sizes and shapes.

Fundamental to an efficient and expandable communications network is an adequate vertical communication shaft running the full height of the building. Communications closets on each floor provide, first of all, space for terminal equipment as required by the various systems, and secondly, the means by which the vertical cable runs enter the horizontal distribution network.

For efficiency of space utilization, all electronic systems should use this communications shaft for vertical cable distribution. If proper attention is paid to electrical isolation between the different services, and to adequate space allocation in the closets for terminal equipment, there should be few objections to a "shared-facility" approach. While telephone companies have been reluctant in the past to accept shared facilities, it would appear that this reserve is changing. These companies' prime concern—security of equipment and cables—often can be handled by using locked terminal equipment in the closets.

The size of the vertical communications shaft is determined by several factors: Is the building occupied by one, a few, or many tenants? What is the present and projected use of computer and CRT facilities? Will the telephone company use shared facilities? What is the ratio of private to non-private closed-circuit television use? Typical shaft sizes for large buildings are shown in Figure 7 (these particular shafts do not include telephone company cables).

The optimum location for the communications shaft is in the center of the core, but sufficiently separated from electrical power distribution. careful consideration must be given to the means of access to the horizontal distribution system from the closets.

The shaft should run straight up through the building. Horizontal off-

sets or jogs become particularly troublesome as the number of cables increases. The number of cables communications shaft can, for instance, may exceed one thousand large building.

Basic design for electronic distribution in large building. Distribution center preferably in center of building feeds, through center shaft and distribution for horizontal distribution on each floor.

Adequate cable-supporting device must be provided in the vertical shaft. Requirements for this support are more stringent for communications cables than for power cables. The problem is a serious one for two reasons. First, communication cables are delicate, physically. For example, the inner insulation of coaxial cables is cold-flow when the cables are tightly strapped, or put under continuous longitudinal stress. This cold flow can modify the electrical characteristics

Hubert Wilke is president of Hubert Wilke Inc., an international organization specializing in communications facilities design and programming consultation.

cable, making it unfit for use. For this reason, special cable-supporting devices should be installed on at least every floor level.

Secondly, the various types of signal systems carried in the common shaft must be physically isolated and electrically shielded from each other to maintain signal integrity between systems. Otherwise, signal contamination or cross-talk may occur. Results: computers may mis-register; privacy may be violated with audio systems; television signals may interfere with one another.

Conduits or raceways in the vertical shaft can provide protection from signal contamination, but they do not provide adequate vertical cable support. Continuous steel cable ladders, on the other hand, provide not only a high degree of electrical isolation between the various cable groups, but also afford excellent physical support for the cables.

Requirements for horizontal distribution: Electrical isolation, and easy access

There are two possible locations for horizontal distribution: in underfloor duct or above the hung ceiling. Because of the sensitivity of the electronic signals, it is not advisable to run the wiring for these signals in the same spaces of underfloor-duct cells that carry power and telephone wiring. If separate cells are provided for electronic distribution, enough runs must be provided to allow sufficient flexibility in location of outlet boxes in a room. It is quite common to have four or five different types of signals terminating in one location in a room. As a consequence, the use of underfloor duct tends to restrict location of outlets.

Horizontal distribution of electronic signals via space above hung ceilings permits virtually unrestricted flexibility in location of outlet connections. Further, this method permits signal integrity, either by physical separation of the various cable groups or by running them openly, or better, by separate conduit or wireway systems for each of the groups.

The conduit method provides for dedicated signal integrity that cannot be degraded by inadequate workmanship. And conduit may be required, in any case, as code authorities become more concerned about the fuel efficiency of cable insulation. All wiring, including low-voltage signal circuits, will be required by many code jurisdictions to be in conduit, raceways or duct cells.

A combination of underfloor duct for power and telephone and above-ceiling conduit for electronic systems provides the ultimate in flexibility and signal integrity for all systems.

Distribution centers for communications should be located centrally

With electronic communications, there will be one or more distribution centers for originating and distributing signals to various locations within a building, or to remote buildings.

In the case of television systems, this center may include television studios, video-tape and film equipment, and a switching center for the closed-circuit television system. In the case of computer systems, the center may include the main computer facilities plus ancillary equipment for tie-in services.

In order to keep the size of the vertical shaft as small as possible, the distribution center should be located—all other considerations aside—on a floor that is vertically in the center of the floors having communications facilities. This way, the number of cables up and down will be more nearly equalized. A distribution center at the top or the bottom of a building may result in there being nearly twice as many cables in the shaft as there

would be if it had been located in the center of the building.

SUMMARY

Demands for the distribution of electronic signals within buildings are escalating at a rapid rate. All indications are that future communication technology will require greatly increased building space for cable distribution. The nature of electronic distribution systems requires unique approaches for cable routing, support, and isolation.

Base building design should reflect careful consideration of electronic distribution requirements so as not to restrict, for the present or the future, the use of modern communication systems. □

Robert J. Nissen is a senior associate of Hubert Wilke, Inc., and a leading authority on television systems engineering.

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it. Why settle for less than the best? Call Reela now.

REELA OFFERS:

Complete editorial services • complete producer's services — animation — titling — sound • complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming • Super 8 printing and cartridgeing.

a-v man

Harold N. Read, Audio-Visual Director of Liberty Mutual Insurance Company, is Business Screen's A-V Man in this continuing series of profiles of leaders in the industrial audio-visual world.

You might visualize Harold Read's life path as two intransigent lines which ultimately meet and then separate. In essence, he has pursued two distinctly separate careers, one civilian and one military. In one, he is Audio Visual Director of Liberty Mutual Insurance Company; in the other, he is a Brigadier General in the U.S. National Guard.

Although getting into the audio-visual business turned out to be almost pure chance for Read, he now thinks he had been unconsciously in training for it for years. His first job as a 16-year-old brought him into close daily contact with the motion picture medium, as an usher in a first-run theatre in his home town of Pawtucket, Rhode Island. He remembers learning a lot about motion pictures just looking and listening: looking primarily at the audiences' reactions (because the ushers weren't allowed to look at the screen while they worked) and listening to the sound track.

"Of course, we were allowed to watch the films," Read says, "but only on our own time. I spent many hours watching films and studying film production techniques. It kindled in me a real interest in films which I continued to pursue over the years as a hobby, and then finally in the military as a vocation."

After starting college in the fall of 1941, Read found that his civilian career would have to be short lived. Uncle Sam was calling. Harold was lucky, however, in that instead of giving him a rifle, the Army issued pencils and books and shipped him off

to college in Oklahoma. When the Army college program (ASTP) terminated, they took away the books and, typically, made him a communications specialist because of his background in "motion pictures." Not the producer-director type, this time but the radio-telephone kind. So, he ended up as a telephone wire chief in the European theatre. Then one day he was notified that he had been tapped for a commission. Although the Germans at that time were shooting infantry second lieutenants faster than the army could make them, Harold managed to survive, and after the shooting was over he remained in Germany with the Counter Intelligence Corps gathering evidence to be used by the Allied prosecution staff in the War Crime Trials at Nuremberg.

Read left the Army in March, 1946, and after a short spell as credit manager for a Providence department store, he started his long career with Liberty Mutual Insurance Company, first as a claims adjuster.

With a new bride to support, Hal found that he needed some extra money to fill up those newlywed gaps, so he joined the National Guard, donning again the uniform he had been out of for only a few months.

During the next four years, things went pretty much on an even keel: claims adjusting, night school at the University of Rhode Island, raising a family, and service in the National Guard. Suddenly the bubble burst. President Truman decided North Korea was not about to occupy South Korea without a fight, and Read found himself back on active duty.

The next two years of his life set the stage for his future audio-visual career. As an operations and training officer with the 43rd Infantry Division, he began to develop a deep interest in audio-visual media. Having dabbled in motion pictures and photography since his theatre experiences, he now took up the media in earnest. During this period, he worked extensively with the Department of the Army developing aids for military training, and after his tour of duty, he continued to work actively in this field with National Guard units.

The converging lines bisect.

Following Korea, Read returned to work with Liberty Mutual. As a claims supervisor, he began to develop his own audio-visual aids for training adjusters. These were highly regarded by the Home Office in Boston, and won him an assignment to the Claims staff preparing training materials for the entire Claims Department.

"The going was made a lot easier by some real helpful people," Hal

Read says. "One person to whom I will always be grateful is Ed Palm of the New England Telephone Telegraph Company. Ed, somehow, got wind of the fact that Liberty was starting a new AV department and got in touch with me. He practically took me under his wing. I telephoned him frequently and he was always right there with the information and guidance needed. Through him I joined the Industrial Audio-Visual Association and through IAVA I gained the knowledge of the audio-visual business which I was later to build my own department."

The converging lines bisect and then separate.

For almost two years Read was producing audio-visual materials for Liberty Mutual and the National Guard. Then, he was resigned by the Guard to a command slot, and has been there ever since. In fact, he hasn't produced a visual aid for the army in nine years. His military assignments have included that of artillery battalion commander, Assistant Corps Artillery Commander, Group Artillery Commander, and during the past three months he has been assigned to the 43rd Brigade as Brigadier General in command.

In the fall of 1963, Read took a sabbatical from his audio-visual duties at Liberty to attend the Army Command and General Staff College, graduating in June of 1963.

By fall of 1964 he was back at Liberty busily producing filmstrips, slides, and a first motion picture. In December of 1965 the company decided to establish a single audio-visual facility to service all departments, and Read landed the job of managing this activity.

Today, some seven years later, Read's department has 22 people engaged in audio-visual production at Liberty Mutual. Approximately 1,000 orders a year covering a range of audio-visual materials are produced in-house, and the department has the capability of producing video tapes and a rather sophisticated television studio.

Liberty Mutual motion pictures are being shown countrywide to live audiences and on television. Filmstrips are used extensively throughout Company training programs, and by some of the larger accounts. Slide and overhead transparency production runs in the area of some 4000 to 5000 a month. Brochures, posters and audio tapes are also produced.

Aside from his dual life as a successful businessman and U.S. General Officer, Read has enjoyed an active life in his other interests. He has been active in Boy Scout work, and has

worked hard for his church. In the last six years he has raised close to a million dollars to build the church, and to rebuild it after it burned to the ground. He has served as vestryman, senior warden, as a delegate to the General Convention of the Episcopal Church in the United States, and as a member of the Episcopal House of Bishops. He is also now in the process of producing a film for the Diocese of Rhode Island.

Throughout Harold Read's life is a strong undercurrent of devotion to his wife, Winifred, and his family. His father, a Sergeant E-5, U.S. Army, is a former Viet Nam combat photographer, and is presently assigned as a combat photographer to the Commanding General, 6th U.S. Army. The Reads have two daughters, the older a school teacher and the younger a member of the Women's Air Force on assignment in England.

In his position as 1972-73 President of the IAVA, Harold Read was recently asked what he thought about the future of the audio-visual man today, and what he could see for the profession in the future.

"The audio-visual man is now riding the crest of the information explosion," Read said. "He is enjoying a role in industrial communications that his predecessor worked so hard to attain.

The unprecedented new resources of knowledge coupled with electronic ingenuity has seemed to catapult the AV man to a new importance in industry.

"The fact is, things haven't really been better. AV men are earning top wages and getting recognized for what they can contribute. But, the future is not certain. It could be that our present importance may be short lived. I am apprehensive, because I am not sure the AV man has found a positive place to function in the corporate structure.

"Here at Liberty Mutual, I take my guidance from the manager of Personnel Development. My primary interest is training, although I do an equal amount of work for sales, marketing, public relations, and advertising. I find, however, that my fellow audio visual associates have different affiliations in their companies. Some are primarily associated in sales, other marketing, public relations or advertising, yet all seem to get a smattering of the other disciplines.

"This all points, I think, to future problems for the audio visual man. In his present indefinable role in industry he stands little hope of ever rising above the level of middle management in his AV job. If he ever expects to enjoy a partnership in the decision-making process allocated to top

management he must first find a place in industry that will give him a more positive identification similar to the position now enjoyed by sales managers, comptrollers, advertising men, etc.

"Solution? I am sure there are many. I do not think the academic world is aware of the contributions AV people are making in industry. At least, it seems to ignore them. I don't know of any school that offers an industrial AV course. Within the AV circle we have not set up any standards of performance or of knowledge to establish a true profession.

"There will always be a place for audio visuals in industry. I'm concerned not with its place, but its importance. Industry, to a degree, has remained aloof to the AV dilemma, preferring instead to rely on sadly outdated time proven methods to tell its story. But it must eventually adopt modern AV methods even more strongly if it is to compete successfully for men's minds in the age of the information explosion. When this happens the audio visual man, if he has established his role in the corporate structure, will have his day to contribute as significantly to his company's success as surely as the engineer, the salesman, and the financier have." □

Planning a Board Room?

TRAINING CENTER, DISPLAY BOOTH OR CONFERENCE ROOM?

Consider a sophisticated visual display system using RANDOM ACCESS PROJECTORS. Professional projectors that give you instant access to any slide, in any sequence or at random, on remote command. We can provide you with numerous control options for Kodak's Ektagraphics RA-960 projector, or we can specifically engineer a Mast Series 137 projector for your precise application. Off-the-shelf control options include multiple remote command systems, dual-projector operation and panel-mount slimface control. Also pushbutton "keyset" control, computer interface, dissolve systems, self-contained display units and hi-intensity modules. Call us collect or mail the coupon for full details.

Training and Selling

with One AV Format

Squibb division combines sales promotion and sales training into one format with new AV system.

by **AUGUSTINE MOSSO**

As a young, fast-growing division of E. R. Squibb & Sons, Inc., with an equally fast-growing line of ethical medical products for hospital use, Squibb Hospital Division had been faced with a dual communications problem. One, we had to create an audio-visual sales promotion format which could be used with dramatic impact to introduce each new product to medical personnel in the hospitals. Two, we had to back up each new product introduction with a complementing sales training program which not only provided all the pertinent sales information on each product, but also its medical uses and terminology, so that each of our 175 salesmen could discuss it knowledgeably with medical personnel.

In both instances, extensive use of visual material including motion pictures would be required to effectively present the information. A multi-media approach would be the logical technique, but it presented several significant disadvantages: costly projection equipment; cumbersome handling and setting up when making sales calls; and the costly and time-consuming preparation of two separate programs—sales promotion and sales training—for each new product.

After reviewing the audio-visual

systems market and various multimedia formats, we found a flexible system which was ideal for our needs. It offered three advantages which we considered significant.

First, it was an all-in-one, compact unit, lightweight and easy to handle. This assured its acceptance and use by our sales force, since our salesmen frequently had to walk a long distance from the hospital parking lot to the office where the presentation would be given. Second, it offered a method which permitted a complete intermixing of visual techniques, so that the best one—motion, animation, stills, etc.—could be used for the most dramatic and informative impact in making a specific point. Third, it offered a provision for interchangeable sound tracks which would enable us to economically incorporate the visual portions of both the sales promotion and sales training programs into a single film.

The system we chose was the Nor-elco PIP Audio and Visual Cassette System. It combines in a single compact viewing unit all the visual impact of sound motion pictures, filmstrips, animations, and graphics of all types.

Augustine Mossó is Director of Hospital Marketing Communications for the Squibb Hospital Division, E. R. Squibb & Sons, Inc., Princeton, N. J.

using simple, low-cost cassette software.

In essence, what this system does is separate visuals and sound into two separate cassette carriers—one, interchangeable audio tapes; the other, silent Super 8 color film. Both cassettes are electronically coupled for perfect synchronization.

The audio tape, moving at a constant standard speed, carries the sound track and an inaudible synchronizing track which pulses the PIP film transport system to advance the film at varying speeds. Frame rates are selected in accordance with the type of visual material. A chart, diagram or dramatic close-up is shown as a single frame, and is projected for as long a period of time as required by the narration. Thus, with PIP a diagram would be a single frame projected on the screen for the length of the narration—ten seconds, while in a sound motion picture moving at 24 fps, the same diagram would require 240 frames to cover the same narration.

With PIP a simple animated sequence can be shown at speeds as slow as 6 fps, 4 fps, or even fewer, depending upon the action. Similarly, real time "live" motion sequences can be shown at speeds substantially less than used in most sound-on-film projection systems, although PIP is capable of advancing film at any frame rate up to 24 fps.

With effective utilization of PIP's variable speed principle—intermixing still frames with varying minimum frame speeds for motion sequences—it is entirely practical to provide the desired product information in both programs within the 3,600 frames of 50 feet of silent Super 8 film, the system's capacity. In fact, we have found it possible to prepare combined sales promotion/sales training programs using substantially less than 50 feet of film.

Production of our PIP software has been assigned to the Contact Corp. division of Klemtner Advertising, Inc., our advertising agency. After thorough research into each product and frequent meetings with product managers and various medical and marketing personnel on the Squibb staff, Contact creates the audio script for both the sales promotion and sales training sound tracks, and the combined film storyboard covering the scripts.

After scripts and storyboard have been approved, Contact prepares a shooting schedule. This schedule indicates the frame rate at which each sequence is to be filmed. The goal is to select the minimum frame rate

Libb Hospital Division salesman, George Horner, inspects the newest addition to the company's combined sales training and sales programs on a new product, Cathervue.

Each salesman has his own portable PIP unit to be used for sales presentations in hospitals.

Horner first studies the PIP visual cassette with the sales training audio cassette. This animated sequence showing the Cathervue in action is part of the sales training section added at the end, and not used for sales presentations.

Making a sales call at one of the hospitals in his territory, Horner uses PIP to give the sales promotion presentation to one of the staff physicians.

could economically and realistically present the action. Comtact has used the whole gamut of speeds for live action sequences, from 6 fps to 24 fps. Animations also are prepared at varying speeds, some as slow as 4 fps. When the film receives its final edit, Comtact does a frame count and prepares separate cueing scripts for sales promotion and sales training tracks. Cueing points and frame numbers are indicated for every sequence. First, the sound track is recorded on a master tape using a sound-on-tape and open reel recorder. Next, the recording engineer, following the cueing script, records the synchronizing track onto the same master tape, using a Norelco PIP Frame Pulse Generator. This handy, electronic unit simplifies the entire procedure of synchronizing the constantly moving film track to the variable speeds of

the film.

The engineer merely dials into the generator's counter the number of frames to be pulsed, sets the indicator for the desired pulsing or frame rate, then presses the Record button when the narration reaches the motion segment to be synchronized. The generator has an automatic cutoff which stops the tape recorder at the completion of the pulsing cycle. A manual mode also is provided for single frame advancing, or for pulsing to a rhythmic beat.

Since sound and pulsing tracks are in parallel and moving in the same direction, synchronizing is simple and accurate. A blank safety zone separates the two tracks to prevent any bleeding of sound and signals which might miscue the film advance.

The final master tapes of the sound and pulsing tracks for the sales pro-

motion and sales training programs are duplicated in quantity onto cassettes by a commercial tape producer, while the completed film is duplicated by a commercial processing laboratory and readily loaded into PIP visual cassettes.

Each PIP visual cassette is distinctively labeled with the product name, as is the audio cassette with the sales promotion sound track, and both are attractively packaged in a handy vinyl storage album. The album is designed to appear like a book and bears a suitable title describing the product.

The audio cassette with the complementing sales training sound track is packaged separately in a standard plastic cassette container. It has a distinctive label identifying it as the sales training audio cassette for the product.

incorporates what we consider to be one of the most outstanding features of the PIP system which made our project feasible: the ability to interchange the audio cassettes with the sales training and sales promotion sound tracks, and still utilize the same PIP film cassette for both programs. This can be done because the full length of film in the cassette contains specific visual information for the sales training program which cannot be seen by a prospect viewing the same film and listening to the sales promotion sound track.

There are two ways this can be accomplished. One is "skip framing." With the PIP system it is possible to bypass one or more frames at a time during projection so that they are not observed by the viewer. This is accomplished by programming the pulsing track to skip past the frame or frames in question at high speed and stop at the next frame to be shown. The speed is so fast that the eye does not perceive the information on the frames as they skip by the screen. In this manner, specific frames for the salesman's information only can be inserted among the regular sales promotion film sequences, and the sales promotion pulsing track bypasses them. The sales training pulsing track, however, is programmed to stop on these frames so that they are visible only to the salesman.

Our second method is "add on." A section of film is prepared incorporating still frames, animations, live motion, etc., to be a part of the sales training program. This is added to the end of the sales promotion section of the film. Again, the sales promotion pulsing track is programmed so that this sales training sequence cannot be seen when used with the sales promotion sound track. The pulsing track simply ends before the added film is reached.

Utilizing both of these methods we are able to incorporate all the additional information the salesmen would need without the need to produce a separate sales training film.

We plan to use both methods in future sales promotion presentations for those products which would have to be presented to several different categories of prospects or audiences, such as doctors, nurses, technicians, pharmacists. Each audience would hear a sound track specifically recorded for its interests in the product, and programmed to show specific visual information designed only for that audience.

The same technique can be applied to the preparation of sales promotion programs for foreign audiences in our export operations. In this case, in ad-

dition to translating the sound track into foreign languages, the pulse track could be programmed to show specific frames which contain diagrams or other information which have been translated into the foreign language. Since as many as five frames with similar layout and color can be skipped by with virtually no detection by the viewer, it is possible to use the PIP visual cassette incorporating translations for five different languages.

Realizing that PIP was a new concept in audio-visual presentations and our salesmen would be using it extensively, we thought it a practical move to make certain that each man would be thoroughly familiar with PIP before actually using it in the field. This was accomplished in two steps.

First, in the course of holding a series of regional sales meetings, we allocated an hour in the program to introduce PIP and how it fits into our marketing plans. After the meeting, a PIP audio-visual unit was available for inspection by the salesmen, giving them the opportunity to operate it and ask questions.

Second, shortly after these meetings each salesman received his own PIP audio-visual unit and a demonstration program which had been prepared by Norelco Training and Education Systems. This gave each salesman an opportunity to leisurely study the unit, familiarize himself with its controls, and all the special features which makes PIP an extremely versatile "multi media" system.

While the operation of PIP is entirely automatic when loaded with the cassette software, this thorough knowledge of the equipment added to the professionalism with which the presentation is made. Plus, we were sure our salesmen would be asked a lot of questions about this unique system.

To date, we have completed and distributed sales promotion and sales training programs for four different products. Our salesmen have enthusiastically used them as intensive training programs to prepare themselves to meet with medical personnel, demonstrate the products and discuss them on a professional level.

Responses from medical personnel who have seen the sales promotion programs have been equally enthusiastic, since they provide comprehensive visual introduction to each product with demonstrations of how they function in actual use, and clear discussions of important features.

We adopted the Norelco PIP system as the answer to a specific marketing communications problem, and see it now as a valuable means of communications in many applications.

THE SYSTEM:

The System started with our portable. Initially, we perfected our portable Super 8 projector into the best automatic motion picture projector for sales and training on the market.

Then we took the same basic hardware that made our portable so successful and developed other kinds of projectors. A showroom model. A voice-recorder model. A chairman-of-the-board's-office console model. And a whole group of exhibit models.

The beauty of The System is its total compatibility. All the models use the same basic components. And the same film. And the same snap-in cartridge. And most important, the same tradition of creative product development, quality, and service, based on over 30 years of projector manufacturing and service experience.

STANDARD PORTABLE

Our standard model is small and portable and it fits under a plane seat. It sets the standard for the industry in picture, sound, convenience and dependability.

DISPLAY MODELS

We make a variety of models for showrooms, trade shows, seminars and unat-

tended displays with built-in projection screens 14" x 19". There are four basic models and custom models also available. Automatic cycling timers available, too.

THE CONSOLE

We designed the Console to look like it belongs in your office. Especially if you're the Chairman of the Board. It has a beautiful teak cabinet and it looks like a handsome piece of office furniture. The Console is also particularly good in showrooms and reception rooms.

REEL-TO-REEL

Our reel-to-reel accessory expands your Videotronic projector. With reel-to-reel you can use up to 60 minutes of film. It changes the Videotronic from a repeater projector to a regular Super 8 sound or silent projector. It will also accept the Eastman Super 8 cartridge.

RECORDER MODEL

Our Recorder model is a simple, effective, and inexpensive way of adding sound to Super 8mm film.

It's a Videotronic projector with the built-in capability of recording sound on film. The Recorder is a terrific tool for training, teaching or selling.

This is the symbol of The System, our family of projectors. It's the interchangeable snap-in cartridge that goes into all the models of the Videotronic Super 8. In fact, it's the compatibility of our snap-in cartridge that makes our family a family.

THE TOTAL ANSWER

To take care of all projection needs—for field salesmen, for executive offices, for public exhibits, for lobby displays, for large screen auditorium projection . . . the Videotronic System answers every possible need.

The System can—and should—be adapted for your training programs, your sales and merchandising campaigns, your public relations activities.

Other elected officials include James G. Damon, IBM World Trade Corporation-First Vice President; Reverend David O. Pondexter, Population Communication Center-Vice President, Festivals; Vincent J. Byrne, Xerox Education Group-Vice President, Finance; Thomas Hope, Hope Reports-Vice President, Information; Edward Oglesby, Virginia Department of Education-Vice President, Selections; Daryl I. Miller, American Dental Association-Secretary; and Dr. Anna L. Hyer, National Education Association-Treasurer.

New members elected to the Board of Directors are: Peter Boyko, Capital Film Labs; Harriet Lundgaard, Educational Media Council; Rev. Herbert F. Lowe, National Council of Churches; Herbert Farmer, University of Southern California; Bernard Landau, New York Stock Exchange; William Grayson, Smithsonian Institution; Raymond Shady and John G. Spence, both of Eastman Kodak Company.

Short Takes

A Conference on the Use of Audio-visual Archives as Original Source Materials, to be sponsored by the National Archives in cooperation with the History Department of the University of Delaware, will be held November 9-10 of this year at the Conference Center of the University at Newark. This will be the eleventh National Archives conference relating to source materials for historical investigation and the first to be held outside the Archives Building in Washington.

Don Konny Day was celebrated last month when the popular Chicago-based account executive reached his

25th year milestone with Modern Talking Picture Service. Balloons and T-shirts added to the festive air.

Neal McLain has been elected president, and Charles Whitecomb vice-president, of newly formed Mediatech, Park Ridge, Ill., specializing in videotape to film transfers via the new Teledyne CTR-2 color telefilm recorder.

The Color Center, Inc., New York, is acquiring the studio facilities of Telic, Inc., also of New York, and will operate them as a division of Color Center, Inc.

Woody Siegel, who has written, directed and produced in Hollywood and New York since 1936, and has been president of Telic, will now limit his output to two or three pictures a year.

Bernie Barnett, Color Center President, said that the new facilities will expand his company's one-step services to include sound and insert stage rentals as well as the other lab and post production services already offered.

Producers Service Corporation, a subsidiary of Boothe Computer Corporation, has acquired the assets and work in process of the Photo Instrumentation Division of the Traid Corporation. Lee Shrout, PSC president, said the acquisition gives Producers Service the base for a broader product line.

The company presently designs and manufactures special effects optical film printing equipment and mechanical film drive and control systems for the motion picture and television industries. The new acquisition will enable it to produce, market and service pulse data recording cameras, gun cameras, film movements and transports, precision projectors, viewers and readers, stop-motion projectors and intervalometers.

Armed with a new, small IBM system, officials of Motion Picture Laboratories, Inc., in Memphis, are attacking one of the motion picture processing industry's thorniest problems—film losses.

"We are recovering in a few months the total cost of our new System/7," said Frank McGeary, MPL president. "We are in closer control of the tens of thousands of dollars worth of film losses we've been experiencing in recent years."

He said the computer monitors the printing of 25 kinds of raw films on each of their automated, high-speed printers. This monitoring gives management moment-by-moment control of its raw film inventory and provides a counter-check on MPL's billing system.

A flying team of technicians is the basis for a new customer service program introduced by Audiscan, Inc., which features a group of Audiscan engineering and marketing experts who can be on any customer's doorstep, anywhere in the nation, within 24 hours or less after receiving a call for assistance.

Any person using or working with the Audiscan system, whether on a technical, program production or selling basis, can phone the company's headquarters in Bellevue, Washington, toll-free at any time of day or night to discuss their needs. If on-location help is required, one or more of the specialists are dispatched by air flight to assist the customer.

The Naval Air Reserve has appointed Commander Carl V. Ragsdale as officer-in-charge of the newly established Mobile Photographic Unit at the Naval Air Reserve Detachment, New York.

Commander Art Ward was named as executive officer of the unit.

Commanders Carl Ragsdale and Art Ward named to new Navy Mobile Photographic Unit.

Both officers have long established careers in the New York audio-visual field. Ragsdale heads his own motion picture company, Carl Ragsdale Associates. Ward is also president of A & R Recording Studios, serving the film industry.

The Mobile Photo Unit was established to provide the Navy with motion picture services on the eastern seaboard, operating as a component of fleet requirements.

Cine Magnetics, Inc., Mamaroneck, N.Y. has been acquired by Hospital Baby Portraits, Inc., also of Mamaroneck, and the two companies will merge into one corporation named Cine Magnetics, Inc.

Hospital Baby Portraits with sales of \$1,200,000 will be operated as a division of Cine Magnetics. Established in 1948 by Fred Berk, the company provides color photographs of newborn babies through hospitals located in 15 states.

Cine Magnetics, with sales of \$300,000, operates a motion picture processing laboratory in Mamaroneck and an audio-visual sales, rental and service division, Projection Systems International, at 305 East 46th Street, in New York.

IBM's Data Processing Division has ordered more than 300 Sony U-Matic Videocasette Systems for market and management communications.

MULTI-IMAGE AUTOMATION OFF THE SHELF

1. **QUADRA QUE 1 PROGRAMMER**—Quality and economy in a 4-channel magnetic tape programmer, complete with built-in power relay for motion picture control—automate any mix of four projectors.
2. **QUADRA QUE 2 PROGRAMMER**—Expands Quadra Que programming to eight channels or adds four channels to a Dynamic Que Dissolve—in either case using only a single tape track for pulses.
3. **DYNAMIC DISSOLVE CONTROL**—First and still best solid-state, multi-speed slide dissolve control for S&S and Kodak projectors—unmatched fast-to-super-slow dissolves, plus dazzling special effects.
4. **QUE SETTE RECORDER**—A 3-track cassette recorder specifically designed for use with multi-channel mag-tape programmers—uses one track for pulses and two additional tracks for amplified stereo sound.
5. **DYNAMIC QUE DISSOLVE**—The multi-speed dissolve control with its own built-in programmer to automate "Cut," "Medium Dissolve," "Lap Dissolve," "Alternate" and "Standby" with pushbutton ease.
6. **MEDIA MIX PROGRAMMER**—The original "out-performer"—a 27-channel, punched tape programmer with built-in synchronizer—an entire stage crew in a 10-pound package the size of a cigar box!
7. **TRI CUT CONTROL**—One compact unit to create high-speed "Cut" dissolves on each of three pairs of Kodak slide projectors for multi-screen shows—the bridge between conventional projection and multi-speed dissolves.
8. **SELECTROSLIDE 900 SLIDE PROJECTOR**—shows up to 500 slides non-stop...shows 'em five times as bright...changes 'em up to three times as fast. This is the *serious* slide projector you've been hearing about.

short, the whole show. Multi-image without mystery...or misery. We've solved the problems, packaged the answers, and put them on the shelf, wide-wide. For more information and the address of your nearest Spindler & Sauppé dealer, write us today.

Business Screen buyer's guide

TO AUDIO-VISUAL PRESENTATION EQUIPMENT OF PARTICULAR INTEREST TO INDUSTRY

16MM MOTION PICTURE PROJECTORS

ALLIED IMPEX CORP.

Four basic models of the Bauer P6 are available. P6 Automatic M152 is optical/magnetic, self-threading, has quartz iodine lamp. P6 Automatic 300L (optical) and T (optical/magnetic) have Marc 300 lamp with provision for quick changeover accessory. P6 Studio-Double Band is interlocked with built-in magnetic tape deck. P6 Synchron has synchronous motor and manual threading, is designed for production use.

ARRIFLEX CORP. OF AMERICA

Sonorex Double 16 interlock projector has halogen lamp, cam-driven transport system, is capable of recording, transfer, mixing.

A.V.E. CORP.

A.V.E. X-300 has a xenon light source. A.V.E. Canary is magnetic-optical with quartz halogen light source. Interlock, continuous and professional big screen models also available.

BELL & HOWELL CO.

Five basic models ranging from the heavy duty JAN 614CEM (optical/magnetic) through the 820L (optical/magnetic), 566T Specialist Autoload with Marc 300, 1552 Specialist Autoload, and 1540A Specialist with Manual threading.

BERGEN EXPO SYSTEMS, INC.

Externa Continuous Projector, based on the Royal M-O, designed for convention and display use. Other models with arc heads.

EASTMAN KODAK CO.

Several models of the Pageant projector are available featuring arc or tungsten lamps, and up to 25-watt sound for auditorium use.

GRAFLEX DIV. SINGER CO.

Six models offer such variable features as arc and tungsten light sources, instant load threading, high audio output and optical-magnetic capability.

HONEYWELL, INC.

The F16 has manual threading, 1000 watt lamp, 15 watt amplifier. Other models are self threading, have magnetic play back.

INTERNATIONAL AUDIO-VISUAL, INC.

Sixteen models available with self and manual threading, xenon and halogen lamps, optical and magnetic sound, various other features such as changeover, Marc 300, 5000' capacity Modular construction.

KALART/VICTOR CO.

Several models are available offering options of magnetic and optical sound, varying light sources, including Marc 300, snap-out reels, color coded threading. Kalart/Victor Moviematic models are repeater projectors with built-in screen.

LAFAYETTE INSTRUMENT CO.

Sound and motion analyzer. AAP 700 has silent/sound single frame, variable speeds.

L-W PHOTO, INC.

Various models of analytical projectors with variable speeds. 224-Athena has precise speeds of 1 to 24 fps. plus sound at 24 fps. Also TV film chain projectors.

NORTH AMERICAN PHILIPS CORP.

FP 16 (magnetic or optical) features arc or xenon lamps, 20 watt amplifiers, 5000 ft. capacity reels. Designed for permanent installations.

PAILLARD, INC.

Bolex S-311 and S-321 (optical-magnetic) have 1000 watt lamps, variable speed with stroboscope.

W. A. PALMER FILMS, INC.

PGSS magnetic/optical interlock projec-

tor based on the Graflex, with recording, playback and transfer capabilities.

VIEWLEX, INC.

Several models are available, with manual or automatic threading, easy set-up, solid state sound system. Also available is the Cine Sound 16, a 16mm sound film viewer with built-in screen. The JAN 2-3-4 are heavy duty projectors built to joint army-navy specifications.

SUPER 8MM MOTION PICTURES PROJECTORS

ALLIED IMPEX CORP.

Bauer T16 has instant replay, high light output, quiet film transport.

BOHN BENTON INC.

Institor is a cartridge-load, 20-minute capacity, magnetic sound projector in an attache-style case with built-in screen. The Bohn Benton Console has similar operating features to Institor but is housed in a permanent fixture cabinet.

DE JUR AMSCO CORP.

Remote Command can be stopped and started by remote control and advanced frame by frame. Eye Fidelity magnetic sound projector comes in playback only and record/playback models.

A. B. DICK CO.

Model 60—5-minutes running time, continuous loop cartridge, magnetic sound, built-in 3 3/8" by 4 1/2" screen.

EASTMAN KODAK CO.

Supermatic 60 Sound projector has low profile, magnetic sound, auto threading and rewind.

FAIRCHILD CAMERA & INSTRUMENT CORP.

"The Agent," Model Seventy-07, weighs 17 pounds, fits in small attache case. Seventy-41 is a larger, console model.

KARL HEITZ, INC.

Norimat-S has magnetic record & playback on integrated, coupled cassette tape recorder.

HERVIC CORPORATION

Several models of Heurtier projectors available, some with stereo sound, an extra bright light source for auditorium use.

HONEYWELL, INC.

Elmo ST8M is a magnetic sound projector with 150 watt lamp, 800 ft. reel. Elmo ST8MO has optical/magnetic sound.

MPO VIDEOTRONIC PROJECTOR CORP.

MPO Videotronic Super 8 is a cartridge load 15-minute capacity, magnetic sound projector with built-in screen, 150 watt lamp, 5 watt sound. Attache style case. Also available are console with teak-wood cabinet and external models.

ILLARD, INC.

lex SM8 has 100 watt lamp, 800 ft. film, automatic threading.

HEEM MANUFACTURING CO.

Model 4600 is a hand-held magnetic film projector taking a 5-minute cartridge.

CHNICOLOR INC.

Models 1000 and 1300 are portable, using continuous loop cartridges. Available in either optical or magnetic versions.

WFLEX, INC.

Superviewer V-190 takes continuous loop cartridge, is console style viewer. Model 92 has sound capability on built-in standard tape recorder. Film stops on cue by taped audible cue.

PULSED SUPER 8MM FILMSTRIP/MOTION PICTURE PROJECTORS

JUR AMSCO CORP.

Super 8 is a tape-controlled motion picture projector, reel to reel, separate cassette sound. Single frame up to full motion with synchronized sound. Solid metal construction.

ORTH AMERICAN PHILIPS CORP.

Relco PIP system projector uses Super 8 film and audio tape in separate cassettes synchronized by pulse tape. Film is advanced at any speed up to 24 fps. thus operating as a filmstrip or motion picture projector Built-in rear screen or front projection.

**ENTION COMMUNICATION
SYSTEMS, INC.**

MS-10 A-V set projector uses Super 8 film and audio tape packed into single endless loop cartridge. Film is advanced at speeds up to 8 frames per second, permitting single frame or half advance animation without black-out. MS-101 and 102 Show Sets are designed for convention and display use.

SOUND FILMSTRIP PROJECTORS

DISCAN, INC.

See models—all automatic, with continuous loop 16mm filmstrip and audio tape in sealed cartridge. Built-in screen.

L & HOWELL COMPANY

Model 755A is console style, 35mm single frame, cassette sound. Model 751-B packs in attache case. Record/Playback on both models.

CHARLES BESELER COMPANY

Model 505 has film and sound in magazine cartridges, automatic operation, built-in screen, 35mm, packs in attache case.

KANE CORP.

Many models available. Cassette Super-

Micromatic is automatic, 500 watt, 35mm. Super Micromatic is automatic or pushbutton, uses discs instead of cassette. 35mm. A-V Matic has built-in screen, sound on disc. Console style, 35mm. Automatic Flip-Top comes in folding case, sound on disc. 35mm. Mite-E-Lite is manual, sound on disc, budget price. 35mm. Cassette Commander is automatic, comes in portable case.

GRAFLEX DIV. SINGER CO.

Auto-Vance II is a 35mm single frame projector with built-in screen. Sound is synchronized by audio cassette. Automatic advance. Messenger VII has a larger screen, similar capabilities.

LA BELLE INDUSTRIES, INC.

La Belle sound filmstrip projectors come in three basic designs: Courier, which is a portable, continuous, battery-operated projector with built-in 5" by 8" screen. Sentinel, which is larger, and designed for point-of-purchase or display, has an 8 3/4" by 12" screen. Tutor is a front-projection model. Courier, Sentinel and Tutor come in single-frame 35mm and 16mm versions. The latter uses La Belle's Commpak 16mm sight and sound cartridge.

MC CLURE PROJECTORS, INC.

Several models available using 35mm single frame filmstrip, disc and cassette sound, automatic and manual advance.

OPTISONICS CORP.

Mastermatic II is a 35mm single frame filmstrip projector with a built-in screen utilizing a Unipak endless loop film and tape sealed and synchronized cartridge. An optional responder unit is available. Both front and rear projection is possible.

**STANDARD PROJECTOR &
EQUIPMENT CO.**

Several models available using 35mm single frame filmstrip, disc and cassette sound. Manual and automatic operation. CP-300 model has cartridge load.

TEACHING DYNAMICS

Synchronous sound, slide and filmstrip projectors. Automatic operation. 10 watt sound.

TM VISUAL INDUSTRIES

Showoff/Soundoff 865 is a packaged unit containing 35mm filmstrip projector, cassette player and self-contained screen. Manual operation. Also projects slides. AV-2200 Synchromatic is a filmstrip projector with cassette sync sound in attache case.

VIEWLEX, INC.

Several models provide manual or automatic advance, disc and cassette sound, single and double frame filmstrip. Models for large and small audiences.

SOUND/SLIDE EQUIPMENT

BUHL OPTICAL CO.

1200 watt projector for large audience use. Also random access models.

BUSCH FILM & EQUIPMENT CO.

Busch big-screen sound cine-slide projection unit has 28" by 28" square plexiglass screen built in.

CREATRON INC.

Cinemasound Model 2000 combines slide projector, cassette tape deck and sync pulse generator into one integral unit.

DECISION SYSTEMS

Model 80 slide projector provides random access for any of 80 slides within 1 1/2 seconds. Carobeam model slide projector has 1200 watt quartz lamp.

EASTMAN KODAK CO.

Ektagraphic Carousel 35mm slide projectors are available in several models with such options as arc lamp, random access, remote control, automatic focusing, etc.

GAF CORPORATION

970 A/V model is 2 x 2 projector, accepts auto-sync tape synchronizer and slide seeker random access.

HOPPMANN CORP.

Modular slide projector offers a wide choice of modules and accessories for various needs.

HOWE FOLDING FURNITURE CO.

Coxco Sound/Slide portable rear-screen projection unit uses 35mm slides and audio cassettes. Record/Playback and playback models are available.

KALART/VICTOR

Kalavox 35mm slide projector system uses Carousel projector, provides record and playback separately for each individual slide.

MAST DEVELOPMENT CO.

Model 138-6 multiple dial system controls Kodak RA-960 random access projector. Also a wide variety of special slide projector control systems.

3M CO.

Sound-on-slide system for 2 x 2 slides with accompanying sound discs.

MONTAGE PRODUCTIONS, INC.

Narrator 1000 is a synchronized sound/slide projection system utilizing Carousel projectors fitted with a special record/playback unit into one package.

MOTIVA LTD.

Theaterama/one is a self-contained rear projection unit.

PRESENTATION TECHNICAL AIDS

High-light triples light output of Kodak Carousel.

PROGRAMO INC.

Sync sound unit incorporates Carousel projector. Several models available.

RAPPAPORT EXHIBITS INC.

Space Scan Duo is a styrene cabinet

with Polaroid screen on pedestal. Equipped with Carousel slide or Technicolor continuous Super 8 projector.

REALIST INC.

Superlight system provides 2200 lumens. Works with Ektagraphic projectors.

SETCO AUDIO VISUAL INC.

Synchromedia I combines Ektagraphic slide projector with Norelco Synchro-player for sound/slide sync programs.

SPINDLER & SAUPPE

Various Selectroslide 35mm slide projector models offer random access, ultra bright light, dissolves, etc. Selectroslide 900 shows up to 500 slides non-stop with interlocking trays.

TEACHING DYNAMICS

Model TD-201 provides automatic sync operation, cassette sound with any remote control projector.

TELEPRO INDUSTRIES, INC.

Model RA-60 provides 6000 lumens, random access and other features. Works with 3 1/4" by 4 1/4" and 2" by 2" slides.

TM VISUAL INDUSTRIES, INC.

Synchromatic AV-2200 is attache case style, cassette record & playback, slides and double frame filmstrip projector.

TAPE CASSETTE DUPLICATORS

AMPEX CORP.

Model CD-200, cassette-to-cassette, can duplicate up to 53 hour-long cassettes in one hour.

AUDIOTRONICS CORP.

Duplicates 3 cassettes from another. 4 from external source.

DU KANE CORP.

Duplicates 2 cassettes from another.

INFONICS INC.

RC-2 duplicates 4 cassettes from reel-to-reel. CC-2 duplicates 4 cassettes from another. High speed. CS-2 duplicates 8 cassettes.

PENTAGON INDUSTRIES, INC.

Various reel to cassette and cassette to cassette duplicators. S-1000 duplicates 8 cassettes at 15 ips.

RECORDERX CORP.

Model CS-000 duplicates 5 cassettes at 7 1/2 ips.

TELEX COMMUNICATIONS

235CS duplicates 9 cassettes 7 1/2 ips.

VIEWLEX, INC.

Mark I Duplicator consists of master and up to 8 slaves. Duplication time for 60 minute cassette is 4 minutes.

WOLLENSAK/3M COMPANY

Model 2750 Master will duplicate on up to 10 Model 2760 copiers arrayed in tandem.

PROGRAMMERS AND DISSOLVE CONTROLS

ARION CORP.

Command Performer uses digital signals to control unmanned operation of projectors and environments. Other combination encoders and decoders control up to 119 functions. Model 538 Flipper controls rapid dissolves on two Carousel projectors.

COLUMBIA SCIENTIFIC INDUSTRIES

Audion cassette sound synchronizers for remote control filmstrip and slide projectors. Model 370 uses four tones to advance three projectors singly or in unison. Media Master 2001 controls up to 20 functions such as advances and dissolves.

DU KANE CORP.

Programmer 9A1070 controls up to 16 functions on 8-channel punched tape.

EASTMAN KODAK COMPANY

Carousel Dissolve Control Model 2 has selectable duration lengths of 6-10-14 seconds.

HAMTON ENGINEERING ASSOCIATES

Model MTP-880R controls up to 80 functions by pulses on magnetic tape. PD-1200A Dissolve Control is continuously variable.

HOWE FOLDING FURNITURE CO.

Coxco Municator is a cassette recorder which adds synchronized sound to filmstrip and slides with subaudible pulses.

INTERMEDIA SYSTEMS CORP.

Various programmers on punched tape and magnetic tape pulses. R-7 Dissolve Unit is continuously variable.

KLITTEN COMPANY

Model 2205 controls four functions with frequency pulses on tape.

LA BELLE INDUSTRIES INC.

Pla-Matic is a sound synchronizer for use with slide and filmstrip projectors.

3M COMPANY

Synchronizer uses 60Hz signal to trip slide projectors.

MONTAGE PRODUCTIONS INC.

Montage Audio/Mate synchronizes all remote control slide, filmstrip and stop frame motion picture projectors with cassette sound.

NORTH AMERICAN PHILIPS CORP.

Synchroplayer synchronizes stripfilm and slide projectors, provides complete separation between narration and cue tracks. LCH1000 PR records narration and inaudible pulses for sync sound. Norelco TE850 generates frequency pulses for master pulse tracks on tape. Norelco TE901 is a frame pulse generator for professional sound studio use in the Norelco PIP system.

OPTISONICS CORP.

Sound O Matic I is a programmer re-

corder to sync sound with any remote projector.

SPINDLER & SAUPPE, INC.

Model 780 provides automated control of three complete dynamic dissolve systems plus nine auxiliary devices. Model 772Q Dynamic Cue Dissolve is a multi-function dissolve and mini-programmer in a single package. Operates two slide projectors. Quadra Cue 790 controls four functions with frequency pulses on magnetic tape. Model 789 provides 3-screen control system via 27-channel media mix programmer.

UNITED AUDIO VISUAL CORP.

UAV Cuemaster is a multi-media program control console capable of punching a 1000 cue show electrically in 10 minutes.

WOLLENSAK/3M COMPANY

Model 2550 AV controls functions of slide projector with magnetic tape frequency pulses.

VIDEO EQUIPMENT

AKAI AMERICA LTD.

VTS-100 uses 1/4" tape; 11 1/4 ips speed b/w only, 20 min. running time. Weight 17.9 lbs.

AMPEX CORP.

VPR series are one-inch helical scan videotape recorder/playbacks with advanced capabilities. Color and b/w. VR-420 is a new 1/2" Color recorder/reproducer in EIAJ standard. New video Cartridge recorder/player is 1/2" size. Format conforms to EIAJ standard.

AUDIOTRONICS CORP.

PVR 709 is a VTR with optional electronic editing and color features available. Also b/w cameras.

CONCORD COMMUNICATIONS SYSTEMS

Complete line of color and monochrome VTRs and cameras in EIAJ standard 3/4" video cassette recorders and players.

CRAIG CORP.

Three models of EIAJ standard VTRs.

INTERNATIONAL VIDEO CORP.

IVC-700, 800 & 900 are one-inch color and b/w video recorder/playbacks.

KALART COMPANY

Telebeam TV projection system can be operated either front or rear screen.

MAGNAVOX CORP.

New low cost series 300 color camera.

MOTOROLA SYSTEMS, INC.

Teleplayer transforms EVR cassette into TV signals for viewing on monitor.

PANASONIC VTR CCTV

Color and b/w 1/2" VTR's in EIAJ standard.

3/4" and 1/2" video cassette models recently announced.

FILIPS BROADCAST EQUIPMENT CORP.

AV-3403A/52 is a one-inch VTR with slow motion and stop action, b/w and color with adaptor. TV cameras.

TECHNIBADEN CORP. OF AMERICA

Half-inch mono and color VTRs in EIAJ standard format.

SONY CORP. OF AMERICA

VCRover II is a completely portable battery-operated half-inch VTR system that can be carried and operated by one person. AV-3600 is a half-inch video recorder in EIAJ standard 3/4" J-Matic Color Videocassette.

WILLIENSAK/3M COMPANY

"High Energy" 3/4" Color Videocassette System.

SCREENS

COMMERCIAL PICTURE EQUIPMENT CO.

Fast-Fold front and rear projection screens in all sizes.

DELITE SCREEN CO.

Projection screens in many sizes and finishes. Model B has automatic tensionizer and magnetic attachment to prevent keystone. Picture King, at 64 ft. is the largest portable tripod screen available. Also rear-screen materials for permanent mounting, Deluxe portable rear screen.

PAPER SHADE & SCREEN CO.

Full line of sizes and surfaces.

WESTMAN KODAK CO.

Deluxe 40" by 40" screen is made of aluminum foil laminated to fiberglass shell. Can be used in full room light.

RAFLEX DIV., THE SINGER CO.

Complete line of Radiant screens, with pods, wall and ceiling type, front and rear projection.

SCHUPPMANN CORP.

Portable rear projection screen system displays 16" by 24" image. CPS-48 multi-media console provides display from a variety of projection devices housed within.

MOX MFG. CO.

Full line of sizes and surfaces.

POLACOAT, INC.

Wide range of front 8 rear projection screens for portable and permanent applications.

PROMOTION AIDS, INC.

Crystal Vision stretch screen conforms to different sizes, shapes for cocoon and wrap-around effects.

SPECTROCON, INC.

Rigid and flexible rear screen materials.

CABINETS, STANDS, STORAGE & CASES

ADVANCE PRODUCTS CO.

VTR cabinets provide room for recorder, camera, tapes, cables, tripod and other supplies. Also, Pixmobile series of tables and stands.

ARCHON INC.

Compact A-V unit contains three projectors: 16mm sound, slide, and overhead, and 30" by 40" rear projection screen.

JACK C. COFFEY CO.

Wide variety of storage cabinets and tables for A-V equipment. Luxor 700 is a mobile VTR console.

COLUMBIA SCIENTIFIC INDUSTRIES

Multi-media stand for Carousels permits two or more images on same screen with perfect registration.

FIBERBILT PHOTO PRODUCTS

Over 100 cases available custom made for various types of audio visual equipment.

GRUBER PRODUCTS CO.

Wheelit folding carts transport AV equipment, including VTR.

NEUMAIDE INDUSTRIES, INC.

Storage cabinets and mobile stands for audio visual equipment and materials.

RELIANCE FOLDING CARTON CORP.

Audio-visual packaging for cassettes, filmstrips. FSCA-1 holds four 2" film-strip cans and cassettes in rattle-free plastic case.

SCHUESSLER CASE CO.

Film shipping cases of domestic fibre with steel corners. Various sizes available.

WELT/SAFE-LOCK INC.

Projection stands and cabinets.

H. WILSON CO.

Mobile cabinets for housing motion picture, slide, stripfilm and video equipment. Mobile VTR center stores cameras, tripods, tapes, monitor and well as VTR in mobile storage cart.

MICROPHONES

SHURE BROTHERS INC.

Full line of microphones for professional recording and PA work.

REELS AND CANS

COMPCO CORP.

All steel 16mm reels and cans.

GOLDBERG BROS.

Flexible 8 and 16mm reels and cans.

PLASTICAN CORP.

Slide frames provide orderly storing of slides. 20 slides in flexible plastic frame fits standard looseleaf binder. Filmstrip cans and labels.

PLASTIC REEL CORP.

Plio Magic plastic reels, cans and shipping cases, etc.

RICHARD MANUFACTURING CO.

Polyethylene Poly-Con filmstrip containers with hinged lids in many colors. Several sizes available.

TAYLOREEL CORP.

Full line of metal reels and cans.

SPECIAL PURPOSE EQUIPMENT

BUHL OPTICAL CO.

Standard wide angle, zoom and anamorphic lenses for various projectors. Also mirrors, lens attachments.

CHRISTIE ELECTRIC CORP.

Xenolite lamp provides ultra bright images when used with various types of projectors.

CHARLES MAYER STUDIOS

Hook N Loop presentation boards in 24 colors hold heavy and dimensional items as well as flat visual displays.

OPTICAL RADIATION CORP.

Cine 16 makes possible 16mm presentations at light levels previously obtainable only with 35mm projectors.

Put the Message First and the Means Will Get It There

Are we paying too much attention to the *means* of communication to the detriment of the *ends* we must attain: *the message*?

Is the nation's leading telephone system showing corporate withdrawal symptoms in its euphoric acceptance of a vast closed-circuit television network is sufficient to its vital communication ends? What of your *publics*, from a Bell, from youth to the elderly—from dubious Manhattan to the unpredictable voters of California?

Just don't so imbued with your own management talking to one another those Picturephones/video monitors that *film*, *film professionals* and *film's vast potential for reaching out to millions who need to know* get left behind.

Today's truism, like it or not: *never have we had so many ways of putting images before so many people and so few images worthy of that tremendous potential.*

Think about it.

Needed: "Trained Professionals"

Jack Valenti, president of the Motion Picture Association of America, commenting on "The Trained Professional: A Vanishing American" in a *READER'S DIGEST* piece of recent date reminds us that

"I would count the foremost asset of a respected man to be that discipline in himself which instructs him in the knowledge of his craft. This means dedication and a work schedule that sometimes can be dismaying. Still, there is no other way to acquire that standard of excellence which is the mark of the professional and the man's specification for achievement."

Are your corporate images-on-film achieving their fullest dimension, winning public and employee acceptance and understanding so vital to embattled free enterprise? That's a job for professionals.

World Showcase Opens Nov. 20-24

The annual International Industrial Film Festival—the world's foremost showcase of the best in business/industrial films—moves to Amsterdam, Holland for its 14th year. The 1972 edition will be held November 20-24 under the auspices of the Council of European Industrial Federations and will be organized by the Amsterdam Industrial Association in cooperation with the Federation of Netherlands' Industry and the Netherlands Christian Employers' Association.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services—RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists.

continued

being born out by the very fast start the program has made in bookings on television.

The half-hour color film is called *The Challenge of Santa Barbara*. It was produced for Humble by World-Wide Video Associates, and is available from Modern Talking Picture Service.

New Employee Is Often the Forgotten Man

It's not unusual for a firm to spend hundreds, perhaps thousands, of dollars to carefully recruit the right can-

didate for a job. Then, after a hasty "indoctrination" the first day, the new employee suddenly discovers that he is a forgotten man. Neither supervisor nor fellow employees seem able to spend time to help the new man get off to a good start.

Welcome Aboard emphasizes the importance of positive, helpful orientation. At the same time, it reveals the high costs of neglecting new employees in terms of lowered morale, reduced personal and departmental efficiency, and increased employee turnover.

Welcome Aboard also points out that the "first day" syndrome is not limited to new hires. It can happen to

old hands when they are transferred to new departments or locations. The 21-minute color film is intended to open the eyes of supervisors, managers, and personnel who have a blind spot for new employees.

The film is available from Roundtable Films, 113 N. San Vicente Blvd. Beverly Hills, Ca. 90211.

Those Dangerous Sliding Glass Doors

In a new 60-second National Safety Council public service TV spot singer Della Reese tells how severely she was injured when she fell through a sliding glass door. Some 250,000 estimate injuries like this happen every year.

Singer Della Reese featured in new safety film.

Miss Reese encourages the installation of appropriate and now often legally required safety glazing material.

The spot was produced by Cavalcade Productions, of Wheaton, Ill., and sponsored by the NSC and the Consumer Safety Glazing Committee.

International Harvester Newreel for Farmers

International Harvester Company has just released a 75-minute film entitled *News and Views in Agriculture* for use by its franchised farm equipment dealers at the "Preview 72 Open House" family entertainments for customers and friends.

Divided into two segments, the first half of the film presents a rodeo competition; odd ventures in ag future; exploits of a lady farmer; working of a beef factory; and some nostalgic scenes of yesteryear depicting early beginnings in threshing.

The second half concerns itself with farming—a five letter word. Norman Bourlaug, the Nobel prize winner and his unceasing battle against hunger in undeveloped countries; new trends in raising chicks; a modern family comedy episode that heightens urban understanding of rural farm life.

Water Pollution:

How We Stand Today

The 1st Pollution is a new film about water pollution problems: what they are, who produces them, what's being done about it now, and what will happen in the future.

A historical comparison relates early pollution problems to today's conditions in the Potomac River at Washington and the Kanawha River at Charleston, West Virginia. Visits to the Armco Steel plant at Middletown, Ohio; Dow Chemical at Midland, Michigan; and the infamous Houston Ship Channel show industrial water quality management technology.

Tomorrow's new pollution control potential is illustrated by the "living filter" which puts treated waste water in the ground instead of streams and lakes; San Francisco's decades' old irrigation of Golden Gate Park with waste water; water reclamation in Los Angeles; recycling of waste chemicals to a resource; and a new system of sewage treatment where waste-eating microbes are fed virtually pure oxygen. EPA scientists in Duluth, Minnesota and at Shayler Run, Cincinnati conduct basic research on the effect of wastes on life in the waters.

The 1st Pollution offers no simplistic solutions, no diatribes, no doom-and-gloom talk, and no sure answers. It *does* offer the environmentally-conscious citizen and student an opportunity to get a first-hand view of water pollution problems. It was produced and is being distributed by Stuart Finley, 28 Mansfield Road, Falls Church, Va., 22041.

What to Do for

Drug Overdose Patients

In 30 hectic minutes, *What Did You Take* moves its audience into hospital emergency rooms as doctors battle drug overdose emergencies. The film, made for the New York State Department of Health, is designed to give basic medical instructions and show technical details for the many doctors in outlying areas not presently equipped with training and experience to cope with overdose accidents. This type of training has been given a high priority in the state.

Narrator of the film is Dr. Harold Ligg, associate director of psychiatry and addiction at New York's Beth Israel Hospital, where the film was made. Treatment is shown for all major classes of drugs: opiates, hallucinogens, sedatives and stimulants.

What Did You Take was produced by Benedict Magnes, directed by William C. Kyriakis, and is available from Knightsbridge Productions, 15 E. 38th St., New York 10016.

PRIZE PACKAGE

CFI has won many Academy technical Awards.

We're proud of these awards, of course. But the awards that give us the greatest satisfaction are the countless awards won by our clients who trust us with their work.

CFI clients, over the years, have won every conceivable industry honor—from major Academy Awards in films and Emmys on television, to innumerable prizes for technical films and documentaries.

At CFI we bring to bear all the technical and creative skills we've built up over the years to each job. And these skills are comprehensive. Under CFI's one roof everything needed by the professional cinematographer can be accomplished. CFI's capabilities include complete title services and all types of special optical effects in addition to processing.

From the technical point of view, every can of film we deliver is a prize package.

When the cinematographer or director entrusts CFI with his work, he's free to concentrate on creativity in his art. He knows that what he'll see on tube or screen is what he expects to see.

What more can a truly professional processor promise?

CONSOLIDATED FILM INDUSTRIES

959 Seward St., Hollywood, California 90038 / HO 2-3161

Letter from a Veteran Producer to an Eager Young Filmmaker

Dear Mr.:

Your resumé is interesting and shows a creditable background. In fact, it is so creditable and promising as to justify me in taking the time to try to persuade you to change your plans to go into the motion picture industry.

Unless you have an independent income and can afford to work as a hobby, film business is a bad bet, particularly for the crafts area. You can't even get an entry-level cameraman job with the major studios or television networks because of union bars. That leaves only the producers of industrial, educational, and religious films, which are practically all quite small, with no craft people on staff; we hire crews only when we have production jobs, and when we get our people from the free lance pool we always call *experienced* men, which leaves very little opportunity for the "apprentice." But here is the deadfall—even for the experienced cameramen with reputations

and strong producer contacts, the work available is miserably sporadic . . . the cameraman works a week and goes on the unemployment rolls for the next month or two.

The problem would become even more acute when you come here to Hollywood from out of town, without a network of friends in the industry who can tell you about openings and give you referrals.

The hell of it is, I can understand and sympathize with your yen to make movies, professionally. All of us in the business recognize its miserable characteristics, even the lucky ones, but we stay in it because we're hooked—partly because we've spent too much time here to break out and get a decent job elsewhere, but mainly because the business has us *literally* hooked, in the addict sense. It's for that reason we look with horror at a young man, particularly one with family responsibilities and a need for a steady income

and a future, who contemplates leaving a steady job in the advertising business to deliberately walk into a swamp.

However, the fact that you took time out to study film production at USC last year indicates that you're already hooked. Therefore, I suggest that you look for a film job in your home area where you are already known and have contacts. Actually, the regional film producers often have steadier work available, even though the pictures are smaller and less glamorous . . . also, without recourse to a free-lance pool, they maintain steady staffs. And, with your family responsibilities in mind, if the movie business doesn't pan out you will be in a better position to get back into the comparative security of advertising.

Yours,
Cap Palm

Look at things both ways

Wyman-Gordon Co. does with two Da-Lite Screens

Wyman-Gordon Co., of Worcester, Mass., has a reputation for looking at things both ways before they make an engineering decision! And they made a sound decision on projection screens by installing both a 6' x 12' rear projection screen and a 7' x 7' Executive Electrol®.

The Da-Lite Executive Electrol disappears into the ceiling when not in use to keep the conference room uncluttered. And, with the Da-Lite Rear Projection screen, the remote-controlled projectors are out of the way too!

Da-Lite offers a complete line of electrically operated screens in sizes from 50" to 20' square. Da-Lite rear projection screens are available in Da-Glas, Da-Plex and Da-Tex materials.

For all the facts, and the name of your nearest Audio-Visual Specialist, call or write Dept. B.S.

DA-LITE SCREEN COMPANY, INC.

"The package solution"

...to total audio-visual programming

Somebody had to be first with one-stop shopping—and who could that somebody be but Viewlex!

Up to now, you've had to deal with a series of producers, writers, photographers, sound technicians, . . . and one or more equipment suppliers to put together a complete audio-visual program.

Now, Viewlex has it all. We've put the 'software' together with the 'hardware' to offer you a complete, simplified audio-visual systems service—the most effective audio-visual equipment plus a coast-to-coast network of experienced, creative "producer partners" to plan and prepare your film programs. And, when the program and the equipment are made for each other, you gain in effectiveness, simplicity, reliability, and, above all, you save money. It's a new idea and it took Viewlex to make it work.

Whatever your need—sales presentation, training program, P.R. program . . . motion picture, filmstrip, slides, tape, cassettes, records—whatever the size of your audience . . . one to one thousand—you can buy the whole or any part of the Viewlex package to fit.

Free booklet tells all. Write or phone Stephen Greene 616-589-6600 . . . or use the Reader Service Card for your copy of 'We Do It All.' It's free. It's from the new Industrial Sales Division of Viewlex. Need we say more?

Scott Paper's TV

Campaign for Viva

Paper company takes TV into the field in 30,000 mile campaign for new paper towel.

Scott Paper Company's introduction of Viva paper towels a few years ago provides a good look at a classic example of how videotape recording enabled the company to provide quick product information market by market perfectly tailored to the sales situation in the field.

Scott's Packaged Products Division, once the original Scott Paper Company, deals in familiar household paper products such as bathroom and facial tissues, towels, napkins, diapers, industrial wipers and institutional paper products. A major profit center of the Philadelphia-based company, Packaged Products has expanded the use of videotape recording throughout

its field plants since it purchased its first system in 1966.

Although videotape recording at Scott began in a logical and usual way, as a training tool in sales and marketing, the company's first Ampex system soon found itself a part of a "travelling road show" featuring home office executives and field sales personnel in a product demonstration tape starring Scott's Viva towels.

It was a case of taking sales and training out of the home office to the field salesmen who were handling the nationwide introduction of Viva at supermarkets and other retail outlets over an extended period.

"There's no question that the first

Ampex VR-6000 videotape recorder travelled over 30,000 miles in the Viva rollout," says Howie Grant, former Scott sales manager in New York, turned training supervisor of the Packaged Products Division.

"We hauled that system in specially constructed crates to absorb the shock of truck, van and air travel," Grant recalls. "Until we got to each market, our sales people had not seen the Viva towel."

Grant took the magnetic recording system into a local store in each area and taped a locally-known Scott salesman making the detailed introduction of Viva to the store manager. Other salesmen viewing the tapes saw someone they recognized in a familiar sales situation and the introduction the division had devised for the new towel rollout.

"Moving our system into stores and taping was a tremendous advantage over having our people visit the field or having our sales people come to Philadelphia for lengthy and time-consuming indoctrination," Grant insists.

"The 12 to 18-minute tapes were far better than a 'cold call sale,'" Grant feels.

In all, the Viva rollout covered fourteen major markets in such cities as Philadelphia, Boston, New York, Atlanta, Houston, Dallas, Seattle, Chicago and Charleston.

"As far as the men were concerned, they were seeing real people and a live presentation on how to introduce Viva to a store manager for the first time," Grant recalls. "We were able to do it all, on one tape in each area."

Once the market penetration had been successfully achieved, Grant used videotape again in an entirely new way for his division. The company had to increase the manufacture of Viva towels in new production lines at its five manufacturing plants to meet its sales demand.

"We called on videotape recording to train crews in the operation of new machines and manufacturing procedures. Many techniques of preparing products had become so intricate that we prepared training tapes and shipped them to our plants around the country."

By this time Packaged Products had expanded its systems around the country. Today, there are nine Ampex systems and eleven playback recording units—each with Ampex interchangeability throughout the Division's plants.

"We found that the demand for videotape recording was increased significantly by the Viva project," Grant says.

Scott's sales presentations include these demonstrations of paper product quality. Here Howie Grant focuses in on the hands demonstrating the toughness of the towel. Grant has traveled more than 30,000 miles with portable videotape system.

though the Division's tapes are now
ly manufacturing, marketing and
ing oriented, and usually present
nsumer and her reaction to Scott's
r products, sales calls at retail
s or product demonstrations,
nt and assistant training super-
r, Tom Radtke, are encouraging
riety of tapes from other plant
s.

ared tapes that show how to dis-
the company's paper products on
rmarket shelves are essential to
t Paper's sales team. Tapes can be
ed back on location or sent to the
e office in Philadelphia for class-
h type sessions.

does the housewife think about
she shops for paper towels? Tap-
housewife panel discussions for its
force provides valuable feedback.

Our Everett plant does a lot of
y tapes and orientation tapes for
employees," Radtke says.
We find too that taped interviews
company officers speaking to
loyees are particularly well re-
d. Videotape allows us to associ-
ates with names that employees
r, and the 'face-to-face' meeting
videotape is considerably better
a memo.

Of course, videotape permits edit-
nd rapid updating—so employees
continually be made aware of new
and present successes. That's
knowledge to employees," Radtke

though Grant and Radtke are vir-
non-professional tape producers,
ie has attended the Ampex Video

Institute in suburban Chicago and the
Indiana Audio Visual Institute), both
men bring sympathetic and valuable
experience to manufacturing training
after years in Scott field sales.

"Since 1966, videotape has allowed
us to shorten lengthy training pro-
grams, present consistent programs
and introduce a realistic sales picture
of the marketplace to new salesmen,"
Grant relates.

Expanding the training function of
magnetic recording to coordinating
field sales and manufacturing was a
logical step in using "instant replay"
to further communications.

Packaged Products' use of videotape

recording in the Viva rollout has cre-
ated interest among other Scott divi-
sions, including its Education Division,
S. D. Warren Company division, Scott
Graphics, a Scott subsidiary, Foam
Division and the Brown Jordan Com-
pany, also a Scott subsidiary. Scott has
international operations in 15 of the
fastest growing nations in the free
world, Canada, Latin America, Europe
and the Pacific Basin of Asia.

The success of the Packaged Prod-
ucts Division with videotape suggests
instant replay by Scott's other divi-
sions may continue to evolve as an-
other helpful way to further company
communications. □

The Perfect Audio Visual System.

The RCS AV set™ and AV cassette™

The RCS AV Cassette combines both Super
8mm color film and magnetic sound tape
together in a single, pocket-size cassette—a
fully automatic three ounce package with
program capacity of up to 4000 pictures and
as much as 30 minutes of synchronized
sound. For expanded use with teaching ma-
chines or remote devices, the AV Cassette
can be preprogrammed to stop as many
times as you want at any point in the pro-
gram. The "endless loop" cartridge format
makes rewinding of programs unnecessary

—so that finished programs are automatically
ready for replay. All this for the cost of an
audio cassette and as little as 10¢ worth of
film!

The RCS AV Set plays at variable picture
speeds from single frame through animation.
It has both front and rear screen projection
capability. Completely portable at only 15
lbs., it is the most flexible AV cartridge/
cassette system available today—and at a
price that everyone can afford

The perfect system.

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Projector Cartridge

AUDISCAN INC. has introduced a new "long play" Synchro-Lock cartridge for use with all Audiscan projectors. Holds up to 350 frames of 16mm filmstrip and

35 minutes of 1/4" audio tape. Synchro-Lock feature prevents film from getting out of sync with tape. P.O. Box 1456, Bellevue, Wash. 68009.

Projection Screen

DA-LITE SCREEN CO. has announced a new "Classic" model screen which comes in four sizes from 40" square to

70" square beaded or matte surface. Wood grained vinyl decor on hexagon metal case. Warsaw, Ind. 46580.

Super 16mm Camera

ECIAIR CORPORATION has available NPR cameras factory-modified for Super-16 use. Modification supports a sharper and richer 35mm blow-up, 1:1.66 ratio. 73 South Central Ave., Valley Stream, N.Y. 11580.

Film Processor

TREISE ENGINEERING'S new Miniflex Processor will handle 14 different developing processes: b/w, color reversal, neg, old chemistry, or the newest soups. Universal unit prevents being "locked-in" by processor to a particular chemistry. 1941 First St., San Fernando, Ca. 91340.

Lab Services

CONSOLIDATED FILM INDUSTRIES now offers 16mm to 35mm blow-ups with full color correction in the blow-up. CFI, working with Producers Service Corp. received the Academy Award for the new fully-automated blow-up printer.

959 Seward St., Hollywood, Ca. 90029

Video Cassette Recorder

PHILIPS BROADCAST EQUIPMENT CORP. demonstrated a new Norfo color VCR video cassette recorder playback machine at the NAB convention.

NORELCO VCR

Uses 1/2" mag tape contained in portable back-sized cassette. 50-minutes running time. One Philips Parkway, Montvale, N.J. 07645.

Free Lube Job

If you use cartridge-load or continuous-loop projectors, you know that film friction can be a real show stopper.

The solution is NO-EN® lubricating treatment. It keeps film from sticking in the projector or cinching in the cartridge. It removes burrs caused by slitting or processing, and keeps film flexible longer.

See for yourself, free.

This ad is worth 800 feet of NO-EN treatment on your next print order. (And if your next job calls for more than a lube job, don't worry. We're AV specialists in all phases of 8mm, Super 8 and 16mm film printing, processing and handling. Right down to loading any brand of cartridge.) So send it to us—one free coupon per customer, of course. Good through the end of 1972.

TV Equipment

AUDIOTRONICS CORP. has introduced a new remote-controllable color video tape recorder in the EIAJ 1/2" standard. Features electronic editing and slow motion, audio dubbing. 7428 Bellare Ave., North Hollywood, Ca. 91605.

Camera Lens

PHILLARD INC. is now marketing a new version of the Vario-Switar POE 16mm-100mm zoom lens that will shoot

at ASA 400. Lens is built exclusively for Bolex H-16 and EBM models. 1900 Lower Road, Linden, N.J. 07036.

CENTURY PRECISION CINE/OPTICS has a new super-wide 3.5mm f1.8 lens for 16mm cameras. Covers an entire room, but is not a "fish-eye." No vignetting. "C" or Bolex RX mounts. 10661 Burbank Blvd., North Hollywood, Ca. 91601.

HERVIC CORP. has available an Angenieux 9.5-57 mm f1.6 zoom lens in C-mount for Beaulieu cameras. Lens weighs 29 oz. Small size and extreme wide angle offer advantages for documentary shooting. 14225 Ventura Blvd., Sherman Oaks, Ca. 91403.

Cassette Duplicator

DATA INSTRUMENTS has announced a new low-cost automatic cassette duplicator which turns out one 30-minute cassette each two minutes from input to output hopper. 16611 Roscoe Place, Sepulveda, Ca. 91343.

Pulse Programmer

POLACOAT INC. has introduced a new 3-channel programmer, the Tri-Sync, from Intermedia Systems. \$300 unit controls 3 separate projectors either manually or by digital pulses on one track of stereo tape. 9756 Conklin Rd., Cincinnati, Ohio 45242.

Random Access Projector

MAST DEVELOPMENT CORP. has a new capacity multiplier for random access projectors. Using super slides divided into quadrants, the projector has four lenses mounted into one barrel, permitting up to 320 visuals to be stored in one "Carousel" size tray. Model 138-10 Quad lens assembly fits both Mast and Kodak random access projectors. 2212 E. 12th St., Davenport, Iowa 52803.

Power Source

FRIZZOLINI ELECTRONICS has developed a new DC Ni-Cad Power Pack, Model 800NC, for running 28-volt camera motors. Supplies 250 watts at 30 volts DC for 30 minutes before recharging. Weighs 10 lbs. 7 Valley St., Hawthorne, N.J. 07506.

MUSIC

Major Records
SINCE 1947

MUSIC LIBRARY

HELP WANTED

FACULTY OPENING: SPECIALIST TV/FILM in **FILM MAKING/TV DEPARTMENT** in leading upper New York State University. Should have had several years teaching basic film courses and ability to apply television techniques in teaching film making besides a good knowledge of CCTV technical operation. A college degree is required. Position open September 1972. Faculty rank and salary are open. This position offers the right individual a challenge in a growing film/tv department. Telephone (716-464-2720) or write Prof. William S. Shoemaker, Director, School of Photographic Arts and Sciences, Rochester Institute of Technology, One Lomb Memorial Drive, Rochester, New York 14623.

The Institute is an equal opportunity employer.

SERVICES

Finest quality 35MM color slide duplicates from your 35MM master transparencies. 1/2" or more of a new 11¢ each. Boxed in sets of small additions not of desired. Over 17 years in business. Fast service. Write, World In Color Productions, Box 392 BS, Elmira, N.Y.

the screen executive

Ellis A. Cohen has been appointed Advertising Director of The Camera Mart, New York. He was formerly Public Relations Director of the Baltimore Jewish Community Center, and Production Manager of Lawrence Becker Ad Agency. Mrs. Patricia M.

KREIMAN

MRS. BRUCH

Bruch has been elected to the Board of Directors of Capital Film Labs, Washington and Miami. . . Robert T. Kreiman has been elected President of De Luxe General motion picture laboratories, Hollywood. He succeeds G. Carleton Hunt, who is now Chairman. Kreiman was formerly VP-GM of Technicolor's Commercial and Educational Division.

Robert H. "Red" Sutherland, well-remembered in the audio-visual world as the originator and supervisor of American Airlines' notable series of travel films, died of a coronary attack in New York on June 6.

His career encompassed work as a reporter and writer for the Boston Transcript and Newsweek Magazine; public relations writing for American Airlines, Pan American World Airways, and Hill & Knowlton; and independent script writing of such award-winning films as the Budd Company's *Plane Mate*.

One of his innovations in the American Airlines' series was the trilogy of five-minute almost narration-less destination films combined into groups of three for non-theatrical use, but capable of being spotted individually for TV. The films, which were among the most popular and successful sponsored travel pictures ever made, were produced by such outstanding filmmakers as Larry Madison, John Peckham and Sidney Stiber, but Red Sutherland's sure hand was felt in each one.

Red was a good friend of Business Screen for many years. We, and his many other friends in the film world, will not soon forget him.

**I TALKED
FOR TWO HOURS.
BUT THEY
STILL DIDN'T
UNDERSTAND.**

Because of poor communications?

Here's a multilinguist that will help you bridge any communications gap. The Mastermatic II® 35mm filmstrip projector. It talks with a professional voice to your audience in their language while it automatically flicks through up to 200 frames of visual material.

The Mastermatic II projector lets you change the audio track in a wink while you retain the visual portion. So you can make your presentation to your local personnel using the track that speaks in their buzzwords. And when the people from your foreign office come calling, snap in the audio track that speaks in their native tongue.

The key to this flexibility is the snap-in Unipak™ cartridge that holds the filmstrip. And the interchangeable audio subcartridge that holds up to 15 minutes of high fidelity sound—or 30 minutes at 1 7/8 IPS—on a continuous loop. You can update the audio track without touching the filmstrip. So audio tape and filmstrip should last indefinitely. Both will remain in perfect synchronization no matter how often you interrupt your presentation for audience response. And you can hold any frame for as long as you like without damage to the film.

A dual purpose projector is wrapped up in the Mastermatic II's portable, lightweight, slimline case. You can project the image on a self-contained 100-sq. in. screen. Or change over in less than a minute to conventional large-screen projection. The quality 35mm format and bright 500-watt lamp provide a sharpness and clarity of image that 16mm or super 8mm cannot equal. Whether you're making your presentation in a large auditorium. Or in a brightly lighted office.

For full details on how to enlighten and motivate your audience in any language, fill out and return coupon to
Optisonics, A Division of Elco Corporation
1758 West Grant Road
Grant Industrial Center
Tucson, Arizona 85705

- ☐ Please send literature on the Mastermatic II 35mm projector.
☐ I'd like a demonstration. Please have your representative call.

A HARCOURT BRACE JOVANOVIĆ PUBLICATION

20 million viewers for \$1600

Yes, 8¢ a thousand.

Actual circulation figures from our files.

You can match them, with a "press release on film." A minute less of 16mm-sound footage, plus printed script, that you give away selected stations.

Important: Hire Modern to send your clips to the stations. We know the right people, the right stations. They know us, and recognize that our distinctive package contains quality material. Result: High acceptance rate. We send you a report on which stations used your film and how many people saw it.

We used to call this service Modern TV Newsfilm, but we've renamed it Modern TV Spots. Reason: We've found a much wider opportunity for you. A news angle is fine, but stations will use seasonal material, public service announcements, fillers of many types. Our experience — and surveys — show that they welcome clips on environment, business (this gets a high rating, in fact), women, youth, sports, other subjects.

What else do you need to know? **Ask Modern.**

MAURER...ISN'T JUST A MEMORY

Just because we haven't built professional cinecameras for over 20 years doesn't mean that we have forgotten how. ■ We have in fact been designing and building even more sophisticated cameras to meet requirements that are—quite literally—out of this world. ■ Cameras for NASA for example. Our cameras and photographic systems have been used on every GEMINI and APOLLO manned space flight, where they have been filming in outer space and on the moon surface—quite often by remote control. ■ And under conditions where size and weight and ruggedness and absolute reliability and consistently accurate performance under the most harassing of environmental conditions, were merely the starting points of our designs. ■ In consequence we have not only kept abreast of all advancements in contemporary camera design; we have been leading them. ■ We are proud of our achievement. And are equally proud to introduce our new MAURER PRO 16 professional Camera. Designed with equal care for use on earth.

The MAURER PRO 16 is a professional cinecamera with all the ruggedness, reliability and accuracy of a space camera. It is lightweight, handles easily and is suitable for use in tropical or arctic conditions; rain, hail or blizzard. It has detachable quickly fitted 400 ft. magazines with self-forming loops. (No threading or loop-checking necessary). It is driven by a single brushless electronically controlled D.C. motor, crystal synchronized. It can be operated in single frame, or from 8 to 96 f.p.s. It is designed to run in silence, so that no blimping is necessary. It has built-in bloop, and clapper signals, and a 60Hz sync. It may be used cordless. It has a 360° rotatable eyepiece with constantly erect image, reflex viewing through a rotating mirror shutter, and interchangeable groundglasses and aperture plates for normal or "Super 16" frames. Or for TV. It has semi-automatic exposure control, 25 to 1000 ASA. Correct indication whether camera is still or running. The meter, together with a "running" light, and end-of-film warning, are visible in the viewfinder. Designed to take all commonly used Zoom and fixed focus lenses, with suitable adaptors; and for Single System Sound. Provided with external quickly rechargeable batteries with 2000 ft. capacity in belt mounted carrier. ■ The MAURER PRO 16 camera will be on display at SMPTE, Los Angeles, Calif. ■ For further details, write to: Mr. Roger Lee, Manager, Commercial Division, J. A. Maurer, Inc., 33-14 47th Avenue, Long Island City, N.Y. 11101. Telephone (212) 937-8800 TWX 710 582 2995

MAURER
PRO 16

Now the best-known name in videotape is in videocassettes.

It's easy to recognize the benefits of videocassettes as an audiovisual tool. The handling ease. The added protection for your program material.

It's also easy to anticipate some possible problems. What about compatibility between different brands of cassettes and equipment? What about the quality of picture and sound?

We can help answer both questions.

First, "Scotch" Brand Videocassettes are

compatible with all $\frac{3}{4}$ " U-matic videocassette equipment available at this writing.

Second, we've provided our videocassettes with our most advanced videotape,

"Scotch" High Energy. High Energy's remarkable magnetic properties were engineered specifically for recording at slower cassette speeds. It can provide you with color masters and duplicates every bit as good as reel-to-reel helical tape. Perhaps even better.

As the pioneer in videotape, 3M has long set the standards of quality. Today, we're setting those same standards in videocassettes.

For facts about today's videocassettes write Market Services, Magnetic Products Division, 3M Center, St. Paul, Minn. 55101.

A black and white photograph showing a pair of hands holding a Scotch UC30 High Energy Color Videocassette tape. The hands are positioned to show the front of the tape, which is partially inserted into a VHS-style cassette housing. The tape's label is clearly visible, showing the text "Scotch UC30" and "HIGH ENERGY COLOR VIDEOCASSETTE". The background is dark, making the hands and the tape stand out.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services —RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

May we make a simple desk-top demonstration

of our simple new desk-top demonstrator?

Projection scenes simulated.

It's always made sense to use film where you can't or don't want to make a live demonstration. Super 8 promised you color movies in a compact, simple package. Now Kodak lets you take delivery on that promise with the new KODAK SUPERMATIC 60 Sound Projector.

Bring the KODAK SUPERMATIC 60 Sound Projector into an office. Flip up its built-in screen. Drop in a cartridge. Position the image with the projection mirror. Touch lever. That's all.

You're showing your story in full color. With magnetic sound. On a bright, sharp, small screen. With the room lights on.

Need to show your film to a larger group? Simply flip down the built-in screen. Reposition your image onto a room-size screen with a touch of the projection mirror. You're ready again. Immediately.

One lever runs the projector. You're in command for instant replays." Or rewind and reshow from the beginning. In seconds.

You'll appreciate the table-hugging, wood-grained, low-profile styling and portable, self-contained design. Professionally produced super 8 selling and training films fit easily into your budget. And of course, since the KODAK SUPERMATIC 60 Sound Projector is designed to use the KODAK Projection Cartridge, it will accept any super 8 film—including films that you shoot yourself.

Take delivery now on the promise of super 8. Let us

tell you all the facts. About convenience. Simplicity. And economy.

Call your nearest dealer who carries Kodak professional audiovisual products. He's in the Yellow Pages under "Audiovisual Equipment and Supplies." Or mail the coupon.

KODAK SUPERMATIC 60 Sound Projector.
Puts the promise of super 8 to work for you—today.

I'd like to find out more about the promise of super 8. Please:

- ☐ Have a dealer contact me to arrange my own desk-top demonstration of the KODAK SUPERMATIC 60 Sound Projector.
- ☐ Send me more information.

It's NO SECRET!

FAIRCHILD
Seventy **07**

'Agent'

...it sells for you right out in the open

New lightweight,
portable cartridge-loading
super 8mm, sound
motion picture projector

ALL THIS PLUS FAIRCHILD ENGINEERING

The SEVENTY-07 is the projector for the man on the go! It travels as easy as your attache case and is always ready to help you sell, teach or train.

IT'S PORTABLE, set to go where and when it's needed. When you fly, just put it under your airplane seat.
It only weighs 17 lbs.

IT'S VERSATILE... the **SEVENTY-07** converts from rear screen to front projection in a few

seconds. It's ideal for either a small group or a large audience.

IT'S CARTRIDGE LOADED ready for action. You never have to thread or rewind your film with the **SEVENTY-07** and **MOVIEPAK** cartridge.

IT'S EASY TO OPERATE... sets up in seconds. Simple, accessible front controls make the **SEVENTY-07** a cinch to operate. The MoviePak cartridge is carried in place, all ready to show.

NO MATTER WHAT YOUR NEEDS ARE IN FILMED PRESENTATIONS, FAIRCHILD HAS A SUPER 8MM SOUND PROJECTOR TO MEET THEM.

NEED HELP to show your products or services? Let Fairchild expertise aid you in solving any sales presentation problem.

an Cable Television erve Community Interests?

ten-week experiment designed to explore the mutual interests of programmers, cable systems and subscribers is conducted this spring in a suburban New Jersey community. Involved are Modern Video Programming, a division of Modern Talking Picture Service; Micro-Cable Communications Corporation, which serves the Wayne, N.J., area; and various local educators, religious leaders and others interested in the needs of the community's specialized audiences.

Results of the experiment indicate that the three interested parties could effectively work together cooperatively to furnish materials geared to the community's educational and avocational interests. It was also established that the community's special strength would not be in delivering a mass audience but in appealing to segments of subscribers with material finely tuned to their needs that most TV broadcasters cannot afford to provide.

The experiment clearly established that business-sponsored films and educational subjects are adaptable to cable programming. Other points which were brought out were that:

A variety of formats were useful and acceptable for programming, from videotape to motion picture film to filmstrips.

Planned repetition of program material, rather than a drawback, is an asset in both terms of budget and viewer convenience.

Cable may provide a valuable extension of the classroom with out-of-school viewing of supplementary films designed in the same way that outside viewing is assigned.

Cable can provide for a wide variety of special interests, including adult education and self-improvement.

There is need to educate many segments of the local communities about the potential of cable and they must be encouraged to have a strong voice in program selection and scheduling. Many film producers and distributors should be more aware of the needs and potential of cable broadcasting and be aware of clearances required for CATV.

The films used in the experiment were selected from Modern's library of free films and from a number of educational film companies who permitted the use of their material without charge.

Complimentary copies of the report are available to sponsors and producers of industrial films from Fontaine Kincheloe, Jr., Modern Media Services, 1212 Avenue of the Americas, New York, N.Y. 10036.

Dr. Robert Richter, Film Pioneer, Mourned

Dr. Robert Richter, managing partner of Arnold & Richter KG, died on June 18, 1972 in Munich, West Germany after a long illness.

The 73-year-old film pioneer was co-founder, together with his life-long friend and associate, Dr. August Arnold, of the firm of Arnold & Richter KG, in Munich, which is today a leading manufacturer of professional motion picture equipment. Among the company's many products are the world famous Arriflex cameras.

Dr. Robert Richter

Although a graduate of the Munich Institute of Technology, Dr. Richter's expertise in the motion picture equipment field was largely self-taught since he was among the first to turn his attention to the then fledgling industry when he and his school-mate August Arnold established their company in 1917. Originally conceived as a part-time motion picture laboratory, Arnold & Richter grew rapidly and expanded into the manufacture of developing machines, film printers, and affiliated equipment.

In 1925 Robert Richter traveled to the United States, where motion picture technology was advancing at a

faster pace than in his native Germany. Supporting himself by working as a waiter, machinist, and locksmith, he made his way to Hollywood to work in many areas of film production, including cameraman for Universal films.

Completing what he considered to be an apprenticeship, he returned to Germany to resume his formal education, in the process of which he earned his doctorate.

In 1936 Arnold & Richter introduced the Arriflex 35, a revolutionary camera based on their invention of a rotating mirror shutter, now standard in many professional motion picture cameras. The camera was the first of a long series of 16 and 35 millimeter Arriflexes, which today are the most widely used tools of the film and television industries.

Dr. Richter personally received many international awards. In the United States he received honorary memberships in the American Society of Cinematographers and the Society of Motion Picture and Television Engineers.

Two Industrial Television Groups Scheduled to Merge

Preliminary arrangements have been made to merge the National Industrial Television Association and the Industrial Television Society.

Both groups have had similar activities and aims, and it has been felt that a merger would result in a much stronger organization which will incorporate the strong points of each.

According to present plans, the two groups, each with approximately 250 members, will join together early in 1973. A joint merger committee is now working on a new constitution, bylaws and organization.

A national conference of the new organization will take place on March 28-30 in Washington at the Shoreham Hotel in coordination with the equipment exhibition of the National Association of Broadcasters.

Neither NITA President Ed Palmer (New England Telephone & Telegraph Co., Boston), nor ITS President Joe Gorman (Moore Business Forms, Inc., Niagara Falls, N.Y.) anticipate any problems in consummating the merger. Gorman said, "It has been long needed and now is the most opportune time for it." Palmer pointed out that, "The two organizations have

Private Enterprise Needs to Show the "Big Picture" Today

In this year of "negativism" amid vitriolic attacks on nearly all segments of private enterprise; Naderism and its shrill outcries, often based on the "when did you stop beating your wife?" principle; and the confusion cast among young Americans, industry can well be concerned with *the quality of its public image*.

Where does the responsibility of today's corporate audio-visual manager fall? Filling orders from every level of management for nearly every kind of everyday A-V tool is his principal preoccupation. Perhaps that is sufficient, perhaps not.

There is, it appears, two wholly different approaches being taken by companies when public and employee relations come to the realization that a really effective, memorable motion picture can help improve both external and internal understandings of vital objectives.

There is the approach of companies like IBM World Trade, etc. where the answer to corporate problem in which *a good film* can help, is to turn to truly-qualified professional talents for its production.

And there is the approach of the *do-it-all-ourselves* corporate department where such films are attempted and are occasionally successful, *often less so*.

There's really a *third* approach, where large companies like General Electric at Schenectady, have enough savvy and experience to bring off good public relations' film production.

We've raised a very important question which only the most dedicated audio-visual man or public relations' director can answer. But take a leaf from Philips, the Netherlands' electronics giant, where management has always turned to the most creative talent available in that land. Borrow one of the U.S. prints of *Light*, the recent Grand Prix winner at Barcelona and see what true genius in film making is capable of doing.

In any case, with national and international film distributors capable of delivering millionfold audiences of influential Americans for *that kind of* truly appealing film and with the corporate need for the widest possible

public understanding, *this is no time for experimentation*.

The man who will go into top management out of today's important job in audio-visual communications may be the man with courage to say: *"let's go out and find the finest talent available to make that picture!"*

He won't kid himself or his company into believing that homemade videotapes are going to do the job; he'll try to acquire the talent of a Bert Haanstra or a Lee Bobker, to name just two of *dozens of proven producers*.

Think small and stay down. Henry Ford put Leo Beebe into the ranks of his top managers because this IAVA past-president saw the broad picture. And we think of all this because we're seeing all too few of such films as *Miracle in Paradise Valley, Louisiana Story* and those other great sponsored films of past years which have become "classics" in our time. *And they did the job*.

It costs just a penny or two per viewer to make *the big picture*; that's not an expense, it's an *investment*. Your company owns a valuable property and it has gained a goal vital to all of us who believe in the system that made America great.

Great enough to be emulated in nearly every land; to be the envy of China and the Soviet Union as well as all of Europe. Great enough to furnish the food and fiber on which an entire world depends, as well as building a society that, despite its shortcomings, continues to grow toward the 80 million employment mark.

Some Important Names Overlooked in Recent IAVA Meeting Report

Editorial deadlines being what they are, our most recent Camera Eye report on Industrial Audio-Visual Association activities during that organization's annual Spring Meeting in Tan-Tar-A in the Missouri Ozarks left out some pretty important details.

For example, former IAVA Secretary Dick Joy (Burroughs Corp.) was elected 2nd Vice-President; Paul Anderson (Northwest Bell Telephone Co.) is IAVA's new Assistant Secretary and the durable, exuberant Fred Woldt (Ill. Bell retiree) continues as Executive Secretary and Treasurer.

And for prospective members in the a-v management fraternity, two Membership Chairmen were named: Tor Zarbo represents Eastern prospects and Tony Sellner is the man to write to if you're a Western member prospect. West of the Mississippi that is.

And, just to set the record straight Caterpillar Tractor's man-in-charge of all Spring Meeting program arrangements was identified by us as "General Supervisor, Communications Services" at that company. 'Scuse, please, for the past two years Bob has been Assistant Manager of the Sales Training Division at Caterpillar!

For convenience, address inquiries on membership to Fred Woldt, Industrial Audio-Visual Association, P. O. Box 656, Downtown Station, Chicago, Illinois 60690 and Fred will see that your letter is forwarded to the proper chairman.

Taking the Facts to Workers

Apropos of the importance of getting truth in the most convincing, most understanding and effective ways to public and employees, Alcoa took the message of *Cost-Price Squeeze* and its implications to all of its 350,000 employees. This factual motion picture on the reasons for the closing of the company's New Kensington Works, operative for 80 years, showed Alcoa's people that modernization and employee motivation for increased productivity are the keys to their futures. The film did a great job restoring morale, increasing output and was well received by labor leaders as well as workers.

If you don't tell your people the facts, they will draw their conclusions or adopt those adverse to your company's future and theirs.

California Names Don White

Former executive vice president of the National Audio-Visual Association, Don White, now heads up the new Washington, D.C. office for the California State Department of Education. Don's title: Deputy State Superintendent for Congressional Relations. California couldn't have picked a more experienced and competent man for the job. Our life-long friend has been an education advocate in the national capitol since 1959.

Fairchild 70-07: 1424 cubic inches.

Videotronic Compact: 837 cubic inches.

Less is more.

When we say portable, we mean it. The new MPO Videotronic Compact automatic movie projector is two and a half pounds lighter than the Fairchild Seventy-07. And the Fairchild is 70% larger. The new Videotronic Compact is easier to carry. Easier to travel with. Easier to set up because it needs less space.

What's more — the Videotronic still does the best job. Just snap in a cartridge. Flip out the Videotronic's own built-in screen. Or convert, in seconds,

to project on a wall or large screen.

You'll hear improved sound quality and see a sharp, brilliant motion picture. And you'll appreciate some great new features. Like external on-off volume controls. And the unique N. T. C. (negative temperature coefficient) built into the lamp circuit, to prevent blowing the lamp in areas of excess voltage.

Make a quick comparison. We think you'll agree. With the MPO Videotronic Compact . . . less is more.

REVIEWS AND PREVIEWS OF NEW VISUALS

Problems of Illiteracy: The Right to Read

A new film released by the U.S. Office of Education illustrates the tragedy of functional illiteracy in America and demonstrates the efforts undertaken to solve reading problems.

After an introduction by Mrs. Richard Nixon, Honorary Chairman of the

National Reading Council, *The Right to Read* goes on to graphically depict the plight of illiterate adults and children throughout the country. It shows how they are being taught to read, in terms of their own needs—by their peers, interested citizens and with the aid of audio-visuals, television and computer technology.

According to Sidney P. Marland Jr., U.S. Commissioner of Education "the film pinpoints the reading crisis and shows how many of our citizens are denied employment or advancement because they cannot read simple instructions or application forms. It also shows the job of learning and achievement at all ages in warm, human terms."

The Right to Read was produced by Francis Thompson. It is available from Modern Talking Picture Service, 2323 New Hyde Park Rd., New Hyde Park, N.Y. 11040.

Self Defense for Woman

Industries and commercial establishments with large groups of women employees may find a new film on self-defense for women of particular interest.

Nobody's Victim covers two main fundamentals of personal safety: avoiding danger before it develops and dealing with it when there is no other choice.

The film shows many practical defense techniques and courses of action to take in danger situations. It is not a karate or judo film.

Interviews with women who have actually been attacked illustrate dangerous situations. It is shown how a comb, key, or rolled magazine can be more practical defense weapons than a gun.

An authoritative film, *Nobody's Victim* is based on the work of Pat H. Stock, defense expert, lecturer, instructor and author of *Personal Safety and Self-Defense for Women*, which is used by hundreds of police departments and schools as the text of their course on self-defense.

Nobody's Victim is one of the first films on personal safety for women available to the public. It was produced by Vaughn Obern and Alan Barker, and is available for sale or rent from Ramsgate Films, 704 Santa Monica Blvd., Santa Monica, California 90401.

Environment Film Seen by Millions

An Ex-Cell-O Corporation film on the environment dilemma has been seen by 13½ million viewers in its first 14 months of circulation.

The 14½-minute color movie, *The*

NOW THERE'S A PROFESSIONAL 16MM ELECTRIC AT THE PRICE OF A BOLEX.

Because it is a Bolex.

The new Bolex EBM Electric 16. With all the solid, dependable features you associate with Bolex. Plus built-in motor, and rechargeable 12-volt battery contained in the most comfortable grip you ever held in your hand. A compact, easy-to-handle, thoroughly professional 16mm camera. At a price that should put an end to rentals forever.

The motor is electronically controlled for accurate, steady running at speeds of 10 to 50 frames per second, and 24 and 25 fps for synch sound. An easily attachable 400' film magazine is also available.

The EBM has flickerless ground glass reflex viewing and focusing with 14X magnification. Plus a handy behind the lens filter

slot arrangement. And the camera incorporates the famous Bolex registration claw that assures rock-steady images.

Equipped with the Vario-Switar 16-100mm zoom lens with electric-eye through-the-lens light metering and power zoom, the EBM becomes the most automated professional camera. (NASA chose Switar lenses for use in the Apollo flights.) A dozen other top quality fixed focus and zoom lenses are available, all incorporating the bayonet type lens mount for instant lens changing and locked ring security.

Accessories for the EBM include a small, lightweight synch pulse generator that rides in a pocket. And a pocket-sized crystal control unit for wireless synch sound filming.

The Bolex EBM has everything a professional could wish for in an electric 16. At a price that sounds like wishful thinking.

BOLEX

paradox

BY STANFORD SOBEL

PARADOX: Money is the root of all good.

Recently I made the mistake of trying to clean out my old files to make room for new ones. I started out deciding I would be ruthless and throw out everything over ten years. But there was so much interesting material that I extended it, first to fifteen years and then to twenty. Finally, I cleared eight file folders out of four hundred.

In the course of doing this I became deeply disturbed by a curious coincidence. I ran across a bid specification for a script for the Navy, which was dated 1955. Looking at it, I realized that I had bid \$3,000.00 for a script assignment, which went to another writer for \$2850.00. Nothing strange about that except that. . .

. . . Just one month ago I bid on a Navy script and my bid was \$2475.00. The assignment went to a writer who bid \$2450.00! The real point of this anecdote is this . . . in 17 years my estimate of my work's value has gone down by more than \$500 on an equivalent job!

This paradox started me thinking about money, and its relevance to value, to writing, to quality in films, to return on an investment and all the rest. Money has no intrinsic value for me, nor for most other writers I know. I think that's why we're generally poor businessmen . . . with some important exceptions, of course, of whom I try to be one. For most writers, money is like millimeters. It's really only impor-

tant as a measurement. Writers think of money the way executives think of job titles. It tells you something about how far you've been able to get but it has almost nothing to do with your ideas of intrinsic value.

There are certain basic requirements, of course. If you live in the New York metropolitan area and you have a house and children and cars, you have to make \$25,000.00 a year to get by with any hope of sending your youngsters to college. Now if you think about that for a moment, it divides out to the point where you have to earn about \$100 per day in your normal occupation.

Of course, if you allow for some slow periods, then you have to earn more than that during your busy periods to compensate for the idle days. I know what all of my colleagues and competitors charge, and I've always been very frank with them in discussing my own fees. This is such a close-knit little industry that there are no real secrets, and most of us know the consequences of pricing ourselves out of the marketplace.

The other thing is that producers and clients almost never select a writer on the basis of price alone. If there is a difference in price, it's usually something like \$150 . . . to take a figure at random from my old files! Nobody becomes personally wealthy by writing industrial films. You can become wealthy by inheritance, by investment, by marriage, by employing other people, or by writing a hit Broadway musical . . . but not by writing industrial scripts.

Nobody is more defenseless in economic terms than the free lance writer in the industrial film industry. He has no union protection, no corporate defense, no paternalistic employer, no civil service protection, and he doesn't even qualify for unemployment compensation. In television he at least has the protection of the Writer's Guild Minimum Basic Agreement, but the industrial field is so fragmented that the Guild has never been too effective. You don't even have the bargaining skills of an agent because, generally speaking, they don't find the field too profitable and haven't operated much in it.

Of course, you can predict the consequences of this type of vulnerability

. . . writers have generally struck back with guile, craftiness, humor, and originality. Some of my favorite conversations and confrontations have been on the subject of writer's fees.

Once a purchasing agent type called me in furiously, even though he had already given the job to another writer. The P.A. was simply calling me in to vent his annoyance and intimidate me for the next possible assignment. When I went to see him, he blustered at me . . . "How dare you bid so high? . . . Why is your price so exorbitant?" "Because," I answered, "the profit is exorbitant." He stared at me for a moment and then burst out laughing.

Recently, one of my favorite corporations, in the first fifty of the Fortune 500, called me in to write a new film. The man asked me for a price, which was \$3,000.00, and was agreeable to it. He had just one small favor to ask. The corporation was trying to recover from a difficult year, and they wanted to look good at the annual meeting . . . (which happened to be where they were going to show the film to the stockholders.) So . . . he continued, would it be all right with me if they paid one-third of the script fee now and the rest of it six months later, in their new fiscal year?

I deliberated about this very carefully for a while. Here was a major corporation in the U.S. industrial field, asking six month deferred credit from a free lance writer whose total income for the last ten years combined was less than the annual compensation of the man making the request, (according to the annual report to the stockholders.)

Finally, I said it would be perfectly o.k. with me, but I did want to check with some other people and make sure they were agreeable to such an arrangement. If they agreed I would certainly go along. He brightened up and said "Fine! But who are they?" I thought you did a single act!" I then explained that I would have to leave a note to the milkman asking him to bill me for only one third of the money now, to the manager of the local A & P for a six-month deferral on 2 1/2 of a weekly grocery tab, the same for Blauvelt Liquor Store, Ralph's Grease, the hush Garage where I buy my gas, Wolfson who sells me my insurance, the Provident Savings & Loan wh-

Stanford Sobel writes "Paradox" in each issue of this magazine, regarding the industry from his special vantage point as a writer based in New York City.

olds the mortgage on my house, and out twenty other people. But if they bought the deal, I assured him, I'd have no objection from me! Writers aren't the only ones with this kind of problem. Dick Shanahan of Detroit is probably one of the best film producers in the business today. Recently he submitted a bid on a job and the prospective client called and asked: "Couldn't you cut your price down a little on this, Dick?" Richard's response was a classic.

"Well, the answer to your question is both yes and no. Yes, I could cut the price down, but if I did, then I wouldn't be making any money on the job. And if I were satisfied to make no money then I could stay home in my living room and not work at all. I'd make no money, so I guess the answer to your question is really no!"

When I say that "money is the root of all good", what I mean is very simple. I don't think you can get good work without paying a fair price for it. Of course, you can pay a high price for a film and get a bad picture. I see at least ten bad pictures a year which cost somebody a lot of money. And for scripts . . . every scriptwriter I know will testify that you sometimes pay a lot of money for a script and end up with a second-rate script.

But . . . if you want an absolute guarantee of bad films and second-rate scripts, the surest way to get them is to chisel on the money end when you're hiring creative people to do the job. Writers and producers want many things out of life . . . recognition, prestige, appreciation, responsibility, freedom, authority . . . all the things that everyone else wants. Money alone will not provide all those good things. In this complex industrialized society, money is a measurement by which your progress toward them can be measured. My mother says that money is a popular gift because if the people don't like it they can always change it for something else.

The only real weapon a writer has in bargaining is his refusal to accept any assignment, and that obviously has its limitations. If he employs it too often he ends up unemployed. And if he does not employ it often enough, he will defeat himself by working for less, denigrating his own work and prestige, and ultimately damaging his reputation. I consider myself among the most fortunate of men for I have been generally blessed with clients who know my work, like it, pay me fairly for it, and I continue to use me each year with increasingly mutually satisfying relationships, both financial and creative. Their money has been the root of all my good things. □

PROJECTION POSSIBILITIES FRONT, REAR, OR BOTH?

by Raymond W. Wadsworth

Rear versus front projection—which should it be? This is far and away the question most asked our staff of a/v consultants. Since front projection will not provide an effective image on a rear projection screen, and all too obviously vice versa, the answer must take into consideration such factors as the function of the room and the availability of space as well as the cost. In considering costs we are not, of course, referring to the ceiling recessed front screen that should be included in most every rear projection installation in order to accommodate the ubiquitous overhead projector—but rather to a *fully equipped permanently installed dual system*.

Usually, there are times when a client asks for both front and rear projection to play it safe because he does not want to overlook any possible need for dual-system flexibility. There are, however, other instances when the functions of rooms do indeed dictate a design that permits both front and rear projection. Until recently the design of most permanently installed dual systems have called for two sets of equipment, each requiring its own projection booth at opposite ends of the room. In attempting to discover a means not only of avoiding the cost of duplicate equipment but simplifying and centralizing the day-to-day operation of a dual system our staff created several design concepts that have offered our clients the flexibility of both front and rear projection with *one* set of equipment.

To describe the possibilities and set forth the parameters of design for such facilities, this month we call upon Senior Associate, Raymond H. Wadsworth, who sets the scene from the vantage point of a totally integrated system operation.

H W

CONSIDER THE FOLLOWING:

A button is depressed at the control console—the large window wall, which until meeting time had offered the conferees a sweeping view of the city's north shore, gradually and quietly darkens as vertical blinds close out the view. The transparent drapes close. The group takes comfortable seats with large arm rests and writing surfaces, swivels into an informal seating pattern, and gives its attention to the conference leader. The background music has tapered off unnoticed, and a pleasant change in room lighting is somehow creating a mood of expectation and awareness that the next two hours will be a meaningful experience.

A ceiling spotlight illuminates the speaker as he makes his opening remarks, and the lectern microphone picks up his voice, which reaches every listener in natural low level tones over the concealed ceiling loudspeakers.

The program moves into a rear screen presentation, requiring audience participation. Already the leader has depressed a single environment button on the lectern control panel, and what had been a wall-covering panel moves silently into the ceiling recess, revealing a rear projection screen descending from above, while a chalk board is disappearing into the same overhead recess. Simultaneously the audience area light level has increased to facilitate note-taking and discussion, and the first set of visuals to be shown on the dual-image screen await the press of the required function buttons on the lectern control panel.

At the proper time an intermission intervenes, whereupon the rear projection environmental pre-set control returns the room to its normal mode, and the participants once again enjoy a view of the outside surroundings complete with background music.

After the coffee break, an industrial film is to be shown, in full color cinemascope. But now an entirely dif-

ferent room orientation is preferable. As before, a single button is depressed at the main console, and the changing room environment bids the viewers swivel their chairs and give their attention to the opposite end of the room. It's difficult to be aware of that is taking place—for what appeared to be a wall panel is now quietly retracting into the ceiling while a chalk board behind it is just disappearing from view into an overhead recess, revealing a wide, curved front projection screen not unlike theater. At the same time, what has been the rear screen wall at the other end of the room, is undergoing some interesting changes also. The wall panel has again retracted, as has the chalk board behind it, and the rear screen itself, while a mask is descending, is rising into a ceiling recess. The mask closes the rear screen opening except for an area large enough to permit the projected light beams to pass through, and also to permit the projectionist to view the screen as part of the audience. So now we have a theater—with just the right environment to ensure distraction-free involvement of the viewers with the film.

SOUNDS FAR FETCHED AND IMPRACTICAL?

Not at all! The system described is now in the planning stages, and scheduled for use in the new management committee room complex in the extremely progressive First Wisconsin Bank in Milwaukee, Wisconsin. Fig. 1 shows a plan view of the system in rear screen mode, and Fig. 2 gives the arrangement for front screen use. A third feature is demonstrated in fig. 3, wherein a separate small screening room is created with the light beam space needed for the rear screen projection system. The projection screen for screening uses the rear side of the sliding double surfaced chalk board, which occupies the same nest of slide tracks as the rear screen and mask.

Another automated visual system involves the display of 32 different charts, displayed in a matrix of 4 charts visible at one time, using 16 horizontal rows of 8 charts each. Behind these is a second set of charts.

Hubert Wilke is president of Hubert Wilke, Inc., an international organization specializing in communications facilities design and programming consultation.

1. Plan view of av complex, in rear projection mode.

4. Room orientation shifts toward play wall, containing automated displays used during small group discussions.

aled when the front set of charts automatically transported vertically of view. Fig. 4 shows the room arrangement when the chart wall is in use. Pattern light projectors, located in the space above the suspended ceiling over the audience area, automatically light any display or map of displays "called up" by the center.

TWO-WAY PROJECTION SYSTEMS FOR UTMOST IN FLEXIBILITY

It is interesting to note some of the various arrangements used in an effort to provide the advantages of two-way projection systems. While many cannot support the cost of ultra sophistication, as in the system described above, they are starting to work in terms of more fully integrated systems, and have found that both front and rear projection can be utilized with varying degrees of cost if space is properly planned at the outset. The important thing here is the need for two way projection making itself felt as AV media practitioners expand their horizons to let the visual image and the environmental surround work together to produce the desired stimulus. In this regard, a prime consideration is that concept of "projection flexibility", and to that of "multi-use", brings a new dimension to space utilization. With this concept in mind that we have recommended that certain training rooms in the forthcoming consolidated Federal Law Enforcement

Fig. 2. System oriented for front projection.

Fig. 5. A typical 30-man classroom arranged for both front and rear projection.

ment Training Center complex to be built just outside of Washington, D.C. be equipped to alternately convert from front to rear screen. Fig. 5 shows a typical arrangement of a 30-man classroom for the above complex, with convertible projection systems. The projection equipment is not duplicated—the same projectors serve for both front and rear projection systems. All sliding panels and screens are manually operated.

Another such system is depicted in fig. 6. Here we have a system where the rear screen is flexible, light weight vinyl rather than glass. It is stretched on a transporting frame which is shown in the extended operational position (a). Rear view projectors are housed in the enclosed booth, and rear-project through glazed ports, when front projection is required, the rear screen assembly moves back on ceiling-mounted tracks, and a roll-down screen lowers for projection via a 16mm projector located at the op-

Fig. 7. A front/rear system using a roll down rear screen, with plate glass sound attenuating window.

Fig. 3. What was "light beam space" in fig. 1 becomes a separate screening room.

Fig. 6. Front/rear projection system using unique arrangement of track-mounted flexible rear screen, plus standard roll-down front screen.

posite end of the room, (b). With this arrangement the audience faces the same direction for both modes of operation.

The last example, Fig. 7 was actually the first such design in our development of dual projection facilities. It was created by our associate Edwin Hodder for Time Inc., as a straightforward and economical means of handling an unusually wide range of multi-image slide and film presentations.

At Time, Inc., the rear screen is flexible, and consequently is rolled in a concealed enclosure. A large glass window serves to attenuate the sound of the projectors, and also acts as a projection port for front projection. Equipment location is always in the fixed booth at one end of the room. Portable seating is simply reversed to orient the audience for either front or rear projection. The installation of this facility in Time/Life's New York headquarters has provided ample opportunity to study and evaluate the concepts herein described. □

Ray Wadsworth is a senior associate of Hubert Wilke, Inc., and a leading authority on audio-visual projection systems.

a-v man

Willis H. Pratt, Jr., recently retired as A.T. & T.'s Film & CCTV Manager, is Business Screen's **A-V Man** in this continuing series of profiles of leaders in the industrial audio-visual world.

If anyone should be considered to have been the chairman of the Board of the industrial audio-visual community over the past 25 years or so, it would have to be Bill Pratt, head of American Telephone & Telegraph Company's film & CCTV department. During most of these years he supervised the largest budgets for film production in American industry; most of the films he and his department turned out were models of communications efficiency and technical excellence; and he has won, during this time, the unbounded respect and affection of hundreds of his fellow A-V men in industry for his good works on behalf of audio-visuals and audio-visual people.

Bill Pratt retired on May 31 after 43 years with the Bell System. During the annual Spring Meeting of the Industrial Audio-Visual Association, fellow members presented him with a plaque in recognition of his outstanding contributions to the industry. Responding to this salutation, Pratt offered some of the "A-V-isms" to which he has dedicated his business life. His concluding point, and one of the most important, was this:

"The AV man is a communicator. As we all recognize, ways and means of communicating are constantly changing. In fact, the development of new hardware during the past few years has quickened to a point where the AV professional has difficulty in keeping up to date.

"However, he cannot afford to become so dedicated to his standard offerings and production schedule that he fails to conduct a selective process of experimentation with new hardware and software. Innovation and imagination are two keys to his suc-

cess. Without them he is indeed an order taker."

Bill Pratt has been continually looking ahead in fulfilling his company's requirements for new visual communications media during his career at A. T. & T. After supervising Bell System films for over 20 years, he early became aware of the growing possibilities for the use of closed-circuit television in the system, and about five years ago he was selected to direct the growth of CCTV throughout the Bell System and to head up A. T. & T.'s new CCTV department in the New York headquarters, a job to which he proceeded to devote himself with all the energy and skill he had given to film supervision.

Willis Pratt came to audio-visuals as a young man in a gradual manner over a period of years. In college, at the University of Connecticut, he was active in writing for the college newspaper, and took part in theatre activities as stage lighting manager, but after joining Ma Bell his career led him into the electronics side and gradually into training, both at the craftsman and management level.

Shortly after the conclusion of World War II, business became increasingly interested in the new visual media which had done such an excellent job in military training, and the Bell System began an evaluation of sound slidefilms for specific job training in the plant department. Pratt, then with the Southern New England Company, took part in this evaluation by writing a proposed script for a slidefilm on the problems of the new man on the job.

The film was produced, proved successful, and attracted the attention of John Shaw, then Asst. V.P., and just given the job of organizing the audio-visual part of the Bell System's operations. Mr. Shaw invited Pratt to New York, and shortly after this, Bill began his full-time audio-visual career as A. T. & T.'s Film Manager.

It has been a particularly satisfying life for Bill Pratt. "There is endless variety," he said recently, "endless challenge and opportunity for imagination and innovation."

Pratt has been a constant innovator, not only in the extremely wide range of applications to which Bell System films were put, under his supervision, but in the meticulous care in which they were aimed at particular audiences and tested to prove their aim was true.

In addition to the Industrial Audio-Visual Association, in which he has been active for a great many years, Bill Pratt was a charter member of the Council of International Non-theatrical Events (CINE), serving on

its Board of Directors, as Chairman of its Business and Industry judging committee for many years, and as President for a two year term. He has served on the Audio-Visual Service Committee of the Association of National Advertisers for many years, and as Chairman for five years.

Anthony C. Lunt, Administrative Secretary of the ANA A-V Committee, still remembers Pratt's time as Chairman with considerable affection. "Guys like Bill Pratt," he says, "emphasize the adage that if you really want something done, give it to a busy man. It must be that the increasing burden of responsibility and the demands of multifarious activities can call up latent reserves of creativity and energy in a man like Bill. I remember a particular time when, with all his activities in full swing, Bill took a great deal of time and effort to create a very funny tape recording to commemorate the retirement of ANA's senior vice president, Duke McElroy. Duke was not only pleased and honored, but simply amazed that Bill could manage the time to plan, write and record the tape—much less one with such professional content and timing. I guess an accolade of 'professional' sums up what it is that makes a man like Bill Pratt able to do so much, so well. It's the highest order of compliance in my book and one that Bill Pratt has earned many times over. It's a kind of talent that makes outstanding plays by Gordie Howe, Willie Mays and John Unitas look easy."

Bill Pratt has retired from the Bell System, but has not lost his keen interest in audio-visuals. He plans to continue his active assignments with CINE and IAVA.

Recently he was asked, in view of the experience gained during his long service to the industry, what he has in the future for the industrial A-V man.

"I think the audio-visual man has a very meaningful future, and I can only see his status as growing. The basis, however, that the A-V man is, as he should be, a well-rounded individual who has in his kit bag of communications tools all the necessary media.

"However, if he is only specialized in one type of medium to the exclusion of all others, then his future may be very bad, indeed. He is not serving his company as he should. He is not helping to shape his own future, he is a victim of it.

"But, if the A-V man recognizes all the requirements of his job, goes ahead to meet the needs of his company, then I think he has a bright future."

When you
concentrate
on doing
something well...
and spend
4 years at it...
you're likely to
do it very well
indeed.

and we do!

No other lab in the world knows as much about processing filmstrips and color slide duplicates as Frank Holmes Laboratories.

This isn't idle bragging.

It's a fact. Ever since we started in 1948, we have specialized in turning out the finest quality color filmstrips and slides. They're not a "side line" with us. They're our only business.

Along the way, we've run into a great many problems, and solved them.

We've learned a lot about short cuts — which ones to take and which to avoid.

We've experimented with many techniques and created a few new ones ourselves.

Much of the equipment at Frank Holmes Laboratories is unique and has no counterpart elsewhere in the industry. Nowhere else is there such an exacting inspection procedure . . . or such an outstanding enthusiasm for perfection.

Which means simply this . . .

If you want the finest quality color filmstrips or color slide duplicates, why not select a specialist, like Frank Holmes Laboratories . . . the lab that does them better than anyone else in the world!

Write today for our new free catalog!

Multimedia Is Key Sales Program Tool For Wichita Ad Agency

Don Forbes, president of Forbes, Inc., Advertising of Wichita, Kansas, was once a professional photographer.

Is multimedia a viable communications tool that should be used by every marketing organization—or is it a here-today, gone-tomorrow gimmick?

When asked this question, Donald G. Forbes, president of Forbes, Inc., Advertising of Wichita, Kansas, replied:

"Shortly after we opened our multimedia theatre, we produced a four-projector, 15-minute presentation to describe a syndicated merchandising package that we developed for sale to banks. Within several months, we showed the program to 23 prospects—22 are now customers."

Forbes emphasizes that he doesn't give multimedia full credit for closing these sales. He believes the viability

of the package, Chequers Clubs, Ltd., which is designed to attract youthful customers to banks, is what made it salable.

He explains, however, that the availability of the multimedia theatre and program on-premises helped to attract the prospects. In addition, the presentation itself gave potential clients enough information so the agency could close the sale.

"There is no way that we could have been nearly as effective relying solely on flip-charts, literature and personality," he stresses.

Forbes, who founded the agency in 1963 to provide advertising and marketing services on a regional and national basis, developed his firm's multimedia capability to the point of de-

signing an in-house theatre.

"I first became impressed with the marketing potential of multimedia in 1967 when I attended the world's fair at Montreal," he says. "Multimedia programs were easily the hits of the fair. I saw people waiting in lines for hours just to see a multimedia show, and I concluded: that's the way to involve viewers with a customer's product or services."

Forbes was well-qualified to understand the potential of the medium and do something with it. His first job was as a reporter-photographer for the *Kansas City Star*. He became such a proficient photographer that he opened a commercial studio in Wichita; later, he made the transition to radio and television and, ultimately,

Don Forbes uses the multimedia theatre to present an ad campaign to his staff. Room is adaptable for many purposes.

With the motorized screen in position, the presentation room becomes a multimedia theatre.

vertising.

His first probe into multimedia occurred in June, 1967, when the company's newsletter, "Inside Forbes," described how three Kodak Carousel projectors were used with synchronized, recorded sound to make a short sales presentation. The idea flowered, and the agency—which provides advertising and marketing services for 10 banks, Seven-Up, several divisions of the Sun Oil Company, a number of Kentucky Fried Chicken franchises, and others—gradually created in-house capability for slide production and sound recording.

The big breakthrough came in 1970 when Forbes moved into its own 6000-square-foot building (it leases an adjoining 2000-square-foot facility) on the outskirts of Wichita.

Forbes credits the Wichita-headquartered architects, Schaefer, Schirer & Elfin Associates, for the non-commercial atmosphere of the structure, which the Kansas Chapter of the American Institute of Architects named one of the three best-designed buildings in the state in 1970. However, Forbes reserves credit for the design of the multimedia theatre and audiovisual system for himself and his staff.

"The architects had ideas about that, too, but we knew what we wanted," he notes.

What Forbes wanted was a comfortable theatre where customers could be enveloped in an audiovisual environment.

"For this type of medium to be most effective," he explains, "it is desirable to totally bombard the viewer with lights and sounds, so his attention is absorbed like ink into a blotter. Yet, we wanted our projection and sound system to be lightweight and flexible enough to use off-premises for presentations, and even to let customers use it."

The last consideration was especially important because Forbes foresaw a healthy market for multimedia presentations utilized by advertising customers as collateral sales, training and public relations tools.

"It is essential in our part of the country for a full-service agency to be able to make sales presentations, because there aren't too many specialists available," he says. "In addition, as a general philosophy, we believe that an agency should be close enough to its clients to offer whatever services are necessary to sell the customer's products and services."

The theatre is 12 feet wide across the front of the room and 16 feet high. It is insulated to double as a sound-recording studio. The walls are acoustically paneled; the floor is carpeted;

and rheostat lighting controls give ultimate flexibility in illumination. A recessed cork-board at the front of the room is for displays, ad layouts, storyboards and other visuals. A 4 x 12-foot motorized projection screen can be raised and lowered in front of the corkboard without disturbing the displays.

A closet on the left side of the room holds props and displays. Next to it

Don Forbes lines up three slide projectors, a 16mm sound projector, and a synchronized sound system.

Push-button system permits Forbes to sync and playback film, slides and sound.

Projectors operate from projection booth, and cover the 4 x 12-foot screen.

is a refreshment bar, including a sink and refrigerator. A conference table is in the middle of the room with eight comfortable chairs around it. Four other chairs line the back wall.

"Although we can certainly put more than 12 people in the room, we have found that a maximum of 12 is most effective for exchanging ideas," Forbes says.

At the rear of the theatre is a separate projection room. It contains a Bell & Howell 16mm motion-picture sound projector with a modified Anton process lens, and three Kodak Ektagraphic slide projectors, model AF, with zoom lenses, and twin speakers, linked by a custom-made solid state control box to a Viking stereo reel-to-reel tape player.

The control box synchronizes and operates programs with the push of a button. Once a presentation is started, the operator can leave the projection room. The control box operates all four projectors (including dissolves and superimpositions), the room lighting, sound, and the projection screen. The system could be expanded to handle up to 12 projectors.

"We selected the Ektagraphic AF projectors because of their sturdy reliability and their automatic focus feature. You don't want a jammed or broken projector stalling a presentation," Forbes says. "In addition, now that the projector trays offer a choice of 80 or 140 slides, we can fill almost any program without making tray changes."

Forbes believes that almost all multimedia presentations can be achieved in no more than 15 minutes.

"There isn't much that you can't show and tell in that time," he says. "And that opens the door to discussion, which is the purpose of any sales or training program."

While the company can produce its own slides and sound, professional narrators and music are generally employed.

"We usually charge our customers \$1500 for each five minutes of production, and they get their money's worth," Forbes says.

The multimedia theatre is also used as a supplementary sound-recording studio and conference room. However, its availability is shrinking in proportion to the growing demand for time when Forbes is using the theatre for client presentations or for demonstration of programs produced for customers.

"As far as we are concerned, multimedia is an essential part of any advertising or marketing program in which we are involved," Forbes concludes. "And its value to us is increasing every day." □

Boom Boon.

We've taken our most versatile, best-performing unidirectional studio microphone, the *Shure SM53*, and made it even more versatile by developing a complete boom accessory system that equips the SM53 for every conceivable boom and "fish-pole" application! Shure design engineers started with a major breakthrough in design: a small, lightweight, extremely effective isolation mount. They developed a super-flexible isolation cable, a pair of highly-efficient front-and-rear windscreens, and a 20" boom extension pipe. Finally, they developed a complete boom assembly that combines unusually small size with superb control and noise isolation. Result: an accessory lineup that makes every Shure SM53 studio microphone a complete microphone system! Write:

Shure Brothers Inc.,
222 Hartrey Ave., Evanston, Ill. 60204.

SHURE

In 1950, the home office of the Combined Insurance Company of America was a renovated single-story brick dwelling. In the tight confines of a slanted attic, our "Audio-Visual Communications Center" was born. The entire inventory of equipment: one Magnecord tape recorder, microphone and several Bell tape recorders we used to duplicate mate-

As the company grew and prospered under the imaginative, driving leadership of its founder (and now Chairman of the Board), W. Clement Stone, we knew that our modest efforts were destined to play a key role in spreading the philosophy and in sharing his inspiration with a rapidly-growing field sales force. And in those modest quarters, we dreamed of the day, now realized, when Combined would have "the most integrated communications facility in the business," where audio-visual media could be created, designed, produced and utilized for the most effective training and promotion at all levels of management with the utmost efficiency and effectiveness.

During the company's rapid growth period in the 50's and 60's, sales, management and employee training programs were reinforced with unique communication techniques. These were developed at the Home Office to help

New Communication Center at Chicago's Combined Insurance

A 20-year dream of completely-integrated facilities for audiovisual media—from design to utilization—has been realized at this company's new headquarters building

**by Michael J. Ritt, Communications Director,
Combined Insurance Company of America**

Video production scene, (from "The Man, the Philosophy, the System and You") as Combined's National Sales Manager, Earl Forte (left) interviews Board Chairman, W. Clement Stone.

Administrative direction of the Center is Mike Ritt's responsibility from this office where he can monitor operations.

speed the learning process, and to improve the quality of our instruction and attain real understanding. They also insured that our motivational efforts would have a lasting effect.

In 1969, Board Chairman Stone, with his customary wisdom and foresight, agreed that an enlarged, complete Communications Center was a wise investment. With the construction of an 11-floor addition to Combined's Home Office on Chicago's North Broadway, the entire seventh floor (15,500 square feet) was allocated to this enlarged Communications Center.

Our Company's two decades of rapid growth not only reflected wide public acceptance of our products, they also brought comparable and ever-increasing responsibilities to the audio-visual department. Our sales, management and employee training programs had to be reinforced with

most effective communication techniques. All audio-visual media useful in speeding the learning process and improving the consistency of both instruction and comprehension were tried and tested as we met an ever-growing need.

Motion pictures, silent and sound filmstrips, audio and video tapes, overhead projection, charts, chalkboards, and still photography were among the primary tools at hand. It was our task "to insure that the Company's motivational programs achieved lasting effectiveness." As active members of the Industrial Audio-Visual Association (since 1953), we benefited greatly through our sharing of experience with other audio-visual managers within U.S. industry.

Now we reached the pinnacle of opportunity: an entire floor wholly devoted to the best communications facilities possible!

Initial planning of the Company's 11-story addition housing our new Center had already been completed. The basic design called for curtain wall construction with columns on 22 foot centers. Ceiling heights were fixed in advance. But we needed *width* for clear viewing areas in meeting rooms and the auditorium and needed *height* for our TV studio to handle lights, mikes, and props!

The mandate was clear: what we also needed was specialized, experienced technical know-how to assure perfection in sight, sound and viewing and understanding of fairly new concepts in electronic distribution of the full range of audio-visual media throughout our floor. A comprehensive survey of all recent developments turned up the one firm we believed most capable of meeting our consultant requirements: Hubert Wilke, Inc.

The Wilke group has met and solved similar facility problems in a multitude of buildings in the U.S. and abroad. We turned to them with confidence and within a very brief period we had our *team*: Combined's architectural firm, A. Epstein and Son, Hubert Wilke, Inc. and myself.

The thoroughness with which Wilke organization attacked our problems will be of special interest to those who face similar problems. The services covered two key phases:

PHASE ONE: Planning facilities allocation of space and estimating

Central A-V Distribution closeup shows technician adjusting audio on Revovox recorder in panel for transmission to selected location.

budget. Phase one was completed with a written report of recommendations supported by preliminary layouts and budgets covering all areas agreed upon for facilities consideration. The estimated budget for all new equipment and installation charges included a cost breakdown for every piece of equipment in order that we could weigh the value and potential use of every item in relation to the budget.

PHASE TWO: Design, electrical and mechanical engineering and specifications of accepted ideas. Wilke's group was to prepare complete mechanical, structural and electrical drawings required by the architect to assure proper utilization of space and to accommodate A/V facilities for each room or area, providing for additional facilities the future may require. They were also to compile detailed, descriptive bid specifications for all desired equipment and its installation. Finally they were to consult on selection of winning bidders.

TV Studio production: interviewing winners of "Distinguished Salesmen Awards."

ALL PHOTOS BY COMBINED'S
A-V COMMUNICATIONS STAFF

Combined's meeting facilities enable instructors to utilize any of full range of filmed and video media at their push-button choice.

We knew what we wanted. It was the Wilke task to meet our needs with these qualifications:

1. We required that—to the extent possible—all of our existing equipment be incorporated into the System.
2. Designs should include maximum utilization of each piece of equipment without duplication wherever possible.

With these basic steps taken and fulfilled to as near-total satisfaction as is possible in the swiftly advancing field of A/V communication, let us turn to the achieved function and form of Combined's completed Communications Center.

Our Functions of the Center

The Center, briefly, has four main functions:

1. Training/meeting rooms fully-equipped for most useful means of audio-visual presentation.
2. Facilities for production of materials used at all company locations. These include both audio and video tapes, graphics and facilities to produce films, photographs, filmstrips and slides, overhead projection materials and models.
3. Duplication and distribution of any of these specialized A/V tools throughout the world.
4. Administrative offices, work-ops, storerooms, an employee lounge and dressing rooms.

The results of this comprehensive planning, consultation and final design are further analyzed in the following resume of each important segment of the Center (see Plan View center spread, this section). Let me interpret the "key" facilities of the Center as they relate to our total concepts of relative importance:

Electronic Distribution System

Today's "software" for both aural and visual presentation is familiar to

nearly everyone: the "live" or recorded voice, the photographic slide, filmstrip or motion picture film and the "live" or recorded television image. The "hardware" includes all the necessary equipment for their projection/presentation. The new ingredient for planners of a Communication facility is that of *electronic distribution* for these tools.

We provided for distribution to many selected locations from a central source within our Center as well as to and from outside sources. In most similar situations, requirements will call for *both* individually-controlled and electronically-distributed presentation facilities.

The economic factor in the installation of electronic distribution facilities within any new structure is most favorable: initially only the cabling and conduit runs need to be provided. This

can be done with a minimum of expense during building construction *if you plan in advance*. Equipment can be supplied as needed or when available. Future A/V developments are then provided for to help insure maximum, continuing use of the distribution system's potential. *The heart of the system is the TV studio control and distribution center.* Here's the way it worked out at our Center:

1. Through our electronic distribution system, some or all group meeting/training facilities as well as key executive offices are interconnected by closed-circuit television cable to the required projection or originating devices permanently installed in the TV Center.

A centralized reservation system schedules the electronic distribution of the requested audio or visual material from the Center as required for

TV studio console, where director controls cameras, sound and lighting.

Full view of the Center's A-V distribution center: amplifiers, AM-FM and TV tuners are at left on panels; monitors and D.A. amplifiers below table top; remote Revox recorder and bank of high-speed reel-to-reel tape duplicators.

various meetings throughout the building. The chairman or any meeting leader/trainer has direct voice contact with a Center projectionist who has the requested slides, film or videotape, for example, ready to be activated on script or word cues or by the speaker from a remote control panel in the room where the selected medium is to be used.

The relatively new but extremely flexible medium of videotape may, of course, be viewed only through this form of electronic distribution and is thus ideally suited to this system.

2. Through this means of electronic distribution for presentations . . . any one of a variety of different, separate programs may be ordered from the TV control center and distributed electronically to selected locations throughout our building.

Or . . . a major employee relations

problem, or an announcement of broad, general importance may be presented simultaneously by the Company's Chairman or President or other members of the management team. Thus, a persuasive presentation may be videotaped and scheduled for a series of repeat playbacks in each meeting room until the required number of people throughout the Company have been briefed.

Training or employee indoctrination programs are videotaped in the Communications Center for transmission to group meetings simultaneously. Once the "show" is on tape, the program may be repeated as the need arises for day or night classes with the assurance that the enthusiasm and interest of the *original* performance is retained for *every* showing.

The distribution center is truly the "hub" around which all Center ac-

Four identical projection tables like this (below) are in rear-projection area serving auditorium and meeting rooms; note cable troughs at ceiling. Buhl optical wide-angle lenses provide maximum sharpness and luminosity.

tivities revolve. This area serves as the origination and distribution point for all programming, both audio and video, as well as the control center for related meeting room activities. Presently, we provide audio and video distribution to these nine key areas at 5050 Broadway: the large auditorium; four meeting rooms; two practice rooms; screening room; Communications Director's office; two Personnel Department training rooms on first floor; the Chairman's office and the President's office (both on sixth floor); the National Sales Manager's office on the 10th floor; and the Public Relations' office on first floor. The central paging and amplification system is also tied directly to the company switchboard on the second floor.

We are set up to receive off-the-air telecasts of VHF and UHF (Chicago channels 26 and 32).

We can monitor and record both audio and video programs originating in our meeting rooms, and we provide facilities for dubbing and editing high speed audio tapes (reel to reel and into cassettes) and videotapes.

Our installation contains equipment for manual operation of routing and switching to any desired facility through patch panels.

Originating Production Sources

We have to deal with a number of audio and visual media which is "fed" into our distribution system as required. Let's briefly review the types of originating sources which must be used:

1. **FILM CHAIN.** This consists of a 3-input optical multiplexer with television camera output. We use a single 16mm projector, modified for television use, plus a 2 x 2 slide projector. The audio and video outputs of the multiplexer are terminated at a patch panel. The output of the film chain is a video signal, derived from televising the film aperture of either the motion picture or slide projector. When the 16mm projector output is televised; video is delivered directly to the video console.

By setting up the proper patch plate on the panel, the video signal can be electronically distributed to any monitor/receiver station or it may be taped for later use.

2. **OFF-THE-AIR TV SIGNALS.** Television color tuners are located in one of the equipment racks adjacent to the patch panel. These can be tuned to receive any VHF or UHF television station. The video output from each tuner is then fed to the patch panel, where distribution is

Fourth floor classrooms, set up for training use, comfortably seat 30 students at worktables facing screen, chalkboard and TV monitors.

ers can relay the information to selected monitor/receivers. With these tuners, two separate off-the-air programs can be distributed simultaneously. Expansion space has been provided in the rack for additional units to permit more simultaneous air programming if required.

VIDEOTAPE RECORDERS. At present, the Center has nine Ampex one-inch videotape recorders. All VTRs are equipped to provide for color signals but presently we use only monochrome. These units can record and playback while their output is distributed, via the patch panel, to all monitor/receiver stations. These Ampex videotape recorders are portable and can be used anywhere in the distribution complex for either recording or playback, serving the TV studio or distribution center.

LIVE CAMERAS. We have two viewfinder-equipped Telemation 2100 vision cameras, complete with tripods, heads, and dollies. These cameras are normally used in the studio but also may be transported to any meeting or classroom or office when equipped with a retrieval panel. Thus, a camera used in any "remote" location can have its signals routed to the distribution center for videotaping or can be connected directly into the main video console.

The output from "live" studio cameras is routed through a Telemation switcher/fader and the special effects generator, which also accepts inputs from the two videotape recorders or the film chain, so that integrated programs can be put together with thorough, professional results.

Editing of electronic signal material is done most effectively with our Ampex one-inch models 7800 and 5800. The rack also houses a Vital Industries' Proc Amp, a Tektronix wave

Instructor using phone at "J" box within each meeting room to request a specific videotape for his class; central distribution will put it on monitors.

form monitor and two nine-inch Conrac monitors. Editing facilities are tied directly into the TV control console where the sync signal is picked up from a Telemation sync generator.

5. AUDIO SOURCES. Microphones may be used throughout the system, from classrooms, for example, to provide for voice recordings or to accompany video signals out of the TV or audio studios. Audio which originates in that studio is routed to the mixing console in the Audio Control area and then taped. Audio originating in the TV studio, after mixing, is taped in the Television Control room or fed to the patch panel for distribution.

6. AUDIO TAPE RECORDERS. Long a basic tool at Combined Insurance, the production of audio tapes

Remote control unit beside the lectern enables the meeting leader to operate 16mm projector; slide and filmstrip projectors and tape recorders as needed.

14 reel-to-reel Magnecord tape recorders are used at the Center for high speed duplication of tapes; note lightweight headset being used by technician.

is well provided for the Center. Both audio control and video control rooms are equipped with individual Revox audio tape recorders. The distribution center has 14 reel to reel rack-mounted Magnecord tape recorders used for program playback and recording as well as high-speed dubbing when reel-to-reel tape duplicating is required.

Electrical and rack space provision was also set up for cassette tape units. Both reel to reel and cassette recorders can be remotely controlled from any of our classrooms or wired stations.

In operation, our system uses a double-channel Revox stereo tape recorder with half-track stereo playback and record heads. One track carries narration/music "information"; the other will contain inaudible "beeps" at one or more frequencies. These "beeps" trigger the slide projector visual advance mechanism in synchronization with the sound track.

The classroom instructor may start, stop and rewind the tape from his remote location, thus completely controlling a presentation without any actual equipment in the classroom. We've automated audio-visuals!

7. DISTRIBUTION SYSTEM. To be fully understood, this system should be further explained. All of the *originating sources* previously noted (both audio and video) terminate in *two separate patch panels*: one for audio, the other for video signals.

A control room technician may, by patching, distribute any desired material to any single receiving station or any selected *group* of receiving stations: classrooms, offices, screening room, etc. Each of these reception points is equipped with one or more

wall-mounted control panels (see photo, page five). The panel carries an intercom handset w/hanger-switch, a signal light, shut-off switch for concealed buzzer, a volume control knob, and a microphone jack.

The jack plate for the remote control turret is a flush plate, mounted on a 6" x 6" x 4" wall box required to hold the proper multipin connector for the remote control cable. In use, the instructor has a small control turret on his desk.

Also included in our Central distribution console is an AM-FM tuner for off-the-air AM FM signals which may be redistributed throughout all of our inter-connected facilities in the building. Also on the console rack

are various audio and video distribution amplifiers.

8. MULTI-PURPOSE REAR-PROJECTION AREA. This merits a close look since it is one of the most efficient functional arrangements in our Center. We serve the larger auditorium and three meeting rooms with rear-screen projection (all use Polacoat screens) from this "common" projection area. Let's take a look at this working space and its many special features.

a. First, note the three-foot raised platforms on which we've built our projection tables, these being mounted on separate floating platforms. The three-foot bases also stop vibration from operating personnel movement.

b. Our choice of top-quality projection equipment on each table is worth itemizing: Graflex 16mm sound projectors; Kodak Super-8 sound film

Sales trainees can practice their approach to prospects and in rooms set up for both aural and videotape media.

Cassette tape duplication (on Pentagon equipment) enables Center to copy up to 12 one-hour cassettes (dual track) within four minutes from single master tape

PLANS FOR COMMUNICATIONS

The four primary functions of the Communications Center: training & meeting facilities; production of media; their duplication and distribution; and administration are shown on the following pages . . .

- AA. LOUNGE
- BB. SEPARATE AIR CONDITIONING

Rear projection areas behind auditorium and three meeting rooms are all provided with Polacoat rear screens (as at left above); projector stands are mounted on floating platforms for image stability. Trough above operator's head contains color-coded wiring of all equipment.

As the floor plan reveals, the Center's auditorium and three of its principal meeting rooms are all served by a common projection area. Unique features of this rear-projection space include its floating platforms beneath all projection stands; room-to-operator remote controls for instant communication. Each of the four tables has a 16mm Graflex film projector; four 2x2 35mm Carousel slide projectors; Kodak Ektograph fade and dissolve units, a 2x2 random-access slide projector; a DuKane sound slide film projector and a Kodak Super-8 film projector.

ELEVATION MEETING ROOM 742

projectors; 2 x 2 Carousel (Kodak) slide projectors; Kodak Ektagraphic slide projectors with matched fade and resolve units; 2 x 2 random access projectors and DuKane Micromatic sound filmstrip projectors. Most of this projection equipment is fitted with the Optical wide-angle projection lenses for optimum sharpness. Each of our meeting rooms and the auditorium are also equipped with DaLite Control front-projection screens when these are needed.

c. Lighting and light control are important features. In the rear projection area we control light levels required for setup, cleaning, servicing, etc. at each entrance and exit point with 3-way switches and dimmers. A work light may be switched in at each projector via convenient receptacles. When the area is operational, all lights except dim safety aisle illuminations are "off" to preserve total dark-

Recording a master tape at the audio console in Center's special audio studio.

Special mention should also be made of our remote control boxes. These are portable units with a sloping face and each of these contains controls for two 2 x 2 slide projectors (lamp; forward-reverse sequence and focus); 16mm sound projector controls for on/off; forward/reverse; and tape recorder control w/run/stop/rewind. In the large meeting room

there's also a dimmer rheostat control for room lights. Each box also has a push button for remote control of 35mm stripfilms.

All of these units can be operated by the meeting leader or instructor from a remote turret or by simply flipping a switch. The audio-visual technician can handle arrangements from his rear projection location.

Still photography is another responsibility at the Center; cameraman is using one of Company's recent incentive prizes.

lights behind rear-screens. Stray beams striking this type of screen from the rear degrades highlights and reduces contrast. Remote power rheostats mounted on each projection table permit the operator to control both room lighting and volume levels.

We call special attention to one of the most unique features within the Center, working areas of the Center. Special provision was made for six-inch square "troughs" running through the entire complex and carrying all of the necessary cables.

Conveniently accessible "behind the scenes," these troughs give us quick access to electronic circuits; each cable is numbered for identification. Repairs might be minimal, but for changing or rearrangement of wiring, etc., the troughs help us to avoid damage to walls and ceilings and simplify equipment changes or rearrangement of our apparatus.

Pentagon The professional's choice... high speed in-cassette and open reel duplicators

Expandability is but one of the many advantages Pentagon offers you, the professional.

Pictured here is a basic three unit system capable of providing simultaneously from either a reel to reel or cassette master copies in three different formats: in cassette, .150 mil open reel (for later loading into cassettes), and 1/4" open reel copies. A TRULY FLEXIBLE SYSTEM

All Pentagon duplicators come with the following professional features . . .

- | | |
|--|---|
| ☐ ACCUTRACK METERING | ☐ TRACK SELECTION SWITCH |
| ☐ MODULAR DESIGN | ☐ PLUG-IN CIRCUIT BOARDS |
| ☐ BIAS READOUT | ☐ TEST SWITCH |
| ☐ SYNCHRONOUS CAPSTAN MOTORS | ☐ EXPANDABILITY |
| ☐ CASSETTE HIGH TORQUE START-UP | ☐ SERVICEABILITY |

See why Pentagon should be your first choice when it comes to high speed duplicating equipment. WRITE

(312) 867-9200

The four Polacoat rear-projection screens served from central projection are each 12-foot by six-foot glass units, $\frac{3}{8}$ -inch thick. They're wide enough for multi-screen presentations. A very useful feature is the mounting of the vertical, movable chalkboards in front of each of these Polacoat screens, adding protection and providing efficient use.

The Center's Meeting Rooms

A closer look at the internal facilities of Combined's seventh-floor auditorium and meeting rooms will illustrate the attention to detail which we feel has made these quarters so

useful in the workaday life of our Company. Let's take a closer look at some of these features:

A. AUDITORIUM. This room has a seating capacity of 90 in an auditorium setup and 50 with a classroom-type setup.

For overhead projection, note that the DaLite Electrol (8-foot x 8-foot) ceiling mounted screen has a "tieback" arrangement to eliminate a keystone effect when in use with an overhead or opaque projector.

And look at the mounted pair of television monitors which display video signals fed from our central facility: off-the-air; film and slide chain; from

videotape recorders or from our 16mm studio cameras.

We've also made it possible for the portable television cameras to be set up to pick up a demonstration or other activity and to display their own signals directly into the classroom/auditorium monitors. Signals from the cameras may also be sent to "center control" for taping or redistributing "live" as performed. This can be done simultaneously with room display.

We provide audio sources in the auditorium and three meeting rooms for 16mm sound films; audio accompanying video images; audio tape; voice reinforcement and "live" voice from external sources. Altec speakers give us excellent sound fidelity and clarity in all these facilities. The 8-inch speakers are flush-mounted in ceilings and spaced for utmost clarity and intelligibility at low levels throughout the room(s). They're fortified

IF IT'S A UNIQUE
PROJECTION SYSTEM...

it's from

BUHL

BUHL'S VERSATILE "SCREEN FILLER"

... a new long throw zoom projection system!

- Screen widths from 5' to 20' — and —
- Projection distances from 10' to 200'

By combining either of two prime lenses with Buhl's variable power optical module, focal lengths from 5.25" to 13.75" are available... focal length range can be extended to cover from 3.75" to 19.25"! The 'Screen Filler' system has infinite capabilities... takes guess work out of long throw projection situations —

get all the details from Buhl... the "Problem Solvers"!

Unusual Application? Wide Angle, Long or Short Throw, Zoom, Anamorphic and Rear Projection Lenses for all popular 16mm, 8mm, Filmstrip and Slide Projectors are "standard" from Buhl...

BUHL 1,200 WATT HI-LITE PROJECTOR

... the professional's choice!

HI-LITE Projectors & Optical Systems, engineered to utilize the full 1,200 watts of power, are for those who demand peak performance & brilliant screen images, even at extremely long throws. HI-LITE models in Auto/Focus and Random Access are available...

HI-LITE's also perform well with electronic dissolve systems.

BUHL OPTICAL COMPANY

Dept. BS72 • 1009 Beech Ave. Pittsburgh, Pa. 15233 • Phone (412) 321-0076

BUHL

Well-organized 2x2 slide files contain over 4,000 subjects, each coded numerically and cross-indexed for location

quality Altec audio amplifiers, pre-amplifiers, mixers, etc., all remotely located in racks and consoles at "center control".

In addition, a column speaker flares each side of the rear projection screen to provide sound for rear-screen display programs. A conveniently located selector switch in the wall-mounted retrieval panel enables us to choose either ceiling speakers or the column units, depending on room use.

At the lectern in the auditorium, depending on meeting requirements, there are controls for 16mm sound films; slide projection; a center-screen random access 2 x 2 projector; tape recorder or 35mm sound or still filmstrip projection!

B. TRAINING ROOMS. All rooms are identical in capacity, operation and function. These three areas have

capacity; seating arrangements
size tables with three seats apiece,
ing the screen.

As previously noted, all three train-
rooms are served by the common
projection area. Exterior light
control is assured by black-out draping
the window spaces.

CONFERENCE ROOM. This room
is arranged for mobile equipment (not
used by rear-projection area). All
projection equipment utilizes the con-
cealed manual roll-down screen. Other
than this, the conference room has all
the central distribution facilities simi-
lar to the auditorium and training
rooms.

Let's Look to Production

Once our responsibilities are con-
stant in creation and design of A/V
ware, step into the well-equipped
24-foot x 40-foot TV studio for a
few moments. Here we have provided
complete facilities for staging and re-
cording widely-used videotape and
live TV material.

Basic equipment is Telemation for
professional quality and assured E.I.A.
standards. This initial installation pro-
vides for monochrome production,
with provision for gradual change-over
to color, when management require-
ments indicate this need. Basically,
we are set up with a two-camera op-
eration, with both fixed and portable
lighting, all fabricated for us by Hub
Electric, Chicago specialists. Hub's
installation provides a full ceiling
channel-grid system with surface-

mounted mobile rail channel, hung on
ceiling clamps. This permits moving
lights wherever needed at minimum
time/cost. Locate a fixture, plug in
its pigtail at the nearest twist-lock
receptacle and we're ready! There are
56 separate circuits including 12 with
20-amp capacity, feeding into six dual
baseboard outlets; the latter circuits
are for portable lamps.

The 68 total circuits provide for
both present and future needs. At
present our use factor is only 25
percent but we attained flexibility by
preplanning with many more circuits
than we now require.

All of our power is controlled
through a dimmer rack and patch
panel with a total of six 6KW circuits
dimable; four additional 6KW circuits
are not dimable. Accessibility of the
dimmer rack and patch panel is made
simple by locating them in a nearby
corner of the studio, adjacent to the
control room.

Studio control at our 18-inch square
console, with sloping front, provides
console controllers with six two-scene
pre-set controls with three position-
selector switches, a fader assembly,
pilot lights; four two-position switches,
pilot lighted and one key switch, also
pilot lighted.

With this system, the lighting direc-
tor can patch up any series of lights,
single or in multiples. Then, from the
TV studio console, he can adjust the
light intensity of any lamp or group of
lamps for two scenes, switching and/
or fading between "presets" as well as

Center's art studio, where Jack Berg prepares animation, titles and set design
and Jim Artman does layouts of folders, tape packages; doubles as cameraman.

plays, Free Design Kit available.

POLACOAT, Inc.
9750 CONKLIN RD.
CINCINNATI, OHIO 45242

on off switching of fixed lights not on the dimming circuits.

Microphone pickup (Shure microphones are specified here) is via four jacks beneath the studio control windows; eight additional jacks are located in gang wall boxes within the studio. An audio monitor is located above the control portal so that the operator can communicate into the studio via a desk mike; any audio material can be piped from the turntable, audio tape recorder or videotape recorder into the TV studio.

Now we're ready to roll on our two Telemation 2100 viewfinder cameras; cables from these cameras enter the control room through an opening beneath the control room portal window.

Note that the floor of the TV studio is covered with seamless linoleum, laid over a very smooth surface to help assure flawless camera movement during dolly operation. Acoustical perfection of both walls and studio ceiling was achieved by using Techtim covering.

Behind the 10-foot wide control room twin windows of quarter-inch plate glass, we're ready with video controls of both studio cameras. We're set to monitor their wave forms and line outputs, switch and fade camera outputs, put in synchronizing pulses and provide audio mixing. A new Ampex 7800 one-inch videotape recorder is at the left of the console and "remote" to it for ready use.

Other central facilities merit some detailed explanation:

SCREENING ROOM. This provides facilities for previewing, editing and

arranging of A/V materials by technical personnel and training staffers. A ceiling-mounted screen is on hand for front projection when needed. This room, like our meeting rooms, is set up to originate or receive any audio or video signal from the main distribution console or directly from the video console.

PRACTICE ROOMS. Two of these are provided in our "complex" for intimate rehearsal use or for practicing audio or visual presentations. It is important to note that these are also multi-purpose rooms used by salesmen both to videotape themselves in role-playing situations and to serve as special study rooms for salesmen who need extra work. We find it most helpful to provide audio tape recording to a distribution room recorder with immediate playback by the user in each of these practice rooms. Controls are provided for this purpose, feeding into 8-inch ceiling speakers.

AUDIO STUDIO & CONTROLS: Our facilities underscore the advantages of our many years of experience in the use of audio tapes throughout the company. We built carefully on our know-how to provide the finest we could obtain for our Communications Center audio studio and control room.

This special studio has two microphones, each with desk stand. A high-fidelity speaker is wall-mounted to provide audio for tape playback and "talkback" from the control room just outside. This control area has a console table and an equipment rack housing the pre-amp mixer, power amplifier, two tape recorders, a record player and jack fields—all control

equipment necessary for efficient operation.

Inputs from the two studio mics are wired to five-channel audio mixer, connected so that it can be fed either (or both) tape recorders and to the control room monitor speaker.

AUDIO TAPE DUPLICATION. Duplication is very important to us. We have, for example, 12 Pentagon cassette duplicator recorders (models C 1,000) and this bank of high-speed equipment enables us to duplicate audiotapes very quickly. For reel tape duplication, we've set up seven Magnecord 1021's and a Magnecord Model PT603X machine.

Currently, tapes for our Company *Sounds of Success* individual case training program are being turned out. This high-speed equipment can duplicate 12 one-hour tapes in just 12 minutes! In the past six months we have turned out 10,000 of these tapes. After extensive testing of many brands of tape cassettes, we have standardized on those of TDK Electronics Company which have proved to be exceptionally reliable, jam proof, and with excellent sound quality.

Administrative & Service Facilities

The Communications Center does a lot more than meets the visitor's eye. Behind the scenes there are the tools of administration, preparing artwork, still photography, and workshops for repair, set construction and storage. A few brief notes will take our readers through these essential areas and introduce us to our well organized vaults.

DIRECTOR'S OFFICE. My own quarters are equipped in the same manner as our meeting rooms. Planning sessions and frequent evaluation of audio or visual programs underway can be accomplished without interrupting a meeting or going to the screening room. Check the monitor and the floor!

GRAPHIC ARTS. In our own art studio, two capable artists prepare graphics, title cards, set designs and costumes. They're a versatile team experienced in film, slide and slide production as well as in preparation of print material we help to create.

STILL PHOTOGRAPHY. This is an ever-present Company need. The photo studio is in constant use for portrait photos, promotional photos and the color sequences used for film strips and slides. This department houses a well-organized central filing system for all company photos and negatives.

DARKROOM facilities backstop the photo studio. This darkroom is used to process all black & white material.

Chief technician and service man for all of the Center's electronic equipment is John Schmitz, shown as he checks tape recorder just returned from the field.

color processing is handled by an outside laboratory). Both studio and classroom staffers serve the entire company: Public Relations, Personnel and Sales Departments. We even do support pictures for our executives!

WORKSHOPS & STORAGE also have to be organized. One of these, for projector storage, handles all the equipment required for Sales meetings across the land. An electrical workshop helps keep all this electronic gear in top-shape for use anywhere.

VAULTS. A humidity-controlled film vault was set up to efficiently, safely store company microfilms, 2 x 2 slides, 8mm films, videotapes and reels and audio tape.

INTERCOM SYSTEM is a "must" for the Communications Center worthy of the name. Our custom-designed system has 12 strategic locations and a technician is equipped with a special lightweight headset which can be connected to any unit. This set allows him to monitor or to communicate with our general call system with any of the studios or meeting rooms.

Thanks to the Wilke group we had a fine, basic plan, complete specifications, and were well-armed with background. The Center began to take present form when Rich Engineering Company of Chicago began the wise, key work of actual installation.

They merit this word of heartfelt testimony for ability and talent. In addition to equipment installation, our personnel did the fabrication of nearly all complements and, on many occasions, handled additional re-design to conform with our requirements. Finally, they backed this all up with a one-year guarantee for parts and labor, although several supplier warranties were only 90 days.

On completion of our installation, they gave us a complete demonstration as well as detailed instructions for system operation. They also provided us with a block schematic diagram showing the function of and interconnection of all equipment, including identification.

People and Regional Services

Our Communications Center (and our staff, too) is a lot more than computers, machines, electronics and automation. We at Combined are justifiably proud of the versatile and conscientious people of the Center's staff. In addition to my own job, there are nine others dedicated to the company's successful use of audio-visuals. Many of our people, though specialists in their own work, serve in other capacities. For example, our artists function as

cameramen and floor directors during production. They also design our sets and create all of the titles. Our photographers "double" as lighting men and can function as cameramen, should the need arise.

REGIONAL & BRANCH OFFICES throughout the United States and Canada are equipped with some 30 Ampex one-inch videotape installations, complete with cameras, lights, mikes, and monitors. This permits comprehensive A/V communication to and from our 5,000 representatives and managers throughout Combined's worldwide activity.

Each of these video-equipped areas also serves for internal training as salesmen practice their material in role-playing situations. Both salesmen and instructors can then evaluate the student's skills. Periodically, we train and retrain personnel in these regional and branch offices in the proper use of this A/V equipment as well as on preventative maintenance.

Humidity-controlled film & tape vault where all masters and duplicates for Center videotapes are stored w/care.

Helping to make sure equipment keeps on-the-move, our reference lists are furnished to the field from the Center. We provide lists for example, of all Ampex videotape dealers, all Sony recorder dealers and electronic repair services.

Effective Operations & the Center

Having the kind of modern facilities which our Company has provided is only a *beginning*. Their effective use, fortified by thinking creatively of the Company's developing needs, is the *real goal* for all of us. It begins at Combined's Center with the *attitude* we have. Anyone who requests our services is our *client* and must be treated accordingly.

We pride ourselves in our Com-

pany's leadership in *motivating men*. With 5,000 salesmen all on commission, one of our major tasks is that of developing a constant stream of inspirational and motivational material in the form of audio visual media. Fortunately, inspiration comes from the very top of our management and has been inculcated throughout the organization Mr. Stone founded.

CONVENTION SERVICES must be mentioned as another important Center responsibility. We are charged with the responsibility for all of the audio and visual set up and operations at all of our Company's international meetings, wherever they may be held. We also supply convention materials on call whenever a division holds a large sales meeting.

A Look to the Future

Ever-conscious of the fast-advancing arts and science of communication, we built the Communications Center as a flexible tool, readily adaptable to new, *proven* audio-visual developments.

And we're very much aware that today's closed circuit television programming may soon take us, via satellite, out to selected cities across the U.S. and to any part of the world. Our "Home Office" people may well be interconnected for audio-visual conferences. They will be able to evaluate, develop marketing ideas and check profits and losses—all without tedious travel and time-consuming problems.

We're evaluating all new video cassette and cartridge concepts, thinking of learning lab ideas, and studying educational television. And the people of tomorrow's Combined organization will certainly have been exposed to both educational and instructional TV techniques. There are currently some 150 educational retrieval systems located in U.S. elementary and secondary school systems as well as in leading U.S. colleges and universities.

Today, the push of a button in a library or study hall or dormitory can bring the learner a science lecture by Teller, a history lesson from Toynbee, math by Cooley. Such electronic experiences need not be purely passive; program instruction computerized and linked to typewriters or cathode ray displays permit the individual to learn at his own speed.

Here at the Communications Center, in planning future space requirements, improving all possible means of communications to the field from our Home Office, management must be *aware and prepared* to consider and use the most promising electronic innovations of the 60's and those certain to come!

RICH

Custom-Builds Communications Systems To Meet Your Exact Needs

You've probably heard or read more times than you care to count about how good other communications companies are. We at RICH, Inc. believe that the only true measurement should be based upon previous systems performance and customer satisfaction.

For more than a quarter of a century, our organization has provided custom communications installations running the gamut from the first project planning stages of an initial system through the largest and most complex systems imaginable.

If what you're looking for and what you really want is a professional approach to your requirements . . . creative engineering, craftsmanship in fabrication, quality equipment throughout, reliability in installation and service, and in-depth training of your personnel . . . then the company you should look to is ***RICH***.

Is Your Company Making Maximum Use of Audio-Visuals ?

Business Screen presents a handy compilation of interesting and effective ways that audio-visuals are now serving industry. Perhaps one of them is adaptable to your company.

Supply salesmen with an individual product film on Super 8 projectors to demonstrate superiority to retailers. *Du Pont Company's Zerex Division.*

Team up with a publication, and get editorial staff to promote a line of plumbing equipment. *Kohler Company, with House Beautiful Magazine.*

Sponsor a film on a worthwhile educational enterprise, Harlem as a public service. *Standard Oil (NJ).*

Use a TV comedian to provide entertainment interest in a film about phone long-distance dialing. *Southwestern Bell Telephone Co.*

Automate a three-screen, three-projector, multi-media presentation for less than \$500. *Baptist Home Mission Board.*

Use a short, amusing promotional film to contrast big city strap hanger with relaxed home-delivered membership. *Long Island Press.*

Set up a point-of-purchase miniature in dealer salesrooms to demonstrate the good features of radial tires. *Michelin Tire Corporation.*

Set up a "live" televised program on big-screen color to kick-off the holiday liquor-selling season for 4000

salesmen and distributors in 16 cities. *Brown-Forman Distillers Corp.*

9. Distribute free to schools an informative sound filmstrip on the broad subject of credit for home economics classes. *J. C. Penney Co.*

10. Set up a video news programs to be shown throughout the plant on product announcements, applications, personnel, recreational activities, community service. *IBM Systems Development.*

11. Provide salesmen with a portable synchronized sound slide system for making presentations to foreign travel prospects. *El Al Airlines.*

12. Demonstrate, through film, how the company is combatting water pollution in nine sections of the country in which it operates. *Kimberly-Clark Corp.*

13. Let a cinema verite cinematographer in to shoot an unrehearsed "inside look" at the working methods and psychological realities of a journalist's life. *Newsweek Magazine.*

14. Provide theatres with beautiful shorts subjects on attractive topics with only subliminal sell. *Eastman Kodak Company.*

15. Sponsor a historical overview of the past century to tie in with a company's own centennial. *Western Elec-*

tric Co.

16. Use a film on the facilities of a port to be shown to potential shippers throughout the world. *Port of New York Authority.*

17. Sponsor a series of films on fire and police departments as a means of encouraging public support for their activities. *Kemper Insurance Group of Companies.*

18. Produce a full-scale motion picture designed to be shown to just one man—the President of Mexico—on the subject of non-exploitive forest development. *Swindell Dressler Co. for Empaques de Carton Titan.*

19. Design corporate and marketing programs for all foreign markets similar to those used domestically. *IBM World Trade Corp.*

20. Organize TV distribution of films and tapes to 500 classrooms over a broad area for technical training. *U.S. Army Signal Center and School.*

21. Transfer videotaped training materials to Super 8 film for on-the-job training. *New England Telephone & Telegraph Co.*

22. Produce training films on two-inch tape for use in company-wide training programs on 16mm film transfers. *S & H Green Stamps.*

23. Build a custom-made prompting

system for help in lip sync photography of executives. *Honeywell, Inc.*

24. Sponsor a film to encourage citizens to demand better street lighting from municipal authorities. *General Electric Co.*

25. Train employees to handle complaints courteously and efficiently by means of a motion picture. *Firestone Tire & Rubber Co.*

26. Sponsor a really inexpensive sales film through Super 8 production. *Scholastic Magazine.*

27. Obtain invitations to screen a new sales film through clever, innovative advertising in trade papers. *National Semiconductor Corp.*

28. Produce a videotape "plant tour" to show visitors plant operations without revealing confidential work. *Foxboro Company.*

29. Arm salesmen with "hard sell" slidefilm programs for direct-to-the-consumer use. *British Overseas Airways Corp.*

30. Join with other companies to share sponsorship of travel films. *American Airlines, General Tire & Rubber, Oldsmobile Division, General Motors.*

31. Prepare an extensive multi-media program to back up an important speech by the president before an influential group. *Eastman Kodak Co.*

32. Produce films for farm audiences and show them at annual evening programs in rural communities. *John Deere & Co.*

33. Tie-up with a great sports tournament—Wimbledon—and a great sports figure—Rod Laver—for soft-sell promotion of a product. *Wilkinson Sword Co.*

34. Produce a series of films to focus on prison reform and encourage public action to alleviate the problems. *American Foundation's Institute of Corrections.*

35. Make a film on tourism to present to a customer for its own use. *McDonnell Douglas Corp. for Garuda Indonesian Airways.*

36. Design a multi-media presentation so adaptable that it can be used in large halls with maximum equipment, or out in the boondocks in an ultra-portable version. *John Deere & Co.*

37. Sponsor a film on career opportunities in a particular industry to show to high school students. *American Paper Institute.*

38. Make a series of films to encourage travel in the individual states, and to foster good will with state executives. *Humble Oil & Refining Co.*

39. Book films into theatres at the same time characters in the film are making local personal appearances. *Campbell Soup Co.*

40. Make a film to spur industry recruiting (graphic arts industry). *Pont Co.*

41. Put a sales story on film with sound for salesmen to take to the home with portable projector. *International Heater Co.*

42. Transpose art, magazine pages, folders, brochures into a motion picture to sell travel advertising. *Call's Magazine.*

43. Lessen the need for executive travel with multi-city videotape-telephone conferences. *Standard Co. (NJ).*

44. Aim a film at teen-age consumers to cut down on waste. *McDonald's.*

45. Put up a geodesic dome for one-day fair in Central Park with continuous showings of a film on a textile fibre. *Rohm & Haas Co.*

46. Make a filmstrip on black history to encourage black students to discover their heritage and learn of ancestors' contributions to the space of civilization. *The Coca Cola Company.*

47. Pack up a traveling van with closed circuit television equipment and take it out to prospective customers for portable workshops training clinics. *Michigan Credit Union League.*

48. Organize for major utility customers a Future Power Forum composed of a live stage show integrated with motion pictures and slides.

49. Team up with another sports put it all on film for regional sales. *Westinghouse Electric Corp.*

50. Produce an informative film on national scenic attraction, the Niagara River. *Gulf Oil Corp. with Eastman Kodak Co.*

51. Put a multi-media presentation involving several different media signs throughout the office in an executive house for clients and guests. *Dan Associates Advertising Agency.*

52. Set up an inflatable plastic environmental theatre to inundate audience with sight (on seven screens sound (everywhere) and tactile sensations from five-inch thick foam rubber floors. *Dayton Hudson Corp.*

53. Sponsor a film showing how the food industry can hire, train and use useful employees out of some previously "unemployable" ghetto dwellers. A case history of *Jewel Store* by *Family Circle Magazine.*

54. Make a motion picture to show to just one customer to prove product superiority and save loss of the account. *Gates Rubber Co.*

55. Produce a motion picture intended for supervisors on finding alcohol and urging them to get treatment. *Union Carbide Corp.*

Producers Report:

business — up
costs — up
future — good
films — more
budgets — lower
kickbacks — rare
Super 8 production — bad
producer's life — happy

A new Business Screen survey of independent industrial film producers conducted in July shows that business was generally up in the first half of 1972, although it has not been as rosy in all areas as we had forecast.

Other results of the survey showed that costs have continued to rise this year, being somewhat offset for many producers by stringent enforced economies. The future looks good to most producers, resulting from the expectation of many more films to be made, though at lower budgets. Producers find kickbacks to be very rare, localized, and never encountered with industrial clients. Super 8 production is the present state of the art was dismissed as a gimmick resulting in poor quality and little economy.

Perhaps more interesting than the statistical analysis of yes-no answers to our questions, however, were the comments made by producers, and their response to our open question at the end of the survey sheet asking them to sound off on subjects of their choice which affect our industry. Here are questions we asked in the survey, an analysis of the numerical response, and significant comments:

"Hope Reports, which has kept statistics on audiovisual expenditures for many years, says that sales were up for the first quarter of this year, based on surveys of film labs and A-V equipment dealers. Do you

find that the industrial film business in your area has improved to this amount in 1972?

42.5% replied that business was up at least 20% or more this year, while 57.5% found it to be not quite that good. Only a few reported a decline in business for 1972.

"We've done more work so far in '72 than in all of '71."

"It has remained much the same here. Some of these statistical reports, I believe, are a joke, based on returns that are filed hastily, and I am sure, inaccurately. Hardly any producer I know can resist manipulating those percentages to suit his ego or fantasies. Besides, how many will spend the time actually going to the ledgers to find out?"

"Second quarter of '72 is especially up."

"It is picking up as we get out and work to bring better sales effort to bear on prospective business."

2. How have your costs been over the past year. If they have risen, to how much per cent, would you estimate?

83.3% reported that costs were up, most in the 5-10% area, while 4.7% had experienced reduced costs, and 12% felt costs were the same.

"Out of sight."

"Costs down—forcibly by necessity."

"I've made a conscious effort to reduce costs. Therefore, I've run counter to a trend, if there has been

one."

"Rely more on freelance people to keep overhead down."

"No rise has been encountered in service costs. Living costs are up for the boss."

3. For some years, there has been an increasing tendency for some industrial communications activities that used to be undertaken by independent film producers, on film, to be now performed in-plant, on videotape. What can the producer do to counteract these moves? Should he offer a videotape production service for industry, himself?

56% thought that producers should find some way to offer, or are already offering, a videotape service to their clients. 17.6% felt that producers just could not compete in this area; and 26.4% believed that producers should not become involved in videotape production.

"The producer should offer ideas and services which the in-plant operation cannot provide. Change is the name of the game; the producer must expect and be ready for it."

"We have done so. You can't fight these empire builders."

"To survive, the producer must produce all kinds of A-V communications in every size and shape. If he sticks to just film alone he had better prepare for tough sledding."

"There is little or no profit in the type of production that an in-plant unit

can do. The independent producer should be concentrating on product the in-plant unit cannot do—generally higher quality, more sophisticated productions."

"We have noticed a slight reverse trend on in-house production, but we should get into videotape as without doubt it will continue to grow."

"We've been reasonably successful in tying in with industry's videotape programs, persuading them to put some of their exciting material on film."

"Too costly because of size of capital investment."

"Videotape and film will be so close to the same thing in ten years that we will not recognize our industry by present concepts."

"As videotape is further developed independent producers will have to get into the field."

"In-plant units will realize the limitations of videotape and the novelty (and drudgery) of handling this material will wear off."

"I think generally producers get too hung up on hardware. After all, what we're producing is software and it makes damn little difference what hardware is used. I think that producers ought to shed equipment anyway and rent what is needed."

"I use tape for rehearsals, but I'm not interested in the restrictions and limitations of that medium."

"Have talked about offering videotape, but no two customers seem to want the same kind."

"The commercial producer can never compete with the in-plant guy, especially one with this wonderful new toy. So we should pitch our services for the kind of subjects which require scattered location shooting, substantial editing, and particularly some creative thinking and writing—with the pitch that the film can be transferred to videotape for circulation to the intra-company net, with film prints available for circulation to 'projector' audiences."

4. We have heard from a few producers that the problem of kickbacks to sponsors was becoming a worrisome problem. Have you faced any situations like this recently?

90.5% have had no problem with kickbacks at all. 9.5% have had some experience, as indicated by the following comments:

"Once, in New York. Not here."

"Encountered this problem only in dealing with ad agencies. Stopped dealing with them, so haven't faced it recently."

"It has always been a real problem, and is growing worse."

"Hear about it, but never been faced with it."

"The problem of kickbacks has always been a worrisome problem. Our solution has been to pay nothing which is not in the written contract for the producer. It has cost us business most certainly. But all of us sleep nights. And we can look anybody in the eye, including Internal Revenue Service."

"Only when dealing with or through ad agencies, and then occasionally. Never with industrial clients."

"Maybe the biggest problem is defining a kickback."

5. Which way will the industrial film business go in the future? Become larger? Smaller? Bigger budget films? More films but with smaller budgets?

To this rather complicated question all of those responding felt that the industrial film production business would grow in the future. 23.2% believed that the industrial film of the future would carry a larger budget, while 76.8% expected lower budgets to prevail. 91% felt that they would produce more films per year in the future, and only 9% expected the quantity to diminish.

"This year we completed our first motion picture with a budget of more than \$200,000, and a few years ago this could not have happened."

"The really large budget (\$100,000 or more) film has, for all practical purposes, disappeared."

"More and more clients want us to use our brains instead of their money, so I'd say the big budget jobs are on the way out."

"Budgets are definitely becoming larger. The need for top quality production is well understood by clients that will spend large amounts in distribution."

"I think we've all learned a lesson on large staff, large capital investment from the past three years. We who survived were the 'old-timers' who had been there."

"Less experienced and beginning 'producers' rip off the low budget stuff to gain experience. They can have it."

"The big production houses of the '50's and '60's are doomed to extinction with a few exceptions which will survive on a foundation of entertainment films."

"The days of \$1000 a minute are coming to an end."

"We've got to offer more total services—not just films."

"Expect more tape work, and not multi-media systems, more in film release."

"Management is going to look more carefully at the dollar. The multi-media splurge may come to be seen as a conspiracy on the part of the A-V industry to sell circuses rather than goods and services."

"Budgets will get smaller or stay the same. The commercial producer will have to find ways of lowering his overhead, tighten up film crews and work more efficiently. The particularly difficult big city problem is the requirements laid down by film unions. Often as things get worse economically, their demands increase."

"In Canada we see a continuing development in the industrial film business, either on film or tape. I think the industrial film business will become larger; counteracting this is the tremendous flood of new, young filmmakers into the marketplace who will continue to make business more competitive. We are finding that in such cases, where the need is justified, bigger budgets are available. There is also an increase and a real need for the development of smaller budget productions. In our area there is a tremendous untapped source of new industrial business. The new filmmakers at present are primarily interested in feature films and entertainment."

"In my opinion the industrial filmmaker will do less business on conventional projects, such as corporate image and public service i.e. 'audience' pictures. But we will do more volume than we ever dreamed of when we first really widespread acceptance of the upcoming small group and 'personal' projectors—for sales aids, of course, but predominantly for new feasible methods for mass volume employee training and vocational education."

6. A few producers in Los Angeles, Denver and New York are offering Super 8 production to their clients, claiming significant production economies. What do you think of this idea?

84% thought that Super 8 production should not be considered by the professional industrial film producer; 1% disagreed.

"It's a way of getting business, but aside from basic material costs there isn't that much economy."

"Great if the quality holds up. Audience couldn't care less if it's Super 8 or 70mm. How interesting is it?"

"Cumbersome. Limited application."

"A stupid idea. Current production technique is too limited. All you save is stock cost—end cost is the same."

"A sales ploy to be foisted on unknowledgeable prospects."

"Good idea for some low budget projects."

"They are only deluding themselves and their clients. The state of the art is not advanced to allow the claimed economies on a professional level."

"I think the idea is great. It's consistent with my feeling that hardware is too much emphasis."

"Bull. The minimal saving in stock and equipment investment don't really provide that much saving. Scripts, crews, lighting, directing—all these will cost the same for production of equivalent value."

"Don't like it, but I'm afraid it's coming."

"It's not economy—it's a gimmick."

"Bull."

"Super 8 is not ready for professional production use. The emulsions aren't ready; the editing equipment isn't ready; the laboratories aren't ready."

"I've experimented with shooting Super 8 and have dropped it. As far as production economy is concerned the cost of the film is a small part of the production."

"We have tried it with limited success. Production quality is not up to standards we would like to maintain."

In your own work, do you generally rent the production equipment you need, or do you own all, or most of, your own equipment?

60% of the producers responding own all or most of their equipment; 27.7% own about half and rent the rest; while 22.3% believe in renting everything.

"We own practically all our own equipment. Not because it is necessarily cheaper, but because it is far more dependable and it's there when

you need it, where you need it. The trick is to get rid of equipment before it becomes so obsolete that its value shrinks away."

"Renting is the only way to travel. I don't own anything but a set of rewinds, a viewer and a projector."

"Own editing equipment. Rent cameras, lights, sound equipment."

"Own everything. Rental away from main production centers is too risky and too costly with air freight."

"Ease of renting 16mm self-blimped cameras makes it more economical to rent these when needed."

8. Do you send all your films to the same lab? Have you changed labs in the past few years?

53.6% send everything to the same labs and have stuck to the same lab for a number of years; 46.4% use different labs for different types of film, or shop around.

"We're about to switch. Our problem is finding good all-service labs. Most are limited and farm work out, losing quality and communication in the process."

"Local lab for 16mm. Out of town for Super 8 reductions."

"Split business between three 16mm labs and two filmstrip labs."

"I shop around."

"We have changed labs a few times in the past few years. This may be a problem of the East Coast producer, because labs here don't give the same service consistently as West Coast labs do. While prices are important, every change we have made has been because of poor or deteriorating service."

"We go to one lab for 35, another for 16, and still another for Super 8 reductions."

"In general just one, but we do use two others from time to time, just to keep everyone honest."

9. Are the types of films you are making now much different from those you were making several years ago in (1) subject matter, (2) intended audience, and (3) size of budget?

68% thought that subjects were changing; 71% thought audiences were changing.

"There is an increase in the proportion of films which are designed for television, and a small increase in the number of animated films."

"There's a trend from P.R. to promotion. This has been going on for

about ten years."

"Radically different. Very little 'general audience' interest. Strong trend toward specific subjects directed toward narrowly delineated target audiences, to accomplish 'hard' objectives. Those wonderful old 'telephone company' budgets are gone forever. What we look for is the 'small' subject with a large prospective print sale."

10. Are you generally happy with the work you are doing? Would you like your son or daughter to follow into the film production business?

97.5% were happy with their work, and 68.5% would like to have a son or daughter follow them into the film production business.

"I feel sorry for people who aren't in it because they're missing one of the most exciting and rewarding experiences life can offer. I'd love for my daughters to follow me into it. They'll never get rich, perhaps, and they'll have lean days, but they'll never have more fun earning a living."

"Young people must be steered from the business. The supply of filmmakers far, far exceeds any foreseeable demand."

"This is where the future is . . . communications. The old order passeth."

"I'd like my son to go into film production if he wanted to badly enough. Generally speaking, though, film producers are an intelligent group and could probably make more money doing something else if they put in the same hours."

"The tremendous variety of the work continues to attract."

"Maybe from job happiness; no for security."

"Of all my friends in other business who earn as much or more than I do, there isn't one who works as hard, as long, or on as erratic a daily schedule, and I don't think I'm unusual in this business."

"Industry is decaying in antiquated technology and incompetence. Videotape is the future."

"I really do like to see a production start from scratch, go through the thinking stages, and then finally emerge as a completed entity. I love the medium but am concentrating more on the conceptual and final use. I feel too many of us are ready to rush into shooting or onto the art board

without sufficient exploration of how the end product is going to be utilized."

Yes, with reservations. e.g. more 'public service' types of projects would be preferred over the industrial. Not enough films are made to enlighten people. Too many to sell them something. The film business as a career? Only for those who don't crave 'security' and love to worry."

Please feel free to sound off here on any subject at your own choice. The sounding board is yours, and we'd like to hear your thoughts on your own industry.

"I think that as a whole the industry is too bound to the past. I believe in the old saying, 'The world stands aside for the man who knows where he is going' and I think this applies to an industry, too."

"Major problem is inadequacy of steady substantial repeat business making projection of volume for each coming year difficult."

"There should be a ruling by the FTC or Justice Department to keep TV stations from offering film production to sponsors as a loss leader."

"Didactic scripted and predictable stuff no longer works. Sponsors should trust more to reality and less to the scripted hoke of the past."

"Our industry is still plagued by cut-rate operators on the one hand who take jobs on a price basis and then can't deliver quality, and on the other hand by the New York-Hollywood syndrome, which leads a prospective client to believe that if he doesn't spend a lot of money to get a New York or Hollywood producer he can't get a quality film."

"We are concerned about the fact that the number of quality producers has diminished. We're also concerned about the total inability of film-makers to convince the labor unions to adopt more progressive attitudes."

"Air freight forwarders are a bunch of pirates. But rental companies always ship forwarders because it's the easy way, never by airline freight, the cheapest."

"The biggest single problem for the private film producer in Canada is government interference and competition at all levels—federal, provincial and municipal. In other words, we are

competing with our own tax dollars in many areas. This is related to our political and social developments which have been gradually swinging toward welfare-stateism over the past several years. There are some encouraging signs on the horizon, at least Federally, that the pendulum is going to swing back again to a better level for two very good reasons: (1) there are many private producers who have experience to produce better films than government organizations, and (2) in general, if costing is done honestly, the private producer can do it far less expensively."

"I have felt that for the last five years the long-haired freaks in the film business have done it great harm. They are dropping out now that the fun is gone and the business is getting back to normal."

"Industry is incredibly disorganized. No proper trade association of producers. Professional standards not really set to reasonably high level. Education of would-be clients is sadly neglected."

"We need a leader."

"My biggest beef is what the East Coast unions have done to the industry. I always considered myself pro-union in theory and in fact. But the motion picture unions have never trained their people, they have never set up an adequate apprentice program (indeed, if any), and they have never cooperated with the industry in years of recession and genuine distress. Membership generally was based on recommendations of friends and relatives, which meant few or no blacks. Their main accomplishment was the establishment of high wage levels and large crew requirements even for simple industrial or educational films; which levels broke the backs of signatory producers. In what other industry can a man responsible for the type of duties a grip performs on small productions be paid \$65 daily, \$325 weekly, even though this may be his first time on job, and he never spent any time, anywhere learning his 'craft'? A skilled machinist doesn't earn that after years of training, apprenticeship, etc. Few teachers start with that salary, even with a Master's degree. Why should the unions be alarmed about runaway production? They cause it; as they caused

all government, industrial and educational production to run away from the signatory producers, large and small."

"My pet peeve is the TV new cameramen who moonlight with company equipment and materials, then producing documentaries at cut-throat budgets. Their work is usually poor and generally hurts the professional image."

"Federal government people simply must come up with uniform bidding procedures. Each agency has its own far-fetched, ridiculous demands."

"We are distressed by the proliferation of 'boutiques' who do not do good work, don't understand the economics of the film business, have no stability to protect the client, and generally give the industry a bad name. They 'play' at film-making instead of treating it as a business."

"Too many films are turned out annually by big business that are mindless, self-serving and wasteful of talent and money. Projects ought to be chosen with more thought about their eventual purpose and worth. If dealt with more honestly, no matter how commercial. Since film began, we have needed a National Film Union, somewhat like the Canadian Board, but more ambitious, encouraging film-makers to use their talents on subjects somewhat more rewarding than the awesome output of screwing and solving that is now the entertainment norm; educational films can really, yes, really be as exciting; at least as exciting as frosty beers, roaring engines, even tits."

"There should be greater effort by third party suppliers to sell the effectiveness of audio-visual communications to end users, like the Kodak campaign. Companies like E-Kane, Audiscan, Bell & Howell, Sony, LaBelle, Moviola, Ampex, 3M, etc."

"I'm convinced that we're using the film medium to not more than one or two percent of its potential usefulness—but the new volume will be the new kind of picture, sold in a new way with our Rolls Royce medium doing business the Pinto way. There's a whole bright new world for business films waiting for the guys who will lift their eyes up off the next few feet of pavement and really look down the road." □

TO PRODUCTION & LABORATORY EQUIPMENT
OF PARTICULAR INTEREST
TO THE INDUSTRIAL FILM PRODUCER

CAMERAS

ARRIFLEX CORP. OF AMERICA

The 16BL is a quiet-sound convertible camera for double or single system sound recording. The 16S/B is compact has 100' internal film capacity with 200' and 400' external magazines with torque motors. The 16M/B features greater capacity. A wide range of accessories is available. Also Model 35 BL silent 35mm camera.

BACH AURICON

Filmagnetic 16mm cameras with sound head for recording on prestripped film; Cine-Voice II, Pro 600, Pro 600 Special, Super 1200 self-blipped models for optical sound.

BELL & HOWELL

Model 70 16mm cameras: 70DR has 7 filming speeds, 70 HR for magazines. Also Eyemo 35mm.

CANON USA, INC.

Canon Scoopic 16 w/built-in 13-76mm zoom lens, motor drive, fully automatic exposure system with manual override. Canon Soundscoopic single system camera. Also Double Super 8 model.

CINEMA BEAULIEU/HERVIC

R16B P7 Automatic features reflex view finder, power zoom, provision for sync sound recording, 200 ft. magazine, accepts lenses for micro, macro and telescopic cinematography. Beaulieu News 16 is a single double system camera for news and documentary use. 40087M is a Super 8 camera with sound sync capabilities.

CINEMA PRODUCTS

CP-16 TV sound news camera. Silent. Weighs 9 lbs. Crystal controlled motor.

ECLAIR CORPORATION

Silent 16mm NPR permits sync sound without a blimp; 5-second magazine change; 400' loads, reflex viewing; rotating two-lens turret, crystal control sync motor, battery operated; variable shutter. Silent 16mm ACL has clip-on magazine; lightmeter behind lens. Very light weight.

FREZZOLINI ELECTRONICS

Frezzi-Cordless TV news single/double Auricon conversion with internal battery.

F&B CECO

TV news camera incorporates Frezzi-Cordless internal battery.

MITCHELL CAMERA CORP.

35mm and 16mm motion picture camera systems.

PAILLARD, INC.

EBM Electric 16 has built-in electronically controlled motor, rechargeable 12-volt magazine. Vario-Switar 16-100mm zoom w/through-the-lens metering. Lightweight sync pulse generator and pocket crystal control available as accessories. Also 16-Pro, noiseless, built-in magnetic sound.

GORDON YODER, INC.

Conversion of Cine-Voice, includes sync motor, silent counter

PRODUCTION ACCESSORIES

BERKEY COLORTRAN

The Mini-Crab dolly; crabs, tracks, front wheel steering; will carry camera operator and assistant; self-contained CO₂ powered hydraulic system.

BIRNS & SAWYER

Star dolly is crabbing spyder type pump-up center column.

CAMERA MART

Elemack dolly is small, crabs in direction

CENTURY PRECISION OPTICS

Custom made sound blimps.

CINEKAD ENGINEERING CO.

Cinekad camera brace support 16mm-35mm handheld movie camera

CINE 60

Electric zoom drive for Angenieux lenses. Powerbelts for Arriflex, etc. Sun Gun belts. Uni-Pack battery supply for Arri 16S and 16BL. 12" glass blimp for Arri 35 IIC and Stretch power cables.

CINTEL CORP.

Motor-driven pedestal, tripod-dolly cradle heads, friction heads, line studio equipment.

VICTOR DUNCAN INC.

Duncan Handgrip for Eclair NPR camera available for use with BEALA, fectone and other Eclair motors. Heater Barneys operating with 12" storage batteries. Sound Barneys.

F&B CECO

Sync motor for Eclair NPR; motor for other cameras; sync, variable speed stop-motion.

FELLER VACUUM FORM STUDIOS

Background panels in many styles wood, brick, etc. for studio use. Easy set up and stored.

FREZZOLINI ELECTRONICS

Portable power packs for driving camera motors.

JACK A. FROST

Generators, transformers and rectifiers

LAFAYETTE INSTRUMENT CO.

Time and motion study equipment. Camera drives for Bolex H-16, Bolex Howell 70 Series, Eastman Kodak Special and K-100. Plus other accessories for time lapse, surveillance, animation and memo motion.

LEOPOLD ENTERPRISES

Leo Pod for all 16mm cameras. Leo-Pack Model 1750A power supply for driving cameras, sun gun, etc.

MAGNASYNC MOVIOLA CORP.

Crab dolly for 16, 35mm cameras. Mobile camera support places camera in any position

NATIONAL CINE EQPT.

Hydrofluid Master tripod has fluid

360°, tilts -75° to +75°. Also
offload Junior, Model C and Model

ER-LISAND MACHINE CORP.

holder pod is adjustable five ways.

ACK PILL & ASSOC.

Zoom Control Pod, Model JP
provides camera support with
control of zoom, focus and motor with
shifting hand position. Also, the
generator, an efficient, low cost, mo-
electric power unit.

D PHOTO-CINE OPTICS

Sound Seal Blimp for Arriflex cam-
and Cine-Voice conversion for
renting 400 or 1200' magazine on
ion. Light weight SOS Body Brace.

R D CORP.

magazines, precision film transports,
shutters, portable power supplies
power converters.

ADNEY ELECTRIC CORP.

compact high-energy rechargeable bat-
tery packs; lights; sound equipment.
battery chargers and inverters.

CRYSTAL CONTROLS

CAMERA MART

Automatic camera control system
integrates sync cable, provides auto-
matic clap mark and counts take.

CRIMA PRODUCTS

Crystallok provides crystal control.
5 parts per million for BL cameras.
modification of camera or battery.
over end of motor housing.

COMMUNICATION ARTS, INC.

Universal crystal sync motor control
exchangeable for all motion picture
cameras. Fits on Cine 60 belts.

FOR DUNCAN, INC.

distributor of "Minilock A" crystal
control for Arri BL cameras.

AGE DEVICES, INC.

Universal crystal sync control for 16BL.
on-on. Weight 12 oz.

EFFECTONE AMERICA

Universal motor for Eclair. 50/60 cycles,
15 frames. Internal or external sync
reference.

ANIMATION & TITLING EQUIPMENT

COMPANY

paper, peg bars, ink, discs. Com-
plete animation supplies. Thriftax stand.

EV'S ANIMATION AIDS

Complete package of essential equip-
ment for the design and production of
types of animated or still photo-

graphic art visuals. Animator's discs,
inking boards, checking boards, anima-
tion punches and camera stands.

PAILLARD, INC.

The Super Titler can be used with many
16mm cameras, including the Bolex
H16 and H8, in either vertical or hori-
zontal position.

RICHMARK/OXBERRY

Two Oxberry Animation Stands avail-
able: 5332 (Filmmaker Series) designed
for the industrial and educational
16mm film producer, and the Model
5442 (Master Series) designed for the
professional animator.

SOS PHOTO-CINE-OPTICS

Tel-Animastands for special effects and
animation work. Tel-Animaprint for Hot
Press Titles.

LENSES

ANGENIEUX CORP.

Zoom lenses for all major motion pic-
ture cameras. Various length view find-
ers.

CAMERA MART

Optical FX unit provides multiple
images from single subject in many
variations.

CENTURY PRECISION CINE/OPTICS

Primary and zoom lenses for motion
picture and TV cameras.

CINEMA PRODUCTS

Canon K-35 macro zoom lens T2.8.
Focusses to within 2" of lens.

VICTOR DUNCAN, INC.

Custom supports for zoom and long-
focus lenses.

DYNASCIENCES CORP.

Dynalens provides steady image in
bumpy conditions.

QUESTAR, INC.

Questar cinema model telescope lens.

ALSO

Angenieux, Berthiot, Canon, Pan Cinor,
Rank-Taylor-Hobson, and Zeiss primary
and zoom lenses are available from
most motion picture equipment dealers.

INTERLOCK PROJECTORS

ALLIED IMPEX CORP.

Bauer P6 Studio projects optical and
magnetic tracks, records, transfers,
mixes.

ARRIFLEX COMPANY

Sonorex 16/16 records, transfers,
mixes, plays back.

W. A. PALMER FILMS, INC.

PGSS magnetic/optical interlock projec-
tor records, transfers, mixes, plays
back.

LIGHT METERS

KLING PHOTO CO.

Gossen Luna-Pro CdS exposure meters.

PHOTO RESEARCH CORP.

Spectra Footcandle meters have 3
ranges.

LIGHTING

BARDWELL & MC ALISTER

Complete line of studio and location
lighting. Individual fresnel spotlights,
stands, accessories, plus lightweight
Tungsten-Halogen models in single
units or complete kits.

BERKEY-COLORTRAN, INC.

Motion picture lighting equipment. Mini-
Pro Kit packs 3 light stands and acces-
sories in one case.

BIRNS & SAWYER, INC.

Line of studio and portable lights in-
cluding B&S Snooper underwater light
for depths to 5000'.

ART BODKINS-OPTICS, INC.

Par-64 and Par 36 daylight conversion
photolamps. Kelvin color balanced.

THE BREWSTER CORP.

Polecat telescoping and spring loaded
supports for photographic lights and
backgrounds.

JACK A. FROST

Rental, sales and service on wide range
of lighting equipment.

HERVIC/CINEMA BEAULIEU

Hervi-Quartz Location Lighting Kits,
lightweight, self-contained.

LOWEL-LIGHT PHOTO ENGINEERING

Light-weight, compact Lowell Link lo-
cation lighting equipment travels in one
case. Softlight folds into attache case.
Vari-flector II is new stand-mounted re-
flector that folds into compact case.

MOLE RICHARDSON CO.

Lighting equipment for motion picture
and TV studios. Arc lamps, Molequartz
kits, wide range of accessories.

JACK PILL & ASSOC.

Giraffe line of portable studio stands.

CHARLES ROSS, INC.

Lighting equipment, grip equipment,
props and generators available for sale
or rent.

SMITH-VICTOR CORP.

Quartz studio kits.

SYLVANIA ELECTRIC

Sun Gun is portable battery-operated
light.

JOHN WEBER CO.

Generators and lighting equipment.

EDITING, SPLICING & INSPECTION EQUIPMENT

ALLIED IMPEX CORP.

Hahnel motorized 16mm and 8mm splicers make wedge-shaped splices.

BIRNS & SAWYER, INC.

Film, Splicers—Model 2668 Instant Splicing Block for 16mm film/tape. Model 2669 Instant Splicing Block for 35mm film/tape.

CAMERA MART

Handiola editing equipment for 16mm and Super 8.

F&B CECO

Editing tables and bins. Viewers for 16 and 35mm editing. Automatic splicer and Magic Mylar splicing tape.

FILMKRAFT SERVICES

Model 16 O/M runs up to 3 magnetic tracks with a picture.

GRISWOLD MACHINE WORKS

Splicers for 8 and 16mm.

GRYPHON CORP.

Compact bench rewind units feature special lineal torque motors with stepless power controls.

THE HARWALD CORP.

Editing and viewing equipment, electronic film cleaners with cleaning and protection attachment. Film inspection machines with sound track, sprocket, thickness, splice and scratch defect detection; allows for immediate correction.

HOLLYWOOD CAMERA CO.

HollyCam portable hot splicer cuts, splices and welds in one operation. Features built-in carbide film scraper.

HOLLYWOOD FILM CO.

Manufacturers and distributors of all types of film handling devices, rewinds and splicers.

KALART VICTOR CORP.

Craig film editing equipment includes Pro Viewers, rewinds, splicers, frame counters, both as components and as complete projector editors. For 8mm, Super 8 and 16mm film.

KEM ELECTRONIC MECHANIC CORP.

KEM Universal horizontal editing machine. "Son of KEM" low-priced four-plate portable editing machine.

LIPSNER-SMITH CORP.

16 and 34mm professional projectors for fast, safe, high speed viewing and inspection. Ultrasonic cleaner for restoring clarity.

MAGNASYNC/MOVIOLA CORP.

Series 20 editing machines for 16 and 35mm. Also rewinders, editing tables, viewers and bins, synchronizer sound

readers available for optical or magnetic sound or combination. Moviola console editor.

MAIER HANCOCK INDUSTRIES

M-H heavy-duty Viewer/Editor is designed for continuous, professional use; features four rollers, one sprocket wheel and a film pressure plate with special mirror finish to prevent scratching. Models 816 and 816S portable hot splicers cut, splice and weld in one operation.

MASTEREEL IND., INC.

16 and 35mm split reels. Forms two separate usable film flanges, each capable of handling film on negative or positive cores; or tightwound just as when flanges are joined to make a reel. Aluminum, non-magnetic, 1200' size.

RAY MERCER & CO.

Film patches, Mercer film rule—16mm, 35mm and 16/35 combination.

MOTION PICTURE ENTER.

The Pro Splicers feature automatic scrapers, stainless steel construction and precision pins. Available for 16 and 35mm film.

NEUMADE PRODUCTS

A complete line of film handling and editing equipment including tables, rewinds, (hand and power) synchronizers, splicers, cleaners and accessory items.

PARLIAMENT EQUIP. CORP.

Guillotine splicer uses Mylar tape. Models for all sizes of film.

PAULMAR INC.

Automatic 16mm film inspection & splicing equipment.

JACK PILL & ASSOC.

Pic Sync editor with synchronous motor modification for forward and reverse operation at sound speed. Three position switch control forward and reverse and in the center position through an electro-magnetic clutch disengages motor to permit manual operation.

PRECISION LABS.

Film editor and optical sound reader for matching lip-sync. Also model with unitized synchronizer and 16 mm projection viewer.

PRETOSEAL MFG.

Thermo-fusion butt-weld splicing equipment.

RAYFIN ENTERPRISES

Steenbeck horizontal editing machines.

RTI—RESEARCH TECHNOLOGY, INC.

Splicers, viewers. Complete line of 16mm inspection and cleaning machines.

SHOWCHRON AMERICA

Several models of editing consoles for 16mm and 35mm in various configurations. Single sprocket drive. Rapid ad

vance retard of sound track. Foot operation.

SOS PHOTO-CINE-OPTICS

SOS. Prevost editing table is horizontal and portable. Pic-Sync synchronous footage counter, viewer and sound reader.

TRAID CORP.

Hot Splicers for 8, 16, and 35mm.

ZEISS IKON VOIGTLANDER

Editor with bright viewing screen 16mm.

ZYCO MFG. INC.

Double rank film slitter.

TECHNOLOGY GAP? WHO NEEDS IT!

If you are an optical effects producer, you can't afford a technology gap. Today's techniques and equipment must produce tomorrow's special effects.

Producers Service has been bridging technology gaps for 29 years with its design, manufacturing and servicing of the pioneer line of printing equipment and accessories.

As we enter into our fourth decade of progress, we are expanding our electro-optical and electro-mechanical line and expertise to meet the challenges of tomorrow.

We offer the ultimate in design capability, custom engineering and complete customer service for our products and those made by other manufacturers. Call Producers Service before you rent, lease or purchase — (213) 245-8424.

PRODUCERS SERVICE CORPORATION

Manufacturers of the Acme Optical Printers

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Camera Motor

PAILLARD, INC. has announced a new LSM electric motor to drive Bolex spring-driven 16mm cameras. There is provision

for 60 cycle 24 fps sync pulse and quartz synchronization. 12v ni-cad battery in grip. Automatic slating. 1900 Lower Rd., Linden, N.J. 07036.

Projection Lens

BUHI OPTICAL CO. has created an image amplifier which doubles screen image or cuts projection distance in half

when used with Super 8 projectors. Free standing. Adjustable. Price is \$21. 1009 Beech Avenue, Pittsburgh, Pa. 15233.

Filmstrip Accessory

LA BELLE INDUSTRIES, INC.'s new carton for protective storage of 16mm Compapak sight/sound filmstrip cartridges permits easy retrieval of programs by exposing identification labels on handles. 510 S. Worthington St., Oconomowoc, Wis. 53066.

Film Cleaner/Waxer

TREISE ENGINEERING, INC. has announced a new cleaner/waxer for 8/16mm or 16/35mm film which cleans

up newly slit film for cartridge or renovates older film. Handles reels up to 2400 ft. and operates at 250 fpm. 1941 First St., San Fernando, Calif. 91340

Programmer

3M COMPANY's new multi-media programming system uses digital data to trigger projectors. Can be used with any stereo recorder having independent channel controls. Digital information system is said to eliminate false cues from stray

signals, tape speed variations or tape drop-outs. Wollensak Digi-Cue programmers come in 3-, 6-, or 9-channel models. St. Paul, Minn. 55101.

Filmstrip Cans

RICHARD MANUFACTURING CO. is now delivering its Poly-Con plastic filmstrip cans with permanent foil-printed covers. Gold, silver and 12 other different colors of cans. P.O. Box 2041, Van Nuys, Calif. 91404.

Slide Projection System

OPTICAL RADIATION CORP. has introduced a new high-intensity slide projection system six times brighter than the

conventional 500 watt light source. It will project 4,000 lumens light output for auditorium use or in locations of high ambient light. Lamp module is warranted for 1500 hours. 6352 N. Irwindale Ave., Azusa, Calif. 91702.

Random Access System

AVCOM INC. has introduced an instant slide selection device, ISS, which works in conjunction with K Carousel and Ektographic slide projectors. Digital system. Slide access from 1/2 to 4 seconds. Will interface computers or other controls. Price \$450. 71 Mott Ave., Inwood, N.Y. 10936.

Slide Projection Accessory
MONTAGE PRODUCTIONS' Dial/Matic cycle control system automatically advances Kodak-type slide

jectors at pre-set intervals variable from one through ten seconds. Weighs 1 lb. Plugs in the back of projector. Ridgeford, N.J. 07070.

Editing Accessories

KEM ELECTRONIC MECHANICAL CORP. now has available for rental purchase Techniscope and anamorphic format picture modules for use with KEM Universal editing table. Permits use of inexpensive Techniscope prints. 225 Park Ave. S., New York, N.Y. 10003.

FILMKRAFT MFG. CO. has developed a Rewind Power Attachment that

attaches to any standard professional wind, automatically film fed to it. Price is \$322. Dept. W-1, 6850 Lexington, Hollywood, Calif. 90038.

TV Projector

KALARI VICTOR has introduced Tele-Beam large screen television projector using rare earth phosphors and give twice the light output of standard cathode ray tubes. Plainville, Conn. 06062.

"The People Package" from Viewlex

one worker, two prospects, half-a-dozen salesmen, your 10-man board of directors, two dozen distributors, 50 members of the press, 1000 stockholders . . .

Viewlex has the package.

Selling, sales training, OJT, PR, community relations, seminars, trade shows, financial PR, product presentations, distributor relations . . .

Viewlex has the package.

Film, filmstrip, slides, tape, cassettes, records . . . front projection, rear projection . . . portable-an-attache-case, or an auditorium-filling super-spectacle . . .

Viewlex has the package.

The package is Viewlex total audio-visual programming capability. We've put the 'software' together with the 'hardware' to offer you a complete, simplified audio-visual systems service—the most effective audio-visual equipment plus a coast-to-coast network of experienced, creative "producer partners" to plan and produce your programs. And, when the program and the equipment are made for each other, you gain in effectiveness, simplicity, reliability, and above all, you save money. It's a new idea and it took Viewlex to make it work.

Viewlex has the package. You may want it all. Or any part. Find out for yourself today what the Viewlex package can mean to you. Get your copy "We Do It All." It's free. There's no obligation. Just call Stephen Greene at 516-589-6600. Or write

BIG MESSAGE... SMALL BUDGET?

WHY NOT A FILMSTRIP? There's no faster, more economical, or dramatic way to get your message across. *Complicated story?* A colorful filmstrip can say it for you more clearly. *Restless client?* Let him relax while you project your best image. *A lot of territory to cover?* Filmstrips love to travel. Budget problems are gone! Filmstrips are comparatively economical to produce... and can be made to meet impossible deadlines. *Release prints?* One or ten thousand are unbelievably inexpensive. Contact us immediately. We can recommend filmstrip producers on whom you can rely.

Here at CFI your filmstrip producer is backed by a processing laboratory whose professional procedures and facilities produce the finest and the most consistent results possible.

CONSOLIDATED FILM INDUSTRIES

959 SEWARD STREET, HOLLYWOOD, CALIFORNIA 90038 / HO 2-0881 • HO 9-1441

picture parade

continued

Second Side, discusses the problem of solid waste disposal. It tries to explain why, "America the beautiful is being turned into a gigantic dump."

The film points out that though it is easy to point a finger at industry, the truth is there's a second side," concerned particularly with the paper and paper board container industry for which Ex-Cell-O makes machinery.

The second side of the story involves the demand of the consumer public for packaged products. The film presents experts who discuss objective approaches that have actually been initiated to combat the problem of waste disposal, and concludes that the public demand can be met without endangering the ecological balance.

Television stations have shown the film 280 times to an estimated audience of 12,568,300 viewers. 100 nontheatrical groups—civic organizations, industries and schools, for example—have shown the film to an audience just shy of a million viewers. Circulation to all audiences will continue.

"The film is one of the more successful to come out of America's industry's recognition of the ecological problem," according to Edwin Swanson of Modern Talking Picture Service, which circulates the film. Ex-Cell-O. "Ex-Cell-O did not make the film as a whitewash. They made to present, I think, a very accurate picture of not only what their responsibilities are with regard to the waste disposal problem but what responsibilities are of each and every American citizen."

Ex-Cell-O has sponsored films for a public interest approach for many years. One, a documentary about Project Hope hospital ship, won Academy Award as best short subject.

The Second Side was produced by Ex-Cell-O by Wilding Inc.

How to Combat the "Count Men"

The American Institute of Business Security film \$9 plus \$1 = *SHORTCHANGED!* is a valuable training film for supervisors and employees who deal with customers, handle cash and give change.

The film demonstrates how unexpected cash register operators taken for \$5 to \$20 each by professional "count men," and a step by step recap of each scene explains what is happening as it happens enabling the viewer to readily understand the theory involved. Only through understanding

...ding the methods of the profes-
sional "count man" can the cashier
...in to guard against him or her.
...education and training are the only
...s cash register clerks can protect
...themselves against these subtle raids
...the cash drawer.

Cashiers are shown how to suspect
probable count men and how these
...ies of people (from teenagers to
...ndmothers) operate to make hun-
...ds of dollars in just a few hours
...ork" each day. Finally, cash regis-
...operators are shown the simple,
...er-before-revealed procedure to
...losing money to count men—in
...pleasant manner that would never
...nd the honest customer who is
...ing a legitimate mistake.

9 plus \$1 = \$20: **SHORT-
RANGED!** is available for preview,
...al or purchase through BNA
...ins, 5615 Fishers Lane, Rockville,
... 20852.

W Chic for Chunky Chicks

...hion designers who create clothes
...women in the half-size range have
...onded to a long-felt need, accord-
...to a new film released by Celanese
...ers Marketing Company.

...ware that one-quarter of all
...uses purchased in America are
...ed for larger women, manufactur-
...are meeting the demand for new
...ng.

...haking old taboos about patterns
...colors the viewer will see in *New
...fashions for New Women*, the new
...rtment of clothing which encour-
...self expression and a carefree
...icipation in the new opportunities
...ing up for women. Whatever is in
...for the taller slimmer silhouette
...ow available in figure flattering
...portions which will propel fuller
...men of all ages into the styles of the
...enties.

...ew *Fashions for New Women* is
...nformative seven-minute film for
...men's programming on television.
...available from Modern TV.

Dreamy, Tranquil and Lushly Beautiful

...r showcase theatres in major
...kets are showing a new film on
... Virgin Islands, *The Possible
...um*, which is described as dreamy,
...equil and lushly beautiful. Pro-
...d by Frank Kavanaugh, the 13-
...ute color short was filmed on
...tion in St. Croix, St. John and St.
...omas, with original Island music
...e background.

...eatres may obtain the film, which
...good complement for any feature
...gram, from Association-Sterling/
...the theatrical division of Associ-
...in-Sterling Films. It is sponsored
...the U.S. Virgin Islands Govern-
... Information Center.

DON'T DO IT!

If you're in the market for a single or double system sound camera, **DON'T** place an order for **ANYTHING** before you've seen and handled the new CP-16 camera.

Look at the advantages . . . the little battery I'm holding will drive over 3600 feet of film through the CP-16. It snaps right into the side of the camera. A spare 8 oz. battery will fit in your shirt pocket and you'll never run out of power.

The D.C. servo motor is crystal-controlled . . . ready to shoot wireless double system sound on a moment's notice. Is it portable? The camera weighs a mere 9 lbs. with a battery pack installed! (15 lbs. ready to shoot w/Angenieux 12-120 and 400' of film.) If you're in a hurry (and most newscameramen are), magazines are "quick release". These features plus the CP-16's exceptional quietness (30dB at 3 feet) make it the most important domestically produced newsfilm camera in the past 25 years.

The old expression "Look before you leap" really applies here. Call the Victor Duncan office nearest you to schedule a personal demonstration.

A Man We'll All Long Remember: John Grierson, CBE, 1894-1972

The passing of an old friend and one of the truly "greats" in the world of factual motion picture production saddened us earlier in the year: John Grierson, born in 1894, died at Bath, England on February 12, 1972.

The man who gave us the term "documentary" in describing the films to which he gave his life to improve founded the National Film Board of Canada in 1939. As its first Chairman he helped to build an organization which continues to send into the world some of its finest, most creative films. And he helped form the Australian Commonwealth Film Unit.

Outspoken and gruff until you knew Grierson, he merited the honors heaped upon him and his land, was named a Commander of the Order of the British Empire. But we'll always remember him in carpet slippers, sitting on the floor of a Chicago hotel room with drink in hand, reminiscing on the vagaries of life and the potential of the film.

Come to Amsterdam Nov. 20-24th for Int'l Industrial Film Event

Amsterdam is the place to go November 20 to 24th if you want to see the

finest in industrial films, meet and participate with the top-level men who manage communications programs over Western Europe, Japan, The Netherlands' metropolis will be the 13th annual International Industrial Film Festival in the ultra-modern R.A.I. Congress Centre. This foreign showcase and meeting is sponsored by the Amsterdam Industrial Association in cooperation with the Federation of the Netherlands Industry, the Netherlands Association of Christian Employers and the Dutch Cinematographic Association.

U.S. entries to Amsterdam are being cleared on behalf of our own National Association of Manufacturers by a special committee of the Council of the International Nontheatrical Exhibition (CINE). As head of representative U.S. delegations at recent Festivals in Venice, Vienna, at West Berlin last year, at Barcelona, we are now endeavoring to recruit a group of industrial audio-visual executives to attend this event. Corporate management will profit by sending nominating delegates to Amsterdam, especially those who have international marketing objectives.

Awards to recent U.S. entries have been generous. But it is not the prizes giving but the learning and sharing that makes this event so notable and useful to all who serve the factual film.

Until now AV scratches never healed.

Until now, the process that actually removes scratches and blemishes from film—liquid gate printing—was way over priced for AV users of 8mm, Super 8 and 16 mm film.

Until now.

Now we've added liquid gate printing to our inventory of quality services for the AV market. And its cost doesn't look out of place on our very competitive price list.

So have faith in our healing. Take advantage of our low contact printing prices and have your internegative made with liquid gate printing. Send the job to us. Hollywood Valley

Look at things both ways!

Wyman-Gordon Co. does— with two Da-Lite Screens!

Wyman-Gordon Co., of Worcester, Mass., has a reputation for looking at things both ways before they make an engineering decision! And, they made a sound decision on projection screens by installing both a 6' x 12' rear projection screen and a 7' x 7' Executive Electrol®.

The Da-Lite Executive Electrol disappears into the ceiling when not in use to keep the conference room uncluttered. And, with the Da-Lite Rear Projection screen, the remote-controlled projectors are out of the way too!

Da-Lite offers a complete line of electrically operated screens in sizes from 50" to 20' square. Da-Lite rear projection screens are available in Da-Glas, Da-Plex and Da-Tex materials.

For all the facts, and the name of your nearest Audio-Visual Specialist, call or write Dept. B.S.

Planning a Board Room?

TRAINING CENTER, DISPLAY BOOTH OR CONFERENCE ROOM?

Consider a sophisticated visual display system using RANDOM ACCESS PROJECTORS. Professional projectors that give you instant access to any slide, in any sequence or at random, on remote command. We can provide you with numerous control options for Kodak's Ektagraphic RA-960 projector, or we can specifically engineer a Mast Series 137 projector for your precise application. Off-the-shelf control options include multiple remote command systems, dual-projector operation and panel-mount slimface control. Also pushbutton "keyset" control, computer interface, dissolve systems, self-contained display units and hi-intensity modules. Call us collect or mail the coupon for full details.

A/V programs sparkle and come alive... LA BELLE 3-WAY* COMMPAK CARTRIDGE

Continuous loop 16mm filmstrip and magnetic sound tape permanently synchronized and combined in a single cartridge. No rewind — no turnover — instant replay! Fast sequence animated scenes suggest motion with the economy of slide films. Up to 250 visuals plus 20 minute audio. Existing slide/sound programs easily adapted. Cartridges interchangeable among LaBelle Series 16 "audience-rated" projectors:

- *1 LA BELLE COURIER 16 (shown in illustration) — Portable attache case style. Take to audience for personalized communication. AC operated
- *2 LA BELLE SENTINEL 16 — Self contained. Looks like a table television set. Cartridge slips in front for instant program changes. Ideal for displays, small groups or carrels
- *3 LA BELLE TUTOR 16 — Projected image. Ideal for groups, meeting rooms, etc. Lightweight. Retractable handle. Clear images and crisp, convincing sound.

had a different and complementary record of growth. The new organization will bring together the strength that each organization has separately developed. These include different regions of the country, combining strong local with national structure, and growing working relationships with manufacturers and service companies."

Musicues' New Headquarters Facilities

Musicues, a division of Cue Recording, Inc. serving the music needs of the film and audio-visual industry, has moved to greatly expanded facilities at 1156 Avenue of the Americas, New York.

The new studios, control room, duplicating rooms and audio cassette packaging facilities have resulted from 20 years planning, and are designed particularly for service to the industrial and educational market.

Musicues, which is the sole U.S. distributor of Chappell Records Background Music Library, has expanded its stocks with several hundred hours of new material.

Super 8 Lab Expands

Super 8 City, wholly-owned subsidiary of Capital Film Laboratories, has doubled its space and moved to larger facilities in northeast Washington, D.C.

The new facility, at 1303 Gallatin Street, N.E., will enable the Super 8 staff to utilize additional projectors and rewind machines as well as increased loading space and platform area. Humidity control and filter processes are added pluses, according to CFL President, Peter Boyko.

New Super 8 Teleplayer Announced in Japan

Fuji Photo Film Company has announced, in Japan, a new Super 8 teleplayer, model CV500, which connects to any conventional color or b/w TV set.

A flying spot scanning system is used which converts Super 8 (or Fuji own Single 8) picture and optical sound into electrical signals which are then fed to the TV set. Slow motion and freeze frame effects are possible, as well as remote control.

Film cartridges of 5 and 11 minutes length, as well as 30 minute open reel will be utilized.

Resolution is said to be 300 lines or more during stop action, and 400 lines during regular run.

It is expected that the CV500 teleplayer will be marketed first in Japan. No information is available on when it may become available in the U.S.

SLIDE SYNC CASSETTE RECORDER

Combine a Telex Slide Sync Cassette Recorder with a remote controlled slide projector and create your own tape slide presentations. Record both the audio program and sync pulses (advance or stop) separately or simultaneously and you're able to present, instruct or train with a synchronized audio visual program. Effectively with one person or one hundred and to produce, erase, play and repeat program segments.

It's right, REPEAT. A single Review button adds the unique capability to instantly repeat any portion of the program maintaining perfect tape and slide synchronization. Great for emphasizing, studying, training, testing, or testing. Other functions provide complete control for tape and slide projector including remote focus, slide advance, tape start stop, instant pause, tone volume controls, tape fast forward, reverse and end-of-tape sensing.

As the Telex Slide Sync Cassette Recorder can record both audio and sync channels, add the sync track to a pre-recorded cassette or use the unit as a standard monitor recorder player. You can monitor the recording and add narration through built-in P.A. system to supplement the program without recording. All this combined with heavy-duty industrial design make this unit the most versatile slide sync cassette ever! Also available as a player only. Made in the U.S.A. and warranted for a full year.

Letter from a Producer to
an Eager Young Filmmaker Who
Has Just Received a
Letter from Cap Palmer

Dear Mr.:

You perhaps have not sent me your resume, so I cannot comment on your background and qualifications, though the suggestion that you have made a serious effort toward this profession and have some experience in a related field puts you somewhere other than at the end of the line.

What you have been told by Mr. Palmer is true, union obstacles and producers' preference for experienced men does present you with difficult doors to open. But young men open those doors continually and, if you are qualified, so can you. Perhaps I can help.

I am a busy man. If I were not, there would be no prospects for you here anyway. So make your presentation to me so concise that its very brevity will interest me. Keep your resume to a single page including only the *highlights* of your qualifications. If it should prompt a later interview, I will be impressed to learn there are even more good things to know about you. If I have already read everything there is to know about you—what will we talk about?

Send a "show reel", a piece of film that demonstrates what you are able to do with a script, camera, microphone, paintbrush or splicer. Don't expect to sit next to me as I watch and make excuses for any of it. I want to look at it at a time of my choosing and, if *everything* in the reel does not speak well of you—edit it. I am looking for that hard-to-define something that *experienced* men have *before* they get experience. If, having read this, you edit your show reel to anything over five or six minutes, go back and read it again.

If you are asked to come in for a chat, dress that day as you expect to dress while representing me with one of my clients. I am interested in your life style, but practicality makes me more interested in my client's life style and your flexibility. You can dress to look like a cameraman after you have become a cameraman.

Finally, if this were not a highly competitive field, difficult to attain and demanding once in it, there would be a lot more bad producers surviving. You *can* do anything if you want to do it hard enough. And to make your living the way Mr. Palmer and I do—it's worth every bit of the struggle.

Sincerely,
Jack Williamson

**Don't be
a slave
to your
Filmstrip
Negative**

Shooting the master negative is all important. If it isn't done well, you'll be a slave to it forever! A poor master negative means poor release prints.

Give us your originals, transparent or opaque, light or dark. It really doesn't matter. When we finish your negative, no one will be able to tell the difference.

Shooting masters is our specialty! We've been doing it for over 20 years. That's a lot of know-how. All with one purpose. To shoot the very best filmstrip masters . . . so that you can have release prints that you'll be proud to say are yours.

Why take chances! Call Berkey Manhattan. We'll be happy to discuss your shooting needs, time requirements and costs. No obligation, of course.

Berkey Manhattan

New Professional Publication for Filmmakers

The first issue of "Paillard Professional News" has just been published by Paillard Incorporated. The quarterly's emphasis is on news—what's new in equipment, applications, techniques and literature. Of special interest to 16mm cinematographers are product reports on the Bolex H-16 EBM camera, the Vario Switar POE-4 lens and comments on the POE by Burmese cinematographer James Bu. "Paillard Professional News" is available free of charge to Bolex owners, as well as to filmmakers active in industrial film production from Paillard Incorporated, 1900 Lower Road, Linden, N.J. 07036.

Guide to Overhead Projection and Transparency Making

A new, 24-page catalog titled "A Guide to Overhead Projection and Transparency Making" has suggestions for transparency preparation and production. Diazochrome multi-colored transparency films, mounts and processing equipment, and a wide range of auxiliary transparency-making materials. It is available from Scott Graphics, Inc., Visual Communication Division, Holyoke, Mass. 01040.

New Educational Film Catalog Offered

Timely motion pictures to supplement classroom training in schools, colleges, business and industry are listed in publication GIZ-2203A, an eight-page catalog describing 19 films free from commercial content, and produced primarily for educational purposes. Each film draws upon current General Electric state-of-the-art expertise to provide the student with both basic scientific concepts and examples of practical applications. The catalog is available from General Electric Educational Films, Corporations Park, Building 705, Scotia, N.Y. 12302.

Latest in "How-to-Do-It" Series Explains Leadering and Labeling

"This Is No Place for Creativity," latest in a series of pamphlets issued by Motion Picture Laboratories, is a basic introduction to the preparation of materials for the laboratory. It defines motion picture terms for the beginner and is illustrated with drawings to show both beginners and professionals how to leader and label their films according to IACL recommended standards. It is available to producers free from Motion Picture Laboratories, Inc., Box 2627, Memphis, Tenn. 38102.

MULTI-IMAGE AUTOMATION OFF THE SHELF

1. **QUADRA QUE 1 PROGRAMMER**—Quality and economy in a 4-channel magnetic tape programmer, complete with built-in power relay for motion picture control—automate any mix of four projectors.
2. **QUADRA QUE 2 PROGRAMMER**—Expands Quadra Que programming to eight channels or adds four channels to a Dynamic Que Dissolve—in either case using only a single tape track for pulses.
3. **DYNAMIC DISSOLVE CONTROL**—First and still best solid-state, multi-speed slide dissolve control for S&S and Kodak projectors—unmatched fast-to-super-slow dissolves, plus dazzling special effects.
4. **QUE SETTE RECORDER**—A 3-track cassette recorder specifically designed for use with multi-channel mag-tape programmers—uses one track for pulses and two additional tracks for amplified stereo sound.
5. **DYNAMIC QUE DISSOLVE**—The multi-speed dissolve control with its own built-in programmer to automate "Cut," "Medium Dissolve," "Lap Dissolve," "Alternate" and "Standby" with pushbutton ease.
6. **MEDIA MIX PROGRAMMER**—The original "out-performer"—a 27-channel, punched tape programmer with built-in synchronizer—an entire stage crew in a 10-pound package the size of a cigar box!
7. **TRI CUT CONTROL**—One compact unit to create high-speed "Cut" dissolves on each of three pairs of Kodak slide projectors for multi-screen shows—the bridge between conventional projection and multi-speed dissolves.
8. **SELECTROSLIDE 900 SLIDE PROJECTOR**—shows up to 500 slides non-stop ... shows 'em five times as bright ... changes 'em up to three times as fast. This is the *serious* slide projector you've been hearing about.

In short, the whole show. Multi-image without any of the pain or misery. We've solved the problems, we've figured the answers, and put them on the shelf. Nationwide. For more information and the address of your nearest Spindler & Sauppé dealer, write us today.

When you have a
question about
sponsored films...

Ask Modern

Draw on our experience.

We circulate sponsored films for more than 800 business firms, trade associations, government agencies and other clients. On their behalf, we make more than a million and a half bookings a year to the widest known range of audiences.

35 years of specializing in this business have taught us a lot about films, audiences and sponsors. And we keep learning new techniques for helping your film reach its full potential. Our research facilities include our own computers, exclusive mailing lists, 30 film libraries in the U.S. and Canada, and active contacts around the world.

Most important, we have the people. Experts. They're ready to consult with you, any time. We welcome inquiries from producers, agencies and counselors as well as sponsors, actual and potential.

What's your question? Ask the world's leading distributor of sponsored films and video tapes. **Ask Modern.**

The new Norelco **soundslidemoviefilmstrip machine** helps an expanding industry turn beginners into skilled operators without tying up experienced personnel!

The National Knitted Outerwear Association has developed a way for its member companies to meet a critical shortage of trained personnel through a remarkably effective in-plant training program that requires a minimum of instruction and guidance from skilled workers.

A series of six programs have been produced by the Association utilizing the unique multi-media talents of the Norelco PIP system. The programs enable individual and small groups of new employees to *teach themselves* how to operate intricate knitting machinery before going to the machine itself to perform a particular operation. Because of the effectiveness of the approach, additional PIP programs are being prepared to help elevate the skills of knitting personnel to even more sophisticated levels.

The PIP system combines all major audio-visual techniques in a sleek self-contained unit that's as easy to load and use as a tape recorder. With PIP, the dramatic realism of motion sequences are easily added

to ordinary slide or filmstrip presentations. Important concepts can be emphasized or clarified through animation, slowdowns and other techniques...all without creating costly or complex production problems.

What's more, PIP brings remarkable economies. For example, as a slide/filmstrip presentation, one foot of PIP super 8 film contains 72 visual frames and one foot of film can be duplicated for under 10¢ a foot. That's 72 visuals for under 10¢!

For the motion sequences, PIP saves some 80% to 90% of the film footage normally used. It doesn't have to run at a fixed rate of speed for titles or at a high rate of speed for motion. Regular sound movies take 120 film frames to show a still picture on the screen for just 5 seconds. With PIP, only 1 frame is needed... and the sound doesn't stop.

PIP can be used by individuals or small groups of trainees without the necessity of setting up a screen and projector, threading the film, etc. It's portable and the trainee can stop it, advance it one frame at a time, or fast forward and rewind it...with pushbutton simplicity.

PIP does not involve the complexities of videotape equipment such as sophisticated electronics, conflicting TV standards and high costs of production and duplication.

And PIP lends itself to all kinds of creative film techniques familiar to film makers. Animation, slowdowns, speed-ups, pop-ons, freeze-frames, frame changing to music...and lots of other ways of adding interest and clarity to film...can be done simply and economically.

Whatever your training or communication needs may be...chances are PIP can handle them more effectively *and* more economically. Get all the facts about PIP or make a date to see PIP in action. the best system to:
stimulate / educate

Norelco

the total video cassette concept for high-impact communication ...selling, informing, and training.

Ready Conversion of Existing Materials—

Any existing program material—motion picture film, slides, art, film strips or conventional reel-to-reel videotape can be easily and inexpensively converted to Norelco VCR cassettes. New programs can be produced or you can combine existing material with new programming. The advantage of using previously prepared materials gives you a low cost, flexible way to move into the wonderful new world of video cassettes.

The unlimited potential of television for effective business communication has now become a reality with the Norelco VCR video cassette system. For any business application on all management levels, companies can now create a totally new environment for selling, training, merchandising and informing. The Norelco VCR is one management tool that is so immediate, so audience-acceptable, that it *enhances* the presentation.

The Norelco VCR System is a complete, controlled viewing package for many different uses ranging from sales training to new product presentation . . . from dealer indoctrination programs to stockholders meetings.

This is business communication at its best: totally flexible, easy-to-use, and economically feasible. All kinds of management, technical, and marketing programs can be inexpensively produced and duplicated.

A VCR, A Cassette, A TV Receiver—that's the VCR System!

No more time-consuming set-ups or AV equipment distractions. To show a program or any part of the program, you insert a small cassette and push the button. You can stop and start, rewind and replay at will. The color—beautiful!

Light, Compact, Portable—Beautifully engineered for reliability and true portability, the Norelco VCR weighs only 31 lbs. Its design is modern with a low profile. Simple cassette operation . . . there is no threading of tape—it's all automatic. Seven push buttons control all operations.

Norelco VCR Cassette—This is the most compact video cassette of all . . . from the company that created the audio cassette concept which is now the worldwide standard. Ideal for storing, handling, mailing. It can be erased and used over and over again for either color or black-and-white programming.

editorial

Bidding procedures for Federal government film assignments are too complex, and proposals are unnecessarily expensive to prepare.

When Business Screen conducted a survey on producer attitudes about the state of the industry during July, one complaint registered over and over was the increasing difficulty and complexity of bidding for federal government production assignments.

Since that time we have had an opportunity to check on some of these complaints, and it is evident that a real problem exists.

Here are some of the problems which confront producers in dealing with government agencies:

- The bidding procedures are often exceedingly complex and difficult to understand.
- The sheer volume of paperwork required is beyond all belief.
- It seems not improbable that some invitations to bid are made *after* decisions have been made regarding producer selection, and bids are requested only to satisfy regulations.
- Producers are asked to perform expensive research in preparing a bid—research that often requires travel, purchase of reference materials, and when compounded by the large numbers of producers bidding, this represents hundreds and thousands of wasted hours to the film production industry as a whole.
- Many government agencies ask for elaborate treatments as part of a bid—treatments which require professional writers hired at some considerable expense, but these treatments are never recompensed. Accusations have been made by some producers that this free brain-picking has resulted in ideas being “borrowed” for use in the film up for bid, or in subsequent films by the same agency.
- Some bids are put up on such short notice for preparation that it seems very evident that a successful “bidder” had previously been chosen.
- Producers in the private industry

sector are asked to bid on production work in direct competition with bidders in publicly supported institutions.

Let's get down to a few specifics. Proposals were requested by the National Institute of Health in Bethesda, Md., last Spring on a film designed to encourage women to consider a career in dentistry (RFP NIH 72-4203 P). One response to this request, and it is typical of dozens of such responses prepared by producers to government bid requests that we have seen, runs to 21 pages of original typewritten material requiring the work of producer, writer, accountant over a period of a week or more. It includes a general technical approach, a lengthy treatment, a shooting outline, a proposed production schedule, a background of personnel detailed as to how they relate to the film under consideration, and an elaborate cost breakdown. This is not optional material, it is required of all bidders. What this amounts to, as we can see, is that the National Institutes of Health have required perhaps 50 or more producers to perform a hundred or more man-hours of creative work each to bid on a \$30,000 film. Surely, there must be better ways!

Here is a request for proposal issued by the Agency for International Development which was publicly announced on June 2, 1971, and published in the Commerce Business Daily, asking for a detailed proposal to be submitted by June 11 (later extended to June 15). During this period of time producers wishing to bid on the project are asked to (1) obtain copies of the RFP from the agency, (2) prepare, type and collate a long list, in many copies, of required information, (3) procure eight published items of background information obtainable only through the AID Educational and Communications Division in Washington, and (4) prepare a competitive treatment for the proposed project. One producer com-

plained that just to procure the background information would require two days. To represent a reasonably diligent effort, the background information would have to be read and digested. Then the writer would have to conceive, develop and write a comprehensive document which would represent a professional solution to a complex communication problem. All in three days! This kind of scheduling is enough to prevent responsible producers from bidding at all.

Sixty-one RFP's were issued by one federal agency for a series of films on drug abuse. Thirteen producers submitted bids. Most of them hired outside writers to prepare treatment. They went through the long process of physically preparing the proposal (including \$42 worth of Xerox copies), only to be informed that one of the *high* bids had been accepted because only a certain drug expert obtained by one particular producer could be used on the film. One wonders if any bids were really necessary at all, or if any bids were actually considered, or if the whole deal had not been engineered beforehand.

How many producers prepare the costly proposals required, bid as low as it is possible to do, and then find that the project will be produced by the University of Miami, or the University of California, or some other publicly supported institution easily able to underbid a producer in the private sector?

We haven't talked to a single producer who objects to the basic system of public bids for government films. But every single one objects to the way the bidding procedures are carried out.

It's time the federal agencies get together and set up uniform and fair procedures to stop the wasteful and expensive preparation of proposals now forced on producers who are already and equipped to serve the government well.

Bob Seymour

Now the best-known name in videotape is in videocassettes.

It's easy to recognize the benefits of videocassettes as an audiovisual tool. The handling ease. The added protection for your program material.

It's also easy to anticipate some possible problems. What about compatibility between different brands of cassettes and equipment? What about the quality of picture and sound?

We can help answer both questions.

First, "Scotch" Brand Videocassettes are

compatible with all $\frac{3}{4}$ " U-matic videocassette equipment available at this writing.

Second, we've provided our videocassettes with our most advanced videotape, "Scotch" High Energy. High Energy's remarkable magnetic properties were engineered specifically for recording at slower cassette speeds. It can provide you with color masters and duplicates every bit as good as reel-to-reel helical tape. Perhaps even better.

As the pioneer in videotape, 3M has long set the standards of quality. Today, we're setting those same standards in videocassettes.

For facts about today's videocassettes, write Market Services, Magnetic Products Division, 3M Center, St. Paul, Minn. 55101.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services -RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists.

Audio-Visual Market Reaches \$1.9 Billion

Audiovisual communications spending passed the \$1.9 billion mark in 1971, an 8% gain over 1970. This represents a strong comeback from the mediocre 3% increase of 1970 over the previous year, according to the new Hope Reports survey released in October.

AV product sales of equipment and materials were up 8%, amounting to an estimated \$1,440 million in 1971. This includes domestic sales to schools, colleges, business and industry, government, medicine and public health, community and religious institutions, plus those for export.

Sales of AV materials totaled an estimated \$793 million, which amounted to a 9% gain over 1970 sales of \$728 million. Equipment sales rose 7%, reaching an estimated \$541 million.

Of all media, filmstrips proved to be the "hot" item, with sales jumping 7%. Nontheatrical motion pictures, which had dipped 2% in 1970, came back strong with a gain of 8%.

Pre-recorded tape cassettes, records, reading materials, slides, multi-media kits, study prints, and maps and globes had a good year, with sales rising 10% in 1971. The only soft spot in the materials picture was that of magnetic tape.

Several hardware lines had strong sales gains in 1971. Sales of AV program control devices climbed 27% while studio and film production equipment went up 18%.

Presentation equipment such as magnetic boards and similar units, rear projection screens and other items came back from a big decline in 1970 by increasing 19%. Audio equipment sales scored a 14% increase.

Motion picture projector sales were good—16mm sound projectors up almost 7% and super 8mm projector sales up 12%. Dollar volume of both deotape recorders and closed-circuit television cameras dipped although unit sales were up slightly.

Data reported here is contained in the first volume of the 1972 Hope Reports annual series. *Hope Reports V-USA 1972* released in October, will be followed by a detailed study on the educational markets later in the fall. A third volume on training and the industrial AV market will be out in the winter.

This year, Hope Reports, 58 Car-

verdale Drive, Rochester, N.Y. 14618, has added a quarterly series reporting 1972 sales figures periodically.

Industrial A-V Man Named Chicago Archdiocese Communications Director

Michael J. Ritt, Jr., Director of Communications for Combined Insurance Company of America, has been appointed Interim Executive Director of the Archdiocese of Chicago with responsibility for implementing a comprehensive audio-visual communications network throughout the Chicago area.

Ritt, whose communications system for Combined Insurance is recognized as one of the foremost in American business today, will be serving the Archdiocese on temporary assignment from his company with the approval of W. Clement Stone, Combined Insurance Board Chairman.

While staffing the Communications Center and supervising the installation of audio-visual equipment throughout the Archdiocese, one of Ritt's prime responsibilities will be in directing the continued search for his permanent successor.

The Archdiocese communications plan calls for further investigation into the feasibility of a 2500 megahertz Instructional Television Fixed Service to distribute via closed circuit film materials, recordings and print data to receiving locations in classrooms, rectories, convents and parish halls.

Air Force Buys Up To 1,000 8mm Projectors

The U.S. Air Force has ordered up to 1,000 Fairchild Seventy-21AF rear-screen 8 mm projectors for use in recruiting offices throughout the country.

The contract award for 700 projectors on immediate delivery was made to Fairchild by Air Training Command's Mission Support Branch, Randolph Air Force Base, Texas. Because the ultimate number of projectors to be shipped has not yet been determined, the dollar amount of the contract was not released.

The projectors have been specially designed, allowing conversion to front screen projection by the flick of a switch.

Coca-Cola Training Project Awarded to Sterling Institute

Coca-Cola U.S.A. has awarded a major videocassette training project to Sterling Institute. Sterling, designer of the instructional programs, will produce the video portions in association with Teletronics International. A successful pilot program was created by Sterling Institute and produced by Teletronics this past Spring. Sales and merchandising methods and plant operation techniques are the themes of this new 20 program series.

Designed to increase productivity in sales and operations, the industrial educational package utilizes color television receivers coupled to Sony U-Matic videocassette players as well as work books and an audio tape player.

Effective Communications Center Established by 3M

A new center that provides the facilities and staff for solving communications and instructional problems has been announced by B. Y. Auger, general manager of 3M Company's Visual Products division.

Called the "Effective Communications and Learning Center," the facility is designed to provide practical methods for attaining a broad range of educational and training goals. Seminar subjects are individually tailored to answer specific needs.

Located in the heart of the division's research and development area in St. Paul, Minn., the center features a professional staff; nationally-recognized advisory consultants; "hands on" atmosphere; a workshop laboratory; comprehensive programs, and the resources for emphasizing either individualized instruction or effective group communication.

E. R. Murkland, Film Writer, Succumbs

E. R. Murkland, 53, writer of industrial films, died of cancer September 3 at Waterbury, Conn., Hospital.

During his career, Mr. Murkland wrote many films for the nation's leading corporations. In recent years he wrote major product introduction shows for Lincoln, Mercury, Ford, Chrysler and Volkswagen, among others.

During World War II he served with the U.S. Army Signal Corps as a

Eight "Best of U.S." Industrial Films to Compete at Amsterdam

Just eight business-sponsored motion pictures will compete for the United States at the 13th International Industrial Film Festival when that world showcase is held at Amsterdam, Holland November 20-24th.

The eight U.S. entries were selected on behalf of the National Association of Manufacturers by a special committee of the Council on International Nontheatrical Events. Five other selections made by the committee were withdrawn when their sponsors failed to come up with the Festival's steep entry fee of \$141.08 plus the usual CINE handling charge of \$35. Each principal country participating at Amsterdam was allowed to enter a maximum of 15 films in all of the Festival's seven categories.

According to Anita S. Price, CINE managing director, the U.S. will still compete in six categories, with no entries for Category D which includes films about specific industrial subjects, products or materials, intended primarily for specialist audiences. Descriptions of the eight "best of U.S." industrial subjects competing at Amsterdam are listed according to category:

Category A: Films about industrial questions (economic, social, technical or scientific) of general interest and intended for showing primarily to the general public.

The Great Sea Farm (25 min., color, 16mm). Farming the sea is rising as industry shows what is being done to develop mariculture techniques. **Sponsor:** Motorola Systems, Inc. Released August, 1971.

Category B: Films about special industrial realizations, products or materials intended for showing primarily to the general public.

Ohio (8½ min., color, 16mm). The state's Governor J. J. Gilligan talks of Ohio and Ohioans, their remarkable accomplishments and the promise of the future.

Sponsor: Ohio Bell Telephone Co. Re-

leased June, 1971.

Category C: Films aiming less at information than do the films in Categories A & B but which have the purpose of contributing to the prestige of the industry concerned or a firm, intended primarily for the general public.

Honda Hawk: Chapter One (13 min., color, 16mm). Sequences follow the Honda Hawk (a super-streamlined land-speed record motorcycle) from its design inception through construction to its record-breaking 289.9 mph run on the Bonneville Salt Flats in Utah.

Sponsor: Honda (through Grey Advertising, Inc., Los Angeles). Released January, 1972.

Category E: Films on scientific principles and research with industrial application and intended primarily for special audiences (including educational establishments).

The Changing Cowboy (29 min., color, 16mm). Shows the superiority of the Hereford breed of beef cattle, how it has changed and how the breed has changed the cowboy from a range rider working herds of scrawny longhorns to that of a businessman who keeps accurate breeding records.

Sponsor: American Hereford Assn., (through Fred A. Niles Communications Center, Inc.). Released: December, 1971.

Category F: Films used for management and manpower training (for example, management methods, measures for increasing productivity, etc.) intended rather for an industrial audience than for the general public.

Gin in January (10 min., color, 16mm). How to increase liquor sales in January, traditionally a slow period? Seagram's proposal: to promote the sale of "Gin in January" and thereby level the company's production curve and promote employment. **Sponsor:** Seagram's (through Turtle

Bay Communications, Inc.) Released January, 1971.

Category G: Films on accident prevention, occupational diseases, health, re-education and measures of social security, intended for an industrial audience, rather than for the general public.

Bomb Threat: Plan, Don't Panic (14:27 min., color, 16mm). The film shows effective handling of the threat call, planning and bomb search follow-through with rank-and-file employees in action, rather than management, thus gaining their interest and cooperation. Part of a complete bomb threat security program.

Sponsor: William Brose Products. Released September, 1971.

Motorcycle Driving Tactics (15 min., color, 16mm). Pointers for motorcyclists, involving excesses of speed, limitations of the machines, conspicuousness of the autoist, etc., using test footage from UCLA Traffic Safety Institute.

Sponsor: Charles Cahill & Assoc. Released: January, 1972.

Comments on Festival Competition

Notably absent from the U.S. entries in 1972 are any 35mm prints and in past years this has weighed heavily against entrants limited to 16mm due primarily to Europe's traditional use of excellent theatre-type projection and larger halls for the 35mm films submitted.

Still, the U.S. has done well enough at these events, capturing a Grand Prix and a First Prize last year when the Festival was held in Barcelona and that winner was a 16mm print subject.

The Festival at Amsterdam, coming as it does immediately preceding the traditional Thanksgiving Day holiday in the U.S., is not likely to attract a sizeable U.S. delegation in 1972. Add to that limiting factor the late November dates (November 20-24) when Amsterdam's canals are beginning to take on an icy sheen, we predict that the holiday, the weather, present corporate economics and the limited total U.S. entries will limit participation more than usual.

But the International Industrial Film Festivals remain the premier events of their kind on the world scene: Europe's gracious hospitality to its overseas and neighboring states

Start with this little box

and sock your sales message home with the Big Picture.

Whether you're planning to deliver a presentation to five or 500... this great little portable motion picture projector does a great big selling job!

This new MPO Compact Videotronic Super 8 has all the quality, features and compactness you'd want in an automatic projector. Only more!

- It's lighter. Only 15 pounds. Easier to travel with.
- It's more compact... measures only 14½ x 10½ x 5½" wide. Needs less set-up space. Smaller than a typical attache case.
- It's versatile. Has its own built-in screen or can project on a wall or screen for a big audience.
- It shows a faithful, sharp, color picture and cleaner, warm transistorized sound.
- Uses interchangeable cartridges, continuous rewinding. Always ready to go. Travels with cartridge in position.

And no one else can offer all these exciting features!

Let us show you our "little box".

It'll be a big surprise!

Full one year guarantee on parts and labor (8 months longer than competitors guarantees.) And we have full projector and film service all across the U.S., Canada and Europe. We can convert to Super 8 sound film from 35, 16, or other Super 8 sound film from 35, 16, or others, your own Super 8 film... or from video tapes.

Thousands of the most important (large and small) U.S. and international companies use Videotronic projectors. If you need further convincing, ask for a list of users. Check any or all of them—the Videotronic is the best performing automatic self-contained projector on the market.

For Sale or Lease: You can buy the MPO Videotronic Compact outright or lease them on short or long term lease or lease-purchase plan.

MPO Videotronic Projector Corp. 30-11
Division of Optico, Inc.
305 East 46th Street
New York, New York 10017

I'd like to see your surprise. Please arrange for a demonstration of your new Compact Videotronic projector.

guests, the presence at these Festivals of a great many of Europe's leading sponsor executives from both industry and government and, of course, Holland's own pre-eminence in the field of industrial film production should all contribute to an extremely worthwhile experience for those fortunate (and brave) enough to make that scene come November 20th.

It must be noted here that the Festival, unlike most U.S. events, is officially sponsored by the Council of European Industrial Federations and the event at Amsterdam is held in cooperation with the Federation of Netherlands Industry, joined by the Netherlands Association of Christian Employers and the Dutch Cinematographic Association. In other words, this competition is primarily sponsored by those who buy and use the medium.

Communication Experts Belong on the Company Executive Team

SHAREHOLDERS will be comforted to note that the growing majority of chief executive officers of leading American business companies have come up out of the ranks of finance, legal and purchasing departments, with a goodly number of engineers now at the helm. That's good from the view-

point of profits that make jobs, pay taxes and help insure economic health.

Meanwhile, out in the real world where markets are threatened by social-boycotts, balance sheets affected by pollution-control costs, defense minimized to help pay for welfare hand-outs *sans job requirements*, today's hard-won black ink can turn to red all too easily when both publics and employees are lead into ignorance and misunderstanding by demagogues of both labor and politics.

Our point: every corporate president's "cabinet" had better have a very capable, active and strong communications officer. The V.P. for Public Relations and the V.P. for Employee Relations are the two men *you must have* on your team. Mr. President.

Aetna Produced 155 Videotapes

Aetna Life & Casualty reports that by the end of 1971, 91 major videotape programs (on work methods and procedures, company policy, loss control and claim information) *plus* 64 role-playing sessions had been shown to employees and agents in the company's home and branch offices. Videotape is a great internal tool; it's too early as yet to tell you that there are enough playback machines to warrant external distribution but it's coming on . . .

50.4 Million in U.S. Schools Despite Decline in Birthrate

The U.S. birthrate has declined the past two years until it's now below the rate of replacement; the country's school population which peaked in 1971 at 51.4 million has dropped (in both elementary and secondary education) to about 50.4 million, down about 1 million pupils.

Population of oldsters continues to rise. Far-sighted marketers like Johnson & Johnson are showing t.v. commercials with adults using that company's Baby Powder. The whole trend in population shifts is affecting social values, life styles, etc.

But remember that today's youth population remains very sizeable and extremely vocal, thoughtful and moving to adulthood.

All of which is noted simply to remind you that no film-minded man can help his clients without knowing the statistics.

Urban Inns Offer New Showcases

And speaking of statistics, national film distributors have long been active in getting sponsored films into key resort areas. Now the major metropolitan hotel and motel chains are experimenting widely with closed-circuit hookups to show entertainment films. The same channels are available to them and other sponsors to reach travel-minded viewers with hefty incomes for a lot of other products and services. In Manhattan you can see a movie in your room at the St. Regis, Plaza and other hotels; Holiday Inns are trying the idea in Little Rock and Toronto; the prestige Regency-Hyatt in Atlanta is another showcase.

Catch 'em at airports or when they land to bed down. But catch 'em with films that supplement entertainment fare!

Corporate-Sponsored Films Can Earn Profits and Win Goodwill

The recent entry of corporate industry into entertainment and TV filmmaking ventures strikes us as missing a much more relevant target.

Since these fund allocations are being made to earn profits and benefit shareholders, let's take a fresh look at *other kinds of films* that can clearly accomplish the same ends and, at the same time, help serve *direct concerns* of a great many potential industrial sponsors of *non-theatrical* films.

For the benefit of finance-oriented management, consider the constant profits derived from film sales and rentals by such firms as Dartnell, among the leading producers of sales

Berkey Manhattan Slides
sparkling quality/super service

SLIDES.
 There's good reason why Berkey Manhattan is the leading slide producer in the East. It's our specialty. That means we know every trick in the book to turn out beautiful, sparkling color slides. It's standard operating procedure to color correct and inspect every slide we make. Beauty is important. But a beautiful job delivered late is hell. So we're geared for speed and quality. Berkey Manhattan offers the fastest service, often, the very same day. And all of this costs no more. Perhaps even less than you are now paying. So talk to Berkey Manhattan—the slide people. Find out how and why we turn out the finest quality slides—on time.

BERKEY

training motion pictures. Consider the practically ageless basic films on electricity and electronics created years ago by Disney for General Electric. All kinds of series of similar films have proven their value through residual earnings, long-life interest and direct contributions to educational values relevant to their sponsor's interest.

The ingredients for success in this area of production are clearly defined:

First: subject-matter relevant to the company's needs: sales training, updated to recent market, ecological, social trends, etc. offers boundless opportunities; service education, where new principles of mechanics, pollution designs are evident but also basic knowledge of vocational material: i.e. machines, fluids, welding, etc. This area of relevance extends to such concerns as life-prolonging guidance benefiting insurance companies, etc.

An entire column could be filled with subject-opportunities gleaned from the daily and weekly news-media. A Metropolitan Life booklet discusses "Day Care: What and Why?" Day-care centers are vital to the five million children under age six whose mothers hold jobs; they would be good for millions of others, especially in crowded urban areas. Where's the film?

Secondly: where's the profit, aside from having already served an obvious corporate-centered need? Easy: nobody expects you to give that film away: make it good enough to deserve print purchase and you'll sell copies by the thousands or lease them to film libraries, schools, etc. Videotape on the rise? Transfers-to-tape are the way to go, if and when.

We're confident that good thinkers within marketing, public and industrial relations operations can pinpoint innumerable film opportunities. If the company has an audiovisual communications' setup, consult the man in charge. Here are some of the many "cues" to help start that thinking process and then we'll enlarge on how to get a good, useful new film to markets(s):

Workers as well as potential workers in schools and colleges need to have positive information on productivity: the nation's key to a sound economy. "When productivity lags or fails to keep pace with cost increases, such as higher wages, prices go up."

America seems to be surfeited with radical thinking. Radicals of the past, dealing with true shortcomings of our industrial system, contributed mightily to righting obvious wrongs. What progressive company is ready to help sort out America's present short-

REVIEWS AND PREVIEWS OF NEW VISUALS

Navy's New Film Shows the Human Side of Annapolis

The U.S. Navy's Office of Information has a new film with a new Navy look. It's a fascinating non-linear overview of the life of an Annapolis midshipman that is intended to open some interested eyes among audiences of high school people.

Not in the way it used to be done: *48 Hours in the Life of a Midshipman*, or three reels of *Plebe to Graduate*—that sort of thing. The new *Annapolis* is a verité look at the academy almost in the manner of "warts and all." Not surprisingly Annapolis comes through as a place, and a life, and a corps of very human people with great appeal.

As the camera and mike poke around the halls and look in the doors, we can catch drifts of conversation such as:

"It's immoral, it's immoral to kill. It's immoral to take somebody else's life, no matter what. You gotta use that assumption."

"I tell the guy he won't like it here and you just *can't* like it here unless you really want it, unless you can see what you're getting out of it. I think the guy that comes here just wanting a free education will leave in about two weeks. Same with the guy who just comes here to get out of the draft. I've never heard anything as ridiculous as coming here to get out of the draft."

Producer-director Joe Dunford with Midshipman R. B. Staton during production of U.S. Navy film, "Annapolis."

"Here we've gone from a strictly, a very strictly, structured curriculum designed to produce professional naval officers to a very flexible curriculum in which, personally, I think the academics has been overemphasized."

"What the Navy needs is engineers, not poets."

"I think the whole spirit and mood of the Academy has grown more relaxed in recent years in terms of allowing them to indulge in certainly the extracurricular activities that would be found in almost any other campus."

"There's a tremendous amount of fun associated with being a member of the brigade, a lot more so than people like to admit, and I think most of 'em realize it when it's just about over. You know, it grabs you after four years. After so much sweat and hard work and it's good-bye."

Annapolis' interplay of ideas is presented by cadets themselves as the camera looks at the parade grounds, classrooms, athletic fields, barracks and boats of the academy. The 27½-minute film was produced for the Navy by Pelican Films, of New York, and directed by Joe Dunford.

A Long Day's Work on the CINE Jury

Serving on a semi-final jury in September organized by CINE (Council on International Nontheatrical Events) to select films for overseas film festivals, I was much impressed by the general good quality of films submitted. Other members of the Business Screen staff and I have been serving on these juries for a number of years. We have seen years when film after film has been of such high quality that it has been difficult to pick the outstanding ones from the merely good. On other occasions, notably such as last Spring, entries were disappointing and not up to the standards set in previous years.

This Fall in New York, our jury, composed of industrial audio-visual and film production executives, looked at 16 films which had been approved and sent on by regional juries to our group in New York. Most of them were worthy of some honors, and it was not an easy task to pass on our selected nominations for the CINE Golden Eagles which will be awarded after screenings by final reviewing juries in Washington.

I'd like to note some of my personal reactions to the films we looked at, with a reminder that this does not speak for the opinions of my fellow jurors, which not always coincided with mine.

Paper, the Prologue produced by Morton Goldsholl Associates for the American Paper Institute, showed signs of this producer's traditional attention to good design and production values. But I thought it took overlong to get anywhere. Long montages of the history of paper, and paper-making scenes, while handsome to look at, failed to tell me anything particularly interesting. Music was good, but the overall effect was tiresome.

I'm sorry I don't have all the production details about the next film, which was actually one of the best I saw all day. Can you imagine a 16-minute film about nothing but a dented bumper being hammered out? That's what it was, and it was beautiful. Sponsored by an association of Bumper Replacement Manufacturers, and produced by Melvin Sloan, of Van Nuys, California, the film was simple, beautifully photographed, well organized, word-less, but it seemed to sell everyone on the jury that reconstructed bumpers are a worthy product, that the men who perform this work are craftsmen of the first order, and that frugality has not completely disappeared from the automotive world. The film is aimed at insurance adjusters and body shop owners. I'd recommend it to almost anyone who wants to see an honestly good motion picture.

The next film up was 100% commercial, 100% product minded. But it was so beautifully photographed that I could have looked at it several times through with enjoyment. Called *Silverline*, it's about the line of fiber glass boats made by the Silverline Company, of Moorhead, Minnesota, and was produced, according to the entry blank on the film, by the in-house production unit, which must be a thoroughly professional outfit. The film is full of well-thought out camera placements and beautifully smooth moves, but the script is pedestrian, containing little beyond one plug after another for Silverline.

The University of Denver's Department of Mass Communications sent us the next film, *A Short History*, which demonstrates in live action and animation, that alcohol distorts perception. Clever and funny. I didn't quite get the ending. Stan Phillips & Associates, of Denver, made it.

Instead of trying to be
good at everything...

we prefer to specialize...and be **BEST!**

A "one-man band" is fun to watch. He's adept at handling many instruments, but he can't possibly match the great technical skill of a trained soloist.

If you want flawless performance, select a specialist.

Here, at Frank Holmes Laboratories, we have specialized in filmstrips and color slide duplicates since 1948. They're not a "side line" with us. They're our only business.

When you've concentrated on doing something well . . . and spent 24 years at it . . . you're likely to do it very well indeed. And we do.

We routinely handle problems often considered insoluble.

We have designed much of our own equipment . . . developed an exacting control procedure . . . and instilled in every department an outstanding enthusiasm for perfection.

Our promise to you: No matter what your material is, we can do more with it — and get more out of it — than anyone else.

The reason is simple enough. After all, no other lab in the world knows as much about processing filmstrips and color slide duplicates as we do. Or cares as much.

Write today for our new free catalog!

**FRANK HOLMES
LABORATORIES, INC.**

1947 First Street • San Fernando, Calif. 91340 • (213) 365-4501

Sea Venture, made for Standard Oil Co. (NJ) by Quest Productions, struck me as unctuous, pretentious and a bore. It's about Standard's need to hunt for oil in the sea, and what they are doing to prevent exploration and drilling from damaging the environment. I'm inclined to agree with their point of view, but they made the point much more significantly in another film, also submitted to the jury, called *The Challenge of Santa Barbara*.

This picture, which documents the pros and cons of pumping oil from rigs in the Santa Barbara channel off the coast of Southern California is a pretty honest attempt at objectivity in the controversy of whether the oil companies should be there or not. The Chamber of Commerce types are all for it and the ecology-at-all-costs people are against it. Both sides have their say. As I said, it seemed to be fair to both sides, but I noticed that the pro-oil people selected to present their viewpoints looked, let's say, a little more respectable and presentable than the ecologists, but perhaps that is carping. What are they supposed to do? Favor the other guys? The film was made by World Wide Video Associates. OK.

Think of It as Money never seemed to get off the ground. It's supposed to provide a better understanding of the

bank card industry, and if you can stay awake through it all, I guess it does. It was sponsored by National Bank Americard, Inc. and produced by Keith Merrill Associates.

It's hard to judge a nuts-and bolts picture against another which has pretensions to, and often succeeds in achieving, cinema artistry. Nevertheless that is what film competition juries are expected to do. We came up next to a safety film called *Getting Off on the Right Foot*. I can't think of any more effective way that could be devised to teach railroad men how to get on and off moving railroad cars than this. A straightforward good job. Union Pacific sponsored it.

The mellifluous voice of Orson Welles supplies an off-screen narration to *Gentle Giants*, which is part of the continuing public relations project of Anheuser Busch with its Clydesdale horse symbol. The film, made by MPO Productions, documents the history of the breed and tells how they have come to be associated with the big brewing company all these years. Very low-sell, very pleasant film. Doubly so if you like horses. Some of the jurors got to wondering what it cost. Nobody had any inside information, but a consensus of our guesses was something like \$100,000. It's the kind of film that looks like \$100,000.

Firefighters on the Move, made for the San Diego Fire Department by Copley Productions, seemed to be a workmanlike job. Pictures showed the firefighters going about their work with lots of impressive new equipment. It didn't seem to stir up enough of my enthusiasm to vote for it, but I could see nothing distressful about it, either.

The Insurance Company of North America entered *To Better World Trade*, produced by Fred Niles Communications Center, in the competition. It reviews maritime shipping problems, points out new solutions. I can't remember very much about it writing a day later, but my notes say "well done." Should this tell me something?

Welcome Aboard, a non-business sponsored training film made by Roundtable Productions, is designed to illustrate the problems faced by the new employee and suggests that there are better ways to get him started than just to clap him on the back and let him find his own way. This was one of the very few films I have seen in business and industry judging for several years that has a "plot." The plotless movie has taken over, I suppose, because it's hard to develop a dramatic theme on an industrial subject in a short film without having it seem corny or soap-opera-ish. I thought

the new 16/16 interlock that's built to serve you better...

NEW!

- ☐ Release-Latch adjusts sync between picture and track without unthreading film.
- ☐ Built-in Synchronous Motor Drive for pilotone transfers and precise sound speed.
- ☐ Elapsed-Time Meter for monitoring lamp life, head wear and machine maintenance.
- ☐ Quick plug-in magnetic head assemblies for maximum on-the-spot versatility.
- ☐ Separate playback heads for monitoring directly off the track.
- ☐ Outlet for remote control cable.

SONOREX 16/16

We've listed just a sampling of the important new features of the Sonorex 16/16 Interlock Sound Projector. They are representative of dozens of improvements and new facilities that make 16/16 sound projection better than ever.

Use it for: Single and/or double system sound projection; optical playback; magnetic record and playback; mix, transfer and re-record — Sonorex is the one that does it all — and does it all better. Sold and serviced by the company that pioneered portable 16/16 interlock sound projectors in the USA. At authorized dealers.

Write for literature

ARRIFLEX
COMPANY OF AMERICA

P. O. Box 1050, Woodside, N. Y. 11377

Welcome Aboard sustained its interest all the way through, and that's what it's supposed to do.

The Oppenheimer Funds entered a modern-paced, often funny film called *Time of Your Life*, produced by Wylde Films. It's designed to encourage investment in mutual funds. Most of the jury seemed to think it was a winner.

Ecology is the name of the game for a great many new PR films. The American Iron & Steel Institute weighed in to our competition with *Work in Progress*, produced by Cinecraft, of Cleveland. It reminded us that the steel industry is now cleaning up the waters, cleaning up the air. Surely true, but this film is easy to forget.

Our business and industry jury doesn't get to see very many union films. Few have been entered over the years. This year we got *A Union at Work*, produced for District Council 37 of the Municipal Workers by Amram Nowak Productions. I thought it was quite well done—the camera and mike go out into the streets, hospitals, police stations, etc., to show DC-37 people at work—in places with bad light and lots of noise. It looked very much *alive* to me. I voted for it, but I don't think many of my fellow jurors agreed with me.

Finally, *Yours to Explore*, sponsored by Chevrolet and produced by Sunset Films, was dedicated to our National Parks and proposed that the best way to see them is via a recreational vehicle. It seemed like a doubtful proposition to me at a time when serious ecologists are suggesting that the best way to save our National Parks from destruction caused by too much traffic is to ban all vehicles, and particularly camping vehicles. However, the film was well made. Most of us gave it a vote.

All in all, this Fall's entries indicated that sponsors and producers are once again putting out a much better than average product. The films I saw were generally informative, entertaining, and a credit to American industry. They should do very well in overseas film festivals.

Bob Seymour

Unique People-to-People Project Documented

A professor of English from Stanford University, an art historian from Texas, an actor/professor from San Francisco and a folksinger/actress from New Jersey journey across America "to bring the humanities to the people."

What happens when this team of young humanists confront the people of a small farming community in South Dakota is documented in a new

28 minute color motion picture produced by Cinemakers, Inc. of New York City for The Woodrow Wilson National Fellowship Foundation.

Time Out for Man is both the title of the film and the overall title for the series of adult-education programs created by The National Humanities Series, which is produced by The Woodrow Wilson National Fellowship Foundation under a grant from The National Endowment for the Humanities.

The film was shot and recorded entirely on location in Webster, South Dakota during four days in December, 1970, and in Princeton, New Jersey

one day the following January. It begins with a performance of black poet James Weldon Johnson's "The Creation", by Nat Simmons, a young black actor, which leads into a brief explanation of The National Humanities Series by Dr. Hans Rosenhaupt, President of the Woodrow Wilson Foundation and Bill Fegan, outgoing Director of The National Humanities Series.

Most of the film is devoted to the documentation of one Series team's visit to Webster, South Dakota, filmed and recorded exactly as it happened. The camera and microphone watch and listen as the four humanists talk,

Now...shoot and show any time, any place, any way.

Projection scene simulated.

That's what the promise of super 8 is all about. From the first. And now Kodak delivers again on that promise with the new KODAK SUPERMATIC 60 Sound Projector.

Use it by itself or with our newest cameras and film to realize the promise of super 8. For showing. For filming. **The projector.** Drop a cartridge in. Touch the single control lever. You're looking at a full-color movie in seconds. With sound. With the room lights on. Projected on a sharp, brilliant, small screen. As many as 29 minutes of uninterrupted viewing.

Another touch of the lever lets you give "instant replays" of any scene. Or rewind the entire reel in seconds.

Flip down the built-in screen. Adjust the projection mirror. You're immediately ready to project again on your room-size screen. Five-watt solid-state power for clean, crisp sound. Plus an external connection for earphones or extension speakers.

And it's all portable. Self-contained.

The KODAK Projection Cartridge. Accepts any standard magnetic sound or silent super 8 film you have. Past. Present. To come. Professionally produced stock or custom-made films. Or do-it-yourself films shot by your staff.

Simple. All it does is hold the film. Inexpensive. You open the cartridge without tools. To clean your film. Edit it. Update it. Change it.

Camera and film. Put KODAK EKTACHROME EF Film 242 (Tungsten) in one of the new KODAK XL Movie Cameras, and you can take full-color movies in the office or on the plant floor by the light that's there. *Without movie lights.* Even move outdoors with the same camera and film.

Lightweight. Manageable. Anyone on your staff can make film reports. In-plant documentaries. Training films. Same-day or 24-hour processing is available in most areas.

And what you shoot can be shown on the same KODAK SUPERMATIC 60 Sound Projector you use for showing professionally produced films.

There's much more to the promise of super 8. For all the facts on how to make full use of super 8 and its dollar-and-cents economies, contact the nearest dealer who carries Kodak professional audiovisual products. He's listed in the Yellow Pages under "Audiovisual Equipment and Supplies." Or mail the coupon.

KODAK SUPERMATIC 60 Sound Projector. **Puts the promise of super 8 to work for you—today.**

- ☐ Please send me more information on how Kodak super 8 equipment delivers on the promise of super 8.
- ☐ Please have a dealer contact me.

sing, dance, and discuss the humanities with the people of Webster. Beyond recording the specific events, the camera captures the spontaneous interaction of two groups of people as they discover their common humanity and grow to understand, respect, learn from, and love one another.

The primary purpose of the film is to show communities that are interested in participating in The National Humanities Series what it's like to be a Series' town, and to show the kind of things that happen during a team's visit. The film will also be used to help raise additional funds to keep the Series going and to expand its programs. And a new purpose has emerged since the completion of the film: to show as many people as possible that, for all their diversity, Americans are capable of, and anxious to explore their common humanity.

Shooting on the Dead, the Red and the Med

Walter J. Klein Company, Ltd., producer of sponsored films in Charlotte, North Carolina, has released "*The Garden of God*" the first motion picture ever made showing the flowers,

plants and trees of the Bible.

The picture is the result of a springtime spent in Israel documenting rare and beautiful botanical specimens that experts have identified with specific Old and New Testament passages. It is to be used by the Charlotte Biblical Garden, a unique public park, to raise improvement funds for its displays of Biblical flowers. Walter Klein, president of the production house, is also the elected head of the Garden.

Four actors costumed in Biblical garb were often stopped by Easter-Passover tourists to find out what "order they belonged to." The crew shot in swamps, nature preserves, desert, and at all the seas: Dead, Red and Med. Asaria Alon and other famed naturalists confirmed identification of all plants shown in the film, many of which have been subject to interpretation for centuries.

Film Interweaves History of Surgery with Open Heart Operation

A new motion picture which interweaves the history of surgery, anesthesiology and anatomy around a present-day open heart operation has been produced for Parke, Davis & Company, a subsidiary of Warner-Lambert Company.

Entitled *The Heritage of Operating Room D*, the 27½ minute film tells

the story of three-year-old Lynda's successful surgery in which a hole in the heart area is repaired with a Teflon patch.

Narrated by stage and screen star Jose Ferrer, the drama is played out in the present, but "peopled" with characters from the past whose medical triumphs made possible Lynda's operation.

The Heritage of Operating Room D, which will be available through Modern Talking Picture Service, was produced by Medical Vistas, and written and directed by Al Wasserman, of New York.

Basic Training Course for Supervisors

The Supervisor In Action, a new series of training films for supervisors, deals with the fundamental skills of analysis, planning, evaluation, motivation, and cost control. This introductory series, which provides six hours of training in three sessions, includes three 16mm color films produced in England by Rank Audio Visual Ltd. Each film is accompanied by two case studies calling for dynamic participation by the trainees. Leader's Guides help the course director to introduce the films and lead the discussion. The series is available from Roundtable Films of Beverly Hills, California.

Included in this basic course for supervisors, *A Matter of Method* illustrates the importance of analysis, planning and evaluation. *Value for Money*, which is designed to instill cost consciousness, emphasizes how supervisors can reduce and control costs in the areas of time, manpower, materials and machines. *The Will To Work* stresses the importance of good human relationships, the social forces of group activity, and effective communication. It makes the point that motivation requires more than money and security.

Canadian Cable TV Produces Sponsored Documentary for Cable Outlets

Grand River Cable TV Ltd., which broadcasts on Community Channel 12 in Kitchener, Ontario, has taken its first step into the documentary field as a production company, according to David Battle, producer/director.

PUT IT ALL TOGETHER WITH

MediaTrol

SINGLE REMOTE PANEL CONTROLS MULTIPLE AV MACHINES

Now you can connect and operate by remote control a number of audiovisual machines—Two Ektagraphic projectors, 16mm or 8mm film projector, videotape, cassette or reel-to-reel audio tape recorder and accessories such as lighting, loudspeaker, drapes screens, etc.

MediaTrol simplifies projector and equipment control in offices, classrooms, lecture halls, training centers, conference rooms. Designed for portable as well as semi-permanent installations, MediaTrol eliminates the need for costly electrical installations. Equipment control cords plug directly into the rear of the central control panel. One power cord plugs into a conventional outlet.

The MediaTrol system includes remote control panel priced at \$1595, central control panel at \$395. Accessory cords and equipment also available. For specific information including catalog and price list, phone or write Ms. Connie Buchanan, Tel-Com, Inc., 1475 E. Henrietta Rd., Rochester, N.Y. 14623. AC 11-442 1900

"We have just completed a half-hour documentary program on Oktoberfest for K-W Oktoberfest Inc., and have begun distribution to cable television systems in major population centers across Canada and in the northern and eastern United States," he said.

The program will mark the first time that major distribution in Canada and the United States has been attempted by a Canadian cable television company. There are a total of 361 cable outlets in Canada from coast to coast.

To produce the documentary, Grand River Cable TV integrated 16 mm. film footage, slides, an audio-visual package and videotape from a studio, set up to re-create the Oktoberfest beerhall atmosphere.

"The total package involved a considerable amount of precise editing," Mr. Battle said, "and all of it was handled on our equipment here."

The program, which runs exactly 29 minutes, 30 seconds, has been dubbed onto videotape of 1" IVC, Ampex, Sony 1/2" and Sony 1" sizes for distribution to outlets using this equipment.

Underwater with the Commerce Department Aquanauts

FLARE (Florida Aquanaut Research Expedition), a new 14-minute film released by the Commerce Department's National Oceanic and Atmospheric Administration shows how teams of scientists, using a mobile habitat, remained underwater for about five days each to study the coral reef environment off the Florida coast near Miami. Each team had a specific scientific objective. The missions included studies of the health, geology, and the plants and animals of the reef. An artificial reef made up of 600 rubber tires was also studied.

Produced for NOAA's Manned Undersea Science and Technology program, the motion picture was produced by Elliot A. Macklow, Chief of the Motion Picture Service, using the facilities of Creative Arts Studios of Washington, D.C. Photography was by William "Smokey" Roberts of Lancaster, Pennsylvania, with the technical assistance of Dr. Robert Dill of the MUS&T staff of NOAA.

Farm Supply Dealers Study Psychology via Film

What do you think they're teaching farm supply dealers these days? Psychology, no less. Times were when all a fertilizer salesman needed was a folksy manner and a little gumption. Not any more. Not according to a new series of films recently introduced to

PARADOX: Just because you have to fight to survive doesn't necessarily mean you're in a jungle.

When I'm talking with producers I sometimes hear criticism about this magazine. Ordinarily, the producer thinks he's saying something very perceptive and original, although in fact I hear the same tired lines over and over again. When I started to write this paragraph I thought I would repeat the specific criticisms just to prove that they were very commonplace, but then I decided not to give the critics the value of the publicity and the Hell with it. But much of it can be capsulized in the criticism leveled at all business magazines nowadays; they're not as *hefty* as they used to be. They are economizing just as the industrial film producer has been forced to economize. And isn't that a shame!

The conversation usually comes to a close when I ask the producer if he happens to have the last Production Review, and when he hands it to me, I always ask one question . . . "What would you do without this issue?"

The fact of the matter is that although there are many problems in our industry, the one over-riding problem that *must* be solved for any producer determined to stay in business is the problem of sales. And, within the general problem of sales there is the specific problem of identifying the prospect. *The hardest single*

thing to find out in this industry is the identity of a person authorized to produce a film, and equipped by budget to do so. After you find out who he is, you may still not get the job, but unless you do find out who he is to start with, you won't even get the chance not to get the job.

And I can *prove* from personal experience, both my own and that of several producers, that when a sponsor is looking for a new film producer, one of his techniques is to check the producer's credits listed in the most recent BUSINESS SCREEN ANNUAL PRODUCTION REVIEW.

I personally know a few very successful producers who now refuse to have their production credits listed in the Annual Production Review because when *they* went into business they built up their initial client list by using the credits in this magazine to identify their prospects. But although the magazine was so helpful to them when they started, they now criticize it because they're scared that anyone peeking over their shoulders will steal their marbles. This is pretty silly. If you're a successful producer, with demonstrably impressive clients, it can only help you to let it be known.

In addition to sales problems, another big problem in our industry is its fragmentation. There's just no communication, almost no communication media, between producers, writers, art directors, designers, laboratories, and so forth. In fact, about the only time we communicate with each other is when we have something abrasive to say. But if you want to know what's going on in the industry, generally, or if you want to make an announcement to your peers, colleagues, and competitors . . . where do you turn? I think we all know the answer. Most of us turn to BUSINESS SCREEN.

Very few magazines have it easy these days in economic terms. Think for a moment of the magazines that have gone out of business recently, both trade and consumer books. But the fact is that our particular magazine is edited by people in close touch with the industry, it devotes itself almost exclusively to the business sponsored film, and in every case is deeply involved with the major forces affecting the business film industry.

I was a little fearful of writing this column because I am sensitive to the

accusation of toadying to the management, ('brown-nosing' to you illiterates, sycophantic to you intellectuals,) but I finally decided that my friends know me too well for that, and I don't care about the others. Furthermore, anyone who reads the column is by definition a friend, although I've never met him (or her) in person.

I don't mean to sound like an apologist for this magazine as it relates to the audience I think of as I write this column—the industrial film producer. Every magazine including this one can be improved. But I also find that when I ask our critics for specific suggestions on how and what to do to make the book more useful to its regular readers, most of whom are in industrial audio-visual management—film buyers, we seem to enter an area of silence and no-man's land. Frankly, every time I have ever made a suggestion to the editors for inclusion of some kind of feature or news story or editorial concept, there has always been good response. Not every idea can become a part of the magazine instantly, for many different reasons, but at least the publishers and editors are always eager to listen to any ideas on how to improve the publication, and they've spent many dollars and many hours checking out every suggestion made. The problem is . . . it's much easier to criticize in vague general terms, than it is to suggest specific, definite improvements.

I think I have, by now, a good deal of influence with the management of BUSINESS SCREEN. I would be delighted to put every worthwhile suggestion you have before our editorial board. If it's something good, you'll soon see it here, and I'd be very happy to hear from you anyway, whether it's good news or bad.

If you take an Annual Production Review of ten years ago and compare it with this issue, you will find this issue, in every single department, livelier, more informative, more comprehensive, more alertly close to the entire sponsored film industry, than the issue of ten years ago. I feel free to say that because I have a ten year old issue before me as I write this column.

In the effort to soften the blow, my friends sometimes follow their criticisms up by immediately telling me that my column is the best thing in

BY HUBERT WILKE

Management Techniques in Improving Media Software by Matthew P. Murgio

Last May we were privileged to provide the keynote address to the Industrial Audio-Visual Association convention at Lake of the Ozarks, Missouri. The theme of our message, *Software—Stairway to the Executive Suite*, was an attempt to stress the importance of creative programming and effective graphics, i.e.—all of the non-hardware elements that must provide the springboard to a well-rounded a/v program.

A wise and dear friend put it all on the line ever so succinctly when he said "the trouble today is that we have altogether too many machines that have absolutely nothing whatever to say!"

Matt Murgio, Senior Associate of our Programming Service Division, and author of the book *Communication Graphics* (Van Nostrand Reinhold) exposes only the tips of the iceberg in the comments that follow. For those of you who wish to delve below the surface of communications graphics, we heartily recommend his book. For now, however, we believe you'll be intrigued by his development of a communications audit.

H. W.

Much was promised and expected for audiovisual development in the past decade. Indeed we have seen many significant developments. Electronics, for one, have made possible startling new advances in visual communications technology. Also, while perhaps not as dramatic, improvements in projectors, screens and production materials have made very definite contributions in up-grading audiovisual presentations.

And yet, managers of all types, have by no means fully availed themselves of these communication tools in direct support of their management functions. Many reasons are advanced for this lack of utilization. But none is so conspicuous as the one that underlies almost all user disenchantment—no matter what the audiovisual purpose a presentation is meant to serve. And that reason is either the inadequacy, or cost of media software.

Encompassed by the term media software are the concept and design of visualization, the methods and techniques of production, the selection of media and the development of systems and procedures necessary to maintain an effective and efficient graphic communications operation.

One of the first steps in improving media software is to identify areas of inadequacy and, within those areas, to isolate the specific roots of deficiency. To accomplish this, a thorough-going diagnostic type study is needed—one patterned after the "management audit" which, for years, has been successfully used in optimizing performance of business operations. In the audiovisual field, therefore, a comparable study is called a *communications audit*. This diagnostic approach draws upon management evaluation techniques and applies them to the study and evaluation of communications activities. The primary objective of a study is to develop sound recommendations for improvements. The audit may be of a specific communications

problem, technique, program or an entire function.

For instance, the kind of study undertaken in an audit might pertain to management reporting using the graphic mode, and involve an assessment of existing criteria for the reports' informational content, and appraisals on format design as well as on frequency and distribution methods. Or a study might be designed to render recommendations for a more effective visual-reporting system, or a more suitable medium with peripheral random access devices, and incorporating slide libraries. In fact, such studies are almost mandatory to determine usage applicability in the growing field of computer graphics technology.

In the more basic areas of software development and preparation, an audit examines production practices and procedures in order to recommend ways and means that would lessen preparation time, enhance quality, or reduce costs. Many audits of this kind generally include make or buy evaluations.

Another management technique used is the feasibility study. It is particularly applicable to communications activities in which program investments are now major investments. The high cost of adopting sophisticated electronic display hardware is a good example. Because it is somehow considered fashionable to become fully automated, some Management Information Systems have installed expensive CRT displays even though, in most every application, these devices have yet to prove their worth.

Similarly, overzealousness has led to extensive commitments in the television medium for training purposes, only to discover that the move has been premature and, hence, economically disastrous. Yet by conducting feasibility studies to provide the basis for sound decision-making regarding viable alternatives, trial and error consequences can be all but minimized.

A Typical Software Problem in Charting

A Multiple Surface chart is usually plotted in absolute numbers, but if the nature of the data requires the conversion of the absolute numbers into percentages of the total, than a 100% Surface chart should be used—but a caveat must be included in any consideration to use this form.

The principal reason for selecting the 100% Surface over the Multiple Surface is that the data's absolute figures are not compatible to a common scale. However, care should be exercised to determine if the compatibility is the result of irregular or non-recurring "occurrences," such as strikes, which can cause "freak" points. In other words determine if the curve is affected by a factor that may never, or at least hardly ever, happen again. If such is the case, caution should lead you to investigate the visual effect this freak point will cause.

A good example of what could happen can be seen if a strike were to put all competitors out of business for a

period of time. Naturally, the sole surviving company's sales would skyrocket, as shown in the table below.

The chart illustrated shows the data plotted in absolute numbers. Now take a look at the chart next to it and observe what effect the use of a 100% Surface chart has on the picture presented. The dramatic portrayal is just the opposite from what really happened. The sales curve is inverted!

Common sense tells us that this is not the case, and the rendition in absolute numbers portrays the case more accurately. And it is exactly this kind of analysis that must be made in selecting form as well as substance to create effective media software. □

Matt Murgio is a senior associate of Hubert Wilke, Inc., and a leading authority on audio-visual programming services.

a-v man

Robert C. McCaslin, Assistant Manager of Caterpillar Tractor Co.'s Sales Training Division, is Business Screen's **AV-Man** in this continuing series of profiles of leaders in the industrial audio-visual world.

pillar Tractor Company, in Peoria, Ill., should be the choice. As one of our advisors put it, "Bob, and the other A-V people at Caterpillar, have inherited a great tradition of outstanding audio-visual utilization over many years; they're doing a great job now, and not a little of the credit for this comes right down to McCaslin. He ought to be your man."

Robert C. McCaslin is now Assistant Manager of Caterpillar's Sales Training Division. He is in charge of the division's communications services, with a staff of 23 audio-visual supervisors and technicians who perform visual aids and graphic art services not only for their own division but for many other Caterpillar areas. In fact, 65 per cent of the section's work lies in serving the communications needs of other departments and divisions of the company.

Specifically, McCaslin's section creates charts, slides, posters, graphs, special art, photography, film animation, orientation conferences, illustrated speeches, audio training tapes and video tape presentations covering a wide variety of subjects. As an indication of the extent of the section's capabilities, the 1972 work plan calls for production of over 40 corporate information and sales training video tapes. It is expected that the number of slides delivered to the section's internal "customers" will reach 210,000 this year. A very important part of the section's responsibilities is in planning, staging and conducting conferences for large customer groups and world-wide Caterpillar dealer meetings. This involves the creation, innovation and development of all types of audio-visual aids, and sometimes the establishment of overall themes.

As another part of his corporate responsibility, McCaslin proposed and recommended specific equipment for Caterpillar's Headquarters Administration Building communications system which involves a sound studio with conduit for CCTV to five other meeting rooms. He is now developing video tape techniques for taping speakers not readily available for all conferences; subjects and interviews to enrich dealer salesman training programs, self-paced training methods and product announcements.

Bob McCaslin's present multi-faceted audio-visual activities all started, he now remembers, when, at 10 years old, he discovered his father's folding Eastman, on the farm where he grew up in Northwestern Pennsylvania. From that point on he usually had a Kodak somewhere near at hand. At Westminster College, in his home town, Bob formed M&S Photography

Studios with another student and handled wedding jobs and other types of photography assignments until the camera suffered a damaging accident and the company went bankrupt with no capital to buy another.

At the same time, he stumbled into a journalism course at college, liked it, and before long was working as a reporter on the town's weekly newspaper, *The New Wilmington Globe*. Free-lance writing for national magazines followed, including one story published in the *Fur-Fish-Game Magazine*.

Wartime found McCaslin first in the Merchant Marine, later in the Air Force (he started the post newspaper at Craig Field, Selma, Ala.), and finally, as a Signal Corps officer, working in motion picture news coverage of the war in Europe.

After five years in the Army, Bob McCaslin returned to Independence, Missouri, where his wife, Velma, and young daughter, Pamela, were living, and started to work as Advertising Manager of the Witte Engine Works.

In 1949, he joined Caterpillar, in Peoria, and has been there, very happily he says, ever since. During this time, he has been responsible for a great many innovations in the way the company communicates.

"When I came with Caterpillar," Bob McCaslin said recently, "the first annual business meeting consisted of four vice presidents seated behind a table, each with a microphone, and they answered questions from the audience about the company business. This contrasts sharply to the three-screen rear-screen presentations that I developed in later years as a communication device, and was a forerunner. I suspect, of the Worldwide Dealer Meeting we've just concluded with a 30-foot wide screen and nine projectors."

McCaslin's work is not limited to headquarters, or even strictly domestic audio-visual activities. "My group works internationally with subsidiaries throughout the world in Hong Kong, Switzerland, Brazil, France, Great Britain, Belgium, South Africa and with the Caterpillar Mitsubishi partnership in Japan. We currently offer consultation on meeting room design, communication equipment, and communication media selection. We serve as an unofficial focal point for the worldwide network of video tape communication. We called together those corporate groups which would have a need for video tape communication in 1968 and at that time established a corporate standard for video tape. This has resulted in an ability to communicate with each other where-

When we talked to members of our ad hoc advisory committee about the selection of an A-V Man for this issue of *BUSINESS SCREEN* it didn't take long for a consensus to arise that Bob McCaslin, at Cater-

ever we are around the world. We began with a video tape studio in our corporate headquarters building in Peoria and there are now several groups in Peoria which also are producing video tapes for their own respective departments. There is a great exchange of information and help between all of these functional groups.

At this point we asked Bob McCaslin whether he believed that audio-visual expertise should be so widely disseminated that each department in the company should perform A-V functions unaided as a part of its regular duties, or, should these functions be centralized in one service department serving the whole company?

"We have argued this question of whether there should be a single audio-visual communication source within a company," McCaslin answered. "I think it largely depends upon location. Here the corporate headquarters is in downtown Peoria. The Industrial Division is 11 miles up the river. The Service Department is 1-2 miles over in East Peoria. In each of the General Offices departments, however, there are one or two people who are that department's specialists in audio-visual communication. These people have their work done by my staff in the corporate headquarters. We do welcome the expertise of these people and are pleased to work with them. I would suspect that in our company, at least, a single source audio-visual communication would become almost an unwieldy organization and would work a disservice to those people who are located away from downtown Peoria. With a smaller company, I would think that a one service department for the whole company would be an ideal setup. When you are international as we are, this presents greater problems than advantages."

Besides supervising his section's wide service functions, McCaslin spends a good deal of time in the experimentation and development of what he thinks may be effective new training devices, not only in terms of hardware, but in terms of ideas.

"I have long been an advocate," he says, "of self-paced training as an effective means of transmitting information and knowledge. We are fortunate to develop our Challenge Learning Series based on this self paced concept using audio tapes to transmit the teaching and workbooks to reinforce the student's knowledge. The technique has been highly effective. We are also experimenting now with student response systems and other modes of training reinforcement aids. Cost cutting is, of course, a part of every day's operation. We are always trying to find new ways of doing things at a cost

saving and greater effectiveness. This has recently led us to such experimentation as the new color microfiche from Eastman Kodak. I'm responsible to the Sales Training Manager to conceive ideas and to implement them in developing effective communication units regardless of media."

Away from his desk at Caterpillar, McCaslin has had an equally active life. He has worked in his town's PTA, Boy Scouts, community development organization, and Peoria's South-West Kiwanis Club. He hunts rabbits and pheasants, works (unsuccessfully so far) at bow-hunting for deer, and fishes at Lake of the Ozarks, Missouri, where he is remodeling and rebuilding a vacation home. Not unimportant to his overall audio-visual duties in the job of serving as chief photographer to his granddaughter and grandson.

Bob McCaslin joined the Industrial Audio-Visual Association early in his career at Caterpillar. "The members have been extremely helpful to me," he says, "and to my company." He is a past president, and has twice served as program chairman for national meetings.

We asked McCaslin for his thoughts on the state of the industrial audio-visual man today, and what he could

see developing in the future.

"The A-V Man of today seems to be standing on a broader platform than he did some 20 years ago," he answered. "He is more interested and more concerned with over-all communication and I do see a trend toward a combination man rather than a specialist in one or another fields of media. In my own case, I find a happy marriage between a training function and a communication function. The audio-visual man is a teacher—he teaches people how to be more effective in their communication, in their training, in their corporate communications and he helps them adapt their message to the various audiences and publics that the company wishes to reach. Opportunities for the audio-visual man of today are much greater, but he'll have to work harder, too. He must keep pace and anticipate new developments relating to technique . . . to hardware . . . to communication need within his own company. But most important of all, he must have an outgoing, dedicated-to-serving posture and be ready with methods, software and creative innovations when the need occurs. The audio-visual man of today must make communications happen the first time. We no longer have the luxury of retakes. □

AUDIOVISUAL ARCHIVES DIVISION OFFICE OF THE NATIONAL ARCHIVES James W. Moore, Director

The audiovisual Archives Division, Office of the National Archives, National Archives and Records Service, General Services Administration is the repository for more than 60 million feet of historical motion pictures created by 100 Federal agencies and non-government producers. The ever-growing collection includes a wide range of subjects covering the period from 1896 to the present. Films are not loaned, but may be viewed by researchers, film producers, or their authorized representatives. Duplicate negatives or masters of films or scenes may be purchased by individuals or producing companies subject to consent of the depositing agencies and copyright restrictions, if any.

DEPARTMENT OF AGRICULTURE Office of Information Motion Picture Service Washington, D.C. 20250

• The Motion Picture Service of the USDA produces motion pictures in color and black-and-white on agricultural and related subjects for various agencies within the Department and, on occasion, for other Government agencies. Production and laboratory services are also available on a cooperative basis with land grant colleges and universities.

Martin Lobdell, Chief, Motion Picture Service

Activities: The USDA currently has more than 300 films in distribution with an estimated audience of 380 million persons. These films cover such subjects as conservation, forestry, agricultural research, insect eradication, control of animal diseases, consumer information, rural area development, nutrition and marketing. Maintains an extensive 16mm color stock footage library of agricultural scenes which are for sale at nominal cost.

Facilities: The USDA Motion Picture Service has complete in-service production and laboratory facilities which have been in continuous operation since 1912.

Distributions: Films for school and group showings are distributed through 69 cooperative film libraries located in each state. Films for TV bookings are distributed directly from the Distribution Section, and prints of most films may be purchased from the Business Management Section. Catalogues are available of motion pictures, films suitable for TV showing, and of stock footage scenes.

Publications: Two catalogs contain complete listing of USDA motion pictures; one of these provides data on films for general 16mm distribution; the other lists films available for public service showing by television stations.

UNITED STATES ATOMIC ENERGY COMMISSION Office of Information Services Exhibits & Audiovisual Branch Washington, D.C. 20545

• The Exhibits & Audiovisual Branch of the Atomic Energy Commission coordinates the production of AEC films and responds to requests from the public media in all the audiovisual fields for assistance in the preparation of films, stills, tapes, slides and other audiovisual materials on atomic energy.

Edwin L. Wilber, Deputy Branch Chief
Phone: (301) 973-5365

Activities: The Audiovisual Section of the branch plans and carries out film, TV, radio and still picture projects to advance specific Commission programs, and acts as advise to Commission and contractor personnel in Washington and nationwide on audiovisual problems and projects. In 1971, 17 films were produced by the Commission and its contractors; about 6 films are planned for 1972. In addition, TV clips and radio platters and tapes are produced by the Commission and contractors every year. This branch also places Commission and contractor-produced motion pictures into loan and commercial sales channels, determines the content of the 4 domestic and 7 overseas film libraries, and issues a Combined Film Catalog (Education-Information and Technical-Professional) and a Classroom Science Films catalog.

Facilities: AEC has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services.

Distribution: AEC operates an 8,000 still library, 35mm color slide library, and distributes 11,000 16mm prints with 230 titles through 3 domestic film libraries. Serving the 48 states is the U.S. AEC Film Library, TIC, P.O. Box 62, Oak Ridge, Tenn. 37830. Serving Alaska and Hawaii are University libraries. The Commission also has 3 overseas libraries at its offices at the U.S. Embassies at Brussels, Tokyo and Buenos Aires, stocked with educational and technical films, and also supplies films to the film library of the International Atomic Energy Agency, in Vienna; the American Film Nuclear Center, and the Film Section of the Personnel Administration Council, Stockholm, Sweden. The Brussels and Buenos Aires libraries have about 80 films each in French and Spanish respectively.

DEPARTMENT OF COMMERCE Washington, D.C. 20230

• The U.S. Department of Commerce produces and circulates motion pictures dealing with those domestic and foreign subjects relating to the offices under the jurisdiction of this Department.

Bureau of Domestic Commerce

Saul Padwo, Director
Business and Scientific Equipment Div.
Phone: 967-3518

• The Motion Picture and Photographic Products Branch of this Division serves the motion picture, photographic, and audio-visual equipment and supplies industries. Its primary function is to foster, promote, and develop the foreign and domestic trade of these industries. It provides market development counsel to producers and exporters on where and how to cultivate and expand their sales. It participates in tariff and trade negotiations, maintains information on foreign trade trends, and periodically issues basic trade statistics on U.S. exports and imports of photographic goods. The Branch acts as a focal point for industry with reference to advice and guidance to other agencies and use of other agency facilities.

U.S. DEPARTMENT OF COMMERCE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION (NOAA)

Stanley B. Eames, Director of Public Affairs
Phone: (301) 496-8243

Elliot A. Macklow, Chief, Motion Picture Service
Phone: (301) 496-8921
George A. (Jeff) Baker, Radio/TV/Film Officer

Phone: (301) 496-8921
Marian P. Baillie, Film Librarian
Phone: (301) 496-8411

NOAA's centralized film development of film within the Office of Public Affairs administers and supervises the production of informational and educational films for all components of the Agency. Film and tape spots, short and special features for both radio and TV are also under the direction of the office.

NOAA's film library system is, at present, a dual system. Films formerly distributed by ESSA (the U.S. Weather Bureau, and the U.S. Coast and Geodetic Survey) are now handled by Modern Talking Picture Service and requests for prints should be directed to them. A catalog and order form is available on request. Inquiries about these films as well as radio and TV activities should be directed to: National Oceanic and Atmospheric Administration, U.S. Department of Commerce, Washington Science Center, 6010 Executive Blvd., Rockville, Md. 20852. Attention: PA.

Fishery motion pictures, formerly produced and distributed by the Bureau of Commercial Fisheries of the Department of the Interior, are distributed through a film library system consisting of about 200 Government and private film libraries. About 30 fishery motion picture titles are distributed free of charge upon request. Provision has been made so that most of the films are cleared for television, although special permission is required before telecasting. Stock footage is not available. A catalog listing the fisheries films distributed, and the instructions for obtaining them may be obtained free of charge upon request. A central film library for fisheries films is maintained. Fishery films and information about them may be obtained by writing: Motion Picture Service, NOAA, 12231 Wilkins Ave., Rockville, Maryland 20852. Because of the large domestic demand, at the present prints are not being loaned for use outside of the country. Purchase of print arrangements can be made by application to this office. Applications are also accepted from institutions wishing to serve as non-profit libraries.

Production of most of the Agency motion pictures is accomplished by using commercial

GOVERNMENT

approximately 1,000 16mm and 35mm film subjects to the Department of Defense Supply Agency annually. It maintains a studio for servicing the news media programs which feature interviews with top Defense officials. It also releases taped and film messages by Secretaries and Service Chiefs and provides advice and guidance to radio and TV news producers. It also releases to the press and TV media approximately 2,000 photographs each year.

DEPARTMENT OF DEFENSE
Defense Supply Agency: DSA
Administrative Support Center
Technical Presentations Division
Cameron Station, Alexandria, Virginia
• Technical Presentations Division, DSA Administrative Support Center, is the technical source and point of contact for the production of films for the Defense Supply Agency.

DSA's headquarters staff at Cameron Station and 27 primary level field activities furnish technical information for the films. The projects are aligned with the primary objective of the agency, mainly, to provide effective logistic support of the operating forces of all Military Services in war and peace.
Activities: This division carries out a wide variety of activities, including audio-visual communications, motion picture productions, technical and informational exhibits, still picture photography, and graphic presentations. The range of in-house staffing allows the division to contribute materially to the production of DSA films.
Facilities: DSA has no motion picture production, but uses Government and/or commercial services. The key personnel of Technical Presentations Division is as follows:
Chief, Morris S. Namkin
Phone: (202) 274-6075

ARMED FORCES INSTITUTE OF PATHOLOGY
Medical Illustration Service
Washington, D.C. 20305
Morris M. Goldberg, Chief, Medical Illustration Service
Phone: (202) 576-2866

Activities: This Institute makes or supervises films for the Armed Forces on medical subjects.
Facilities: In-house capability, and contracts through Office of the Chief, Communication-Electronics.
Distribution: AFIP operates a U.S. Army Audio Visual Support Center for medical films. The Institute procures and loans films for the Medical Services of the Armed Forces. Unclassified films are available to members of the medical profession, with borrowers paying return postage. For information about available films, write the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402 and refer to The Film Reference Guide for Medicine and Allied Sciences.

DEPARTMENT OF THE AIR FORCE
Hq United States Air Force
(AF/XOOGV)

Washington, D.C. 20330
Phone: (202) OX 5-2830
Lt. Col. Lewis S. Clement: Chief
Lt. Col. Edwin D. Boggie: Deputy Chief, Audio-Visual Systems Branch
The Branch is the central office which guides the Air Force's audio-visual activities. It is responsible for the policy guidance and management of the skills and resources which provide the Air Force with all photography (except reconnaissance and mapping and charting), closed circuit television, audio-visual libraries and depositories, presentation services, graphic arts, and training aids. It also monitors the activities of the Aerospace Audio-Visual Service (AAVS), a technical service under the Military Airlift Command (MAC).
AAVS, commanded by Col. James P. Warrdorf, has its Headquarters at Norton AFB, California. Its squadrons and detachments distributed world-wide, document Air Force and DOD activities wherever they occur in motion picture and still photography or, in increasing frequency, on video tape. The U.S. Air Force's central production facilities also located at Norton AFB produce audio-visual materials with its in-service motion picture, television, and still photographic capabilities. It also procures them from commercial production firms. The USAF Central Motion Picture Film Depository and Central Audio-Visual Library are at Norton AFB as well. The Central Still Photographic Depository is a function of the 1361st Photo Squadron (AAVS), 1221 So. Fern Street, Arlington, Virginia 22202.

Specific information regarding the commercial production of Air Force audio-visual materials may be obtained by contacting:
Aerospace Audio-Visual Service (DMP)
Norton AFB, California 92409
Phone: (714) 382-3215
Information regarding distribution of Air Force audio-visual materials may be obtained from:
USAF Central Audio-Visual Library

DEPARTMENT OF THE NAVY

• The U.S. Department of the Navy produces motion pictures and still photographs for such purposes as training, maintaining fleet readiness, explaining new weapons and devices, and for medical historical, indoctrination, safety and recruiting uses, public relations, to name a few key subject areas.
• Information and General Policy Procedures on all aspects of the Navy film program, in-

Whatever camera turns you on...

we'll turn it on.

normal conditions are restored. For even greater maneuverability, there's an optional 6-foot coiled power cable that retracts to a mere 11". And to shed more light on your subject, we have a belt/light combination providing 150-250-350 watts.

When you add up all its advantages, and factor in the thousands of newsreels, documentaries and features that have been made with our Power Belt, there's little wonder why Cine 60's the standard motion picture supply throughout the world.

Whatever turns you on, let us show you how we can turn it on—accurately and reliably. Send for our spec sheet and price list, featuring the Power Belt and our other accessories.

CINE 60

INCORPORATED
Film Center Building (630 North Avenue)
New York, N.Y. 10036 Tel. (212) 566-8180

Whatever the shooting situation, the exclusive Cine 60 Power Belt gives you the voltage, current and proven reliability needed to run every professional camera on the market. Plus the unhampered mobility to go wherever the action is.

Just buckle it on, plug it in and you have convenient go-anywhere nickel-cadmium power from 6 to 30 volts, and up to 7.5 ampere-hours. Recharged by a built-in charger. And protected by an integral overload disconnect that automatically resets when

Our Environment

The bridge between pollution and a better environment is action—people doing things:

- ☐ the folks of Mercer County, West Virginia solved their pollution and flooding problems by organizing a small watershed project;
- ☐ the officials of Chilton County, Alabama created an unusual rural solid waste collection and disposal system which is now catching on throughout the country;
- ☐ the students of Herndon High School, Fairfax County, Virginia measured the quality of the water in Sugarland Run and told the Herndon Town Council what its sewage treatment plant was doing to the stream.

STUART FINLEY, INC

3428 Mansfield Road
Falls Church, Virginia 22041
(703) 820-7700

The 1st Pollution

A new film about water pollution problems: what they are, what produces them, what's being done about it, and what will happen in the future. The film visits the Potomac, the Kanawha, the Tittabawassee, the Houston Ship Channel, and other streams. It takes the viewer into the combined sewers of St. Paul, to the advanced waste treatment plant at Lake Tahoe, to Dow's chemical recycling plant, and Armco Steel's industrial waste recovery system. New concepts such as the "living filter," oxygen aeration, and sewage reclamation are shown. □ The **first pollution** movie noticed was water pollution and today we're just starting to learn how to clean it up. This substantive film about municipal and industrial water quality management will interest the viewer in water pollution problems by exposing him to many current solutions throughout the country.

26 minutes - \$10

The 2nd Pollution

The pollution that affects us most personally is the pollution of the air we must breathe. Los Angeles provides a case history of a city that has worked for decades to reduce its air pollution from both stationary and mobile sources, and yet still has a serious problem today. Chicago is using new laws and strict enforcement to control sulphur oxide emissions produced in the burning of fossil fuels. Automobiles spit out hydrocarbons, carbon monoxide, and nitrogen oxides, and current efforts are primarily focused on catalytic conversion to more acceptable materials and redesign of the internal combustion engine. □ While the **second pollution** became apparent later than water pollution, air pollution problems are of paramount importance to a clean environment.

Approximately 22 minutes - \$8

The 3rd Pollution

Pollution of the land is the **third pollution**. This is the throw-away age. Each year, billions of bottles and cans and millions of tons of miscellaneous refuse must be disposed of. Collecting all this material is difficult and expensive, but disposing of it is the real problem because of the environmental implications. Solid waste management is particularly challenging because local communities have the sole responsibility. Many have resorted to open burning or open dumping as an easy and economical solution. Today, most communities are developing better systems which use sanitary landfills, modern incinerators with air pollution controls, or even such concepts as composting. □ The **3rd Pollution** was honored at the Edinburgh Film Festival and won six other major awards.

23 minutes - \$20

Brush Creek Returns Back

Brush Creek has long been frequently used and was badly polluted. The citizens of Mercer County, West Virginia created a small watershed protection district which solved these problems and also provided new water supply and recreation.

22 minutes - \$225

Urban Sprawl

Urban sprawl is no accident. Great economic pressures cause today's zoning system to break down. What is needed is a new system which can protect natural resources and yet produce quality urban communities free from blight.

22 minutes - \$200

Recycling

Environmental pollution is a problem when we discard wastes. One solution is to recycle these glass, metal, paper, and other resources. The packaging industry and the existing primary materials industry are working toward that goal. Many manufacturers are using new machines and techniques. But new systems must be developed before large-scale recycling can be achieved. Action and governmental support are necessary before recycling can significantly reduce waste.

Ecology Lady

A gal who runs a neighborhood recycling center tells about her problems but enthusiastically says "right on!" 11 minutes—\$150

Recycling

Today's token recycling of cans, glass, and paper contrasts with new systems which may make recycling universal in the future. 21 minutes—\$200

The Realities of Recycling

A comprehensive briefing on recycling for students, officials, and concerned citizens. 38 minutes—\$300

Solid Waste Management

The Green Box

The people of Chilton County, Alabama recall how they developed an outstanding container collection system. 17 minutes—\$200

The Stuff We Throw Away

A look at today's newest solid waste management systems across the country. 22 minutes—\$200

5000 Dumps

A visit to some of our ugliest dumps to see how citizens and government can correct these problems. 21 minutes—\$200

A Day at the Dump

A tongue-in-cheek visit to the notorious Kenilworth Dump shows environmental pollution at its worst. 15 minutes—\$200

Burn, Bury, or What?

How a big city solved its solid waste disposal problem by developing a long-range plan. 19 minutes—\$200

What's New in SW Management?

A comprehensive briefing on the alternatives available today to communities. 37 minutes—\$300

Erosion and sedimentation wash away the soil and deposits silt in streams and lakes. But there are simple erosion control techniques which can be used by the developer to save money and conserve natural resources. 23 minutes—\$225

Green City

A city that has created sufficient green space for the pleasure of its citizens. Intense economic pressures force the complete elimination of available land. Citizens can protect green space. 23 minutes—\$200

People are the most powerful activists for a better environment. This film shows how college projects and how initiative and energy can outwit lethargy and bureaucracy. The establishment is often from the young.

Other Films on the Environment

Beargrass Creek

Elementary students benefit from this story of an aquatic life study of a small polluted stream. 20 minutes—\$200

A City is People

Revitalization of the central city through urban renewal and private projects makes it more livable. 22 minutes—\$225

Coal and Water

Techniques which can be used by the coal industry to prevent acid drainage and black water. 23 minutes—\$200

Crisis on the Kanawha

A big industrial complex spoils the Kanawha River and industry tries to solve its waste treatment problems. 22 minutes—\$200

The Little Rivers

Flooding and pollution problems of city streams require special water resource planning. 20 minutes—\$200

Oil on the River

The special problem of oil pollution calls for unusual techniques by the oil industry. 23 minutes—\$200

Oops!

Manufacturing plant personnel learn how to prevent spills which create water pollution. 20 minutes—\$200

Renaissance of a River

Water resource and pollution problems of the Susquehanna River from the headwaters to the bay. 20 minutes—\$200

River Watchers

River surveillance data is needed to provide modern water quality management systems. 20 minutes—\$200

Teamwork on the Potomac

Difficult river and estuarine pollution problems inspire an all-out anti-pollution program. 28 minutes—\$200

20th Century River

The Corps of Engineers surveys river problems to provide alternative solutions. 29 minutes—\$200

Water Resourcefulness

New York State plans for the future by developing a long-range water resources plan. 22 minutes—\$200

Other Films

Mental Retardation

E. — Lever to Learning

Physical education programs, fitness conditioning, and recreation are within the grasp of the retarded child and have a beneficial effect. They create new avenues of approach in the field of intellectual training. With expensive equipment such as logs, old tires, boards, and ladders, a physical education specialist trains the retarded child physically while stimulating him mentally. 22 minutes — \$200

Checky

Should a retarded child be institutionalized or kept at home? How can family life be kept normal? This poignant and yet cheerful family portrait tells how one family lives successfully with retardation. 16 minutes — \$150

Time is for Taking

America's first residential camp for retarded children serves as the setting for this film which provides a basic description of mental retardation counselors, special education majors, and parents learn effective methods of training and teaching retarded children. 23 minutes — \$200

Q. — Questionable Criterion

Multiple testing techniques provide a much more accurate diagnosis than a simple I.Q. interpretation for children with a learning problem who otherwise might be thought to be mentally retarded. 13 minutes — \$150

review

Pre-purchase preview
Pre-rental evaluation
One half of the rental price
New prints are sent as available but not necessarily stipulated dates. They are not to be used in the classroom or shown to other groups. They must be returned promptly. New prints kept for longer than one week will be billed at \$5 for replacement.

rental

One day rental for 10% of the base price. One week rental for 50% of the purchase price. We give us at least three weeks notice. Inform us if you want order cancelled if it cannot be filled on the stipulated date. A late fee can be applied against the base price within sixty days.

Replacement

Worn or damaged films will be replaced at 40% of the list price provided that the old print is returned to us. When head sections are available, they will be provided for \$25. We will attempt to make repairs of damaged films at no cost if we have repair materials available. You may send damaged prints to us for examination. All of our films are 16mm color-sound and are Peerless Processed for longer life. Write for TV permission.

Awards

Our films have won 30 awards during the last five years in such major film festivals as New York International Film Festival, U.S. Industrial Film Festival, C.I.N.E., the American Film Festival, the Columbus Film Festival, and the Washington Chapter of National Academy of TV Arts and Sciences.

Tintypes

A fun film. The pictorial beauty of the tintype pictures of the 1800's counterpointed by the fragmentary comments of the youth of today. Times have changed! Or, have they? 11 minutes

Museum of the Solar System

The moon is the museum of the solar system. Its rocks and soil will illuminate the billion year "blind spot" in the earth's history. We visit labs of lunar scientists to see their investigations. 23 minutes — \$250

Mosquito Fighters

A visit to the Cajun country of Louisiana to learn about modern mosquito control methods that are compatible with a rural environment. 21 minutes

Language — the Social Arbiter

A series of seven films which discuss the language problems of students who do not speak standard English. 21-28 minutes

Physical Education in Elementary Schools

The P.E. program's goals are as needful to a child's personal development as the goals in other curriculum areas. 20 minutes

A Living Constitution

How Pennsylvania modernizes its archaic state constitution through a constitutional convention. Appropriate for classes in government. 24 minutes

Write for brochures describing individual films

A research and development group conducts tests, experimentations, development and evaluation of photographic equipment. Here, technical photographic specifications, instructions and other publications are also prepared. Information about NPC may be obtained from: Commanding Officer, Naval Photographic Center, U.S. Naval Station, Washington, D.C. 20390.

Capt. H. B. Lee, USN
Commanding Officer
Phone: (202) 433-2102

Distribution: Prints of all Navy films available to the public can be purchased from the National Audiovisual Center, National Archives and Records Service, Washington, D.C. 20408. Civilians may borrow films from Naval District Public Affairs Officers, Training Aids Libraries, Aviation Film Libraries, Recruiting Stations and Public Information Offices located throughout the United States will serve government requests for film showings. Requests for the purchase of Navy stock footage for use in commercial productions should be submitted to the Chief of Information, Navy Department, Washington, D.C. 20350.

NATIONAL AUDIOVISUAL CENTER (GSA) Washington, D.C. 20409

Jack McLean, Director
Phone: (301) 763-7420

The National Audiovisual Center, a Division of the National Archives and Record Service, General Services Administration, provides five main services:

1. **INFORMATION.** The Center is the main contact with the public and the Federal Government regarding audiovisual materials available from Federal agencies and where and how they can be obtained. Detailed information is gathered on all relevant materials and is made available on request.
2. **SALES.** The Center functions as the central sales point for most completed audiovisual materials produced by the Federal Government. Over 4,500 motion pictures, film strips slide sets and foreign language tapes are listed in a sales catalog available from the Center.
3. **DISTRIBUTION.** The Center provides a uniform, efficient and economic loan and rental service of audiovisual materials, primarily 16mm motion pictures, deposited in the Center by various Federal Government agencies.
4. **STOCK FOOTAGE.** The Center operates the NASA Film Depository containing approximately nine million feet of motion picture depicting activities of the Mercury, Gemini, and Apollo space missions. Other Federal agencies are encouraged to place stock footage with the Center for better utilization by the Government and the public.
5. **TECHNICAL ASSISTANCE.** The Center monitors basic ordering agreements covering production services, distribution services and other audiovisual services desired by the Federal Agencies. It also provides on request to other Federal Agencies limited technical assistance relating to such audiovisual services.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE National Library of Medicine National Medical Audiovisual Center Atlanta, Georgia 30333

Charles F. Bridgman, Ph.D., Director
National Medical Audiovisual Center
Phone: (404) 633-3351

Activities: As a component of the National Library of Medicine, the National Medical Audiovisual Center plans and administers a national program to improve the quality and use of biomedical audiovisual materials in schools of the health professions and throughout the biomedical community through: (1) the acquisition and distribution of films and other audiovisual resource material; (2) audiovisual reference and research services; (3) consultation and assistance in the development and use of audiovisual materials and systems; (4) audiovisual research, training, experimental production, and other activities in the development of media to

IT DOES THE JOB.

BETTER.

The Viewlex Filmstrip SuperViewer.

Training a factory employee, educating a new recruit, presenting a marketing plan, selling a product . . . Whatever the situation, the compact, always dependable Viewlex Filmstrip SuperViewer does the job. Better.

Take a look at the 5" x 7" screen. It's bigger. And the quality of the screen images. Brighter and sharper . . . even in fully-lighted rooms. Consider how easy it is to operate. Snap in a cassette . . . maybe one you've recorded yourself. Sounds great. Thread the filmstrip. It's easier. And the automatic frame advance keeps the program running. Smoother.

The Viewlex Filmstrip SuperViewer. Built better to last a lifetime. And backed better, too, with coast-to-coast Viewlex franchised dealer service.

Write and we'll arrange for a no-obligation demonstration.

support medical education, and (5) encouragement of the production, dissemination and use of audiovisual materials.

Distribution: Films are available from National Medical Audiovisual Center (Annex), Station K, Atlanta, Georgia 30324, on loan to schools of the health professions and other medical/health institutions and organizations throughout the U.S. The films are listed in the National Medical Audiovisual Center Catalog.

SOCIAL SECURITY ADMINISTRATION Baltimore, Maryland 21235

Russell R. Jalbert, Assistant Commissioner for Public Affairs

Phone: 594 1990

Robert T. Fenwick, Chief, Audio-Visual Staff, Office of Public Affairs

Phone: 594-8300

Activities: The Social Security Administration produces and distributes films on Old Age, Survivors, and Disability Insurance, and on Health Insurance (Medicare). These are public information films designed to explain to the

viewer what he needs to know about the social security law and what benefits he might be entitled to. Most films and spots are intended for both television and theatrical use.

Distribution: Through 800 District and Branch offices throughout the country, prints may be obtained on a free loan basis. Prints may also be bought.

DEPARTMENT OF THE INTERIOR Washington, D.C. 20240

• The Department of Interior produces films which are concerned with the management, conservation and development of natural resources in every section of the Nation. Films are available from the bureau in which they have been produced.

Office of the Secretary

Office of Communications

Phone: (202) 343-3171

Inquiries concerning the use of Department of Interior films for television should be addressed to this office. A Department film catalog is available on request.

THE BUREAU OF LAND MANAGEMENT

John A. Mattoon, Chief, Office of Information

Phone: (202) 343-3609

• "The Last Frontier", winner of national and international awards for excellence, is a 29-minute film about America's last public domain lands, their history and future.

It is available from the Bureau's office in Washington, D.C. and BLM State offices in Portland, Sacramento, Phoenix, Reno, Salt Lake City, Santa Fe, Denver, Cheyenne, Boise, Billings, and Anchorage.

It is also available through Association of Sterling.

THE U.S. BUREAU OF MINES

Dr. A. Nicholas Vardac, Chief Audio-Visual Programs, Motion Picture Development and Production, Bureau of Mines, Washington, D.C. 20240

Phone: (202) 343-3359

Activities: The Bureau of Mines has a broad film program dating from about 1920. Motion picture subjects deal with the natural resources of various states and with mining commodities including metals, revealing the conservation ethic at work. Recently released films include: "Oregon and its Natural Resources", "Fahrenheit 3300, and The Minerals Challenge", "Pennsylvania and its Natural Resources".

Facilities: All films are made in cooperation with private industrial firms which pay production costs and select commercial film producers. The Bureau maintains no production facilities in this work.

Distribution: About 10,000 prints of films are distributed to the public on a free loan basis from the film distribution center at the Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213, and from depositories in 40 states. Annual number of showings exceeds 300,000 with a total audience including television of 25,000,000 people. Most films are cleared for free TV use. Single or block bookings arranged. Catalogs available.

Productions: Currently in production are films on "Molybdenum", "Wealth Out of Waste", "Mined Land Subsidence Control" and "Puerto Rico and its Natural Resources".

THE U.S. BUREAU OF MINES

Film Production Branch

Samuel R. Sappo, Acting Chief Division of Education and Training Services

Bureau of Mines, Pittsburgh, Pa. 15213

Phone: (412) 621-4500, Ext 388

Activities: The Motion Picture Branch of the Bureau of Mines plans and carries out a wide variety of audiovisual activities, including the production of motion pictures, slide filmstrips, videotape recordings, technical and informational exhibits, still photographic presentations and related media directed toward the advance of safety education and training in the various mining, manufacturing, business and service industries.

Facilities: The Motion Picture Branch has complete in-service still photography and motion picture production facilities, television and videotaping facilities. Film laboratory processing and printing are contracted for as required.

Distribution: Prints are distributed to the Bureau's various District and Subdistrict offices throughout the country and on a free loan basis from the Film Distribution Center of the Bureau of Mines, 4800 Forbes Avenue, Pittsburgh, Pa. 15213. Although most films are cleared for television, special permission is required before telecasting. Prints may also be obtained by outright purchase.

Productions: Recent productions include "The Air We Breathe in Industrial Environments", "Management's Role in Health and Safety", "Haulage Safety in Low-Coal Mines" and "Safety Practices in Low-Coal Mining" which are two accident-prevention films photographed in low-seam coal mines.

THE BUREAU OF RECLAMATION

Ottis Peterson, Assistant to the Commissioner, Information

Phone: (202) 343-4662

Activities: The Bureau of Reclamation produces one or two pictures a year on water resources development in the seventeen western states—usually "low budget" sound color films, which run 14 or 28 minutes. Film catalogs are available from the Washington D.C., office of the Bureau; the Regional Offices and the Film Distribution Center in Denver.

Distribution: Distribution of Bureau of Reclamation films is accomplished through the Film Distribution Center, Bureau of Reclamation, Bldg. 67, Denver Federal Center, Denver, Colorado 80225. On occasion, surplus prints are loaned to educational institutions for their distribution libraries.

GOVERNMENT

Interest are the award winning films, "The Eruption of Kilauea", 1959-60 and the earlier film release, "The 1955 Eruption of Kilauea". These show, at close range, the spectacular eruption of the Kilauea volcano on the island of Hawaii.

Recent film releases include the "Alaskan earthquake", 1964 and "The Sea River." The first of these films documents the destructive effects of the March 27, 1964, Alaskan earthquake both graphically and pictorially in on-the-spot scenes. The "Sea River" film records hydrological investigations carried on in the Amazon River Basin as a point operation between the Geological Survey and the Brazilian Navy.

Requests for additional information about these and other films should be addressed to the Information Office, U.S. Geological Survey, Washington, D.C. 20242.

THE LIBRARY OF CONGRESS Washington, D.C. 20540

Dr. John B. Kuiper, Head, Motion Picture Section
Phone: (202) 426-5840

The Library of Congress has an unrivalled collection of American films dating from the infancy of the motion-picture industry, which has acquired through the operation of the copyright law and through gifts, such as the American Film Institute collection, and it also has a large body of foreign films turned over to it as a result of wartime seizure. The library's activities in the motion-picture field include the registration of claims to copyright, the acquisition of films, the cataloging of films and related bibliographical data and study center for research.

The Library's Copyright Office has registered claims to copyright for motion pictures since 1894, when the first examples of this medium were deposited in the Library in the form of photographic paper prints; since 1912 the copyright law has provided for the registration and deposit of motion pictures as such. Generally, under the provisions of the motion-picture copyright agreement between the Library of Congress and the copyright proprietors, the films are returned to the proprietor by the Library after registration, but the Library has the right to retain the deposit for its collections later.

The Library's collection of motion pictures comprises over 50,000 titles and is in the custody of the Prints and Photographs Division in the Reference Department. It is primarily an archive in nature, and reference service is provided to assist research activities. The Library does not lend motion pictures, but some films may be copied under certain conditions; copying requires the signing of a standard agreement concerning the clearance of copyright and the copying of equivalent footage for the Library.

MEDIA SERVICES AND CAPTIONED FILM FOR THE DEAF Division of Educational Services, Bureau of Education for the Handicapped

Dr. Edwin W. Martin, Acting Associate Commissioner, Bureau of Education of the Handicapped
Phone: (202) 963-5925

The Media Services and Captioned Film Branch administers a program of educational media under P. L. 85-905, as amended by P. L. 87-715 and P. L. 89-258. These laws provide for promoting and general welfare and the educational advancement of deaf persons. Media Services and Captioned Films furnishes a free loan service of films for the deaf; conducts research in the use of films and other educational media for the deaf; produces and distributes films, filmstrips and related media for the deaf and for persons who work closely with the deaf (parents, employers, etc.). The branch also provides for the training of persons in the utilization of these materials and provides media equipment to most schools for the deaf.

Further expansion to provide media services to all types of the handicapped was made possible by enactment of P. L. 90-247. Actual program activities remained essentially the same as in previous years since no funds were appropriated for the expansion of the program.

You can leave the lights on and let your audience take notes, when you show films with the Bauer P6 Automatic 300. Because this superb portable 16mm sound projector features a metal-arc lamp, which is up to four times as bright as conventional projector lamps.

Or you can use the Automatic 300 in the dark, to fill even large, distant screens with light of daylight quality. The kind of light you need for a brilliant image.

No wonder this projector is recommended for auditoriums, theatres and large conference rooms.

It's available in optical and optical/magnetic playback models.

Other features: auto thread-

ing; provision to connect optional change-over unit (also recommended for remote control of projector); and Fail Safe switch that stops projector if film breaks.

Other Bauer professional 16mm projectors:

Bauer P6 Studio 16 mm double band projector. A film maker's combined film-and-sound studio.

Bauer P6 Synchron—ideal projector for film screening. Manual threading. Optical/magnetic playback and magnetic recording.

Bauer P6 Automatic M152—Self-threading A-V projector. Optical/magnetic playback and magnetic recording.

GOVERNMENT

Activities: These branches supervise the agency wide production and distribution of motion picture and other audio-visual materials on space and aeronautics and coordinate requests for NASA assistance from media producers and the public.

Facilities: Production requirements are fulfilled primarily by contractors under a "call contract" or basic ordering agreement system, with some in-house production.

Distribution: NASA films are available on free loan; stock footage and transparencies may be purchased from agency contractor laboratories. All requests for assistance in film and TV productions should be sent to Mr. Grimm. Requests to borrow NASA films should be sent to NASA Film Library, National Audio-visual Center, (GSA), Washington, D.C. 20409.

UNITED STATES POSTAL SERVICE Washington, D.C. 20260

Vincent E. Hoffman, Manager Creative Services Div.

Phone: (202) 961-8266

Ray N. Mahan, Manager Motion Picture Branch

Phone: (202) 961-7711

Activities: Operating as part of the Office of Assistant Postmaster for Communications the Creative Services Division plans and designs visual presentations for both in-house and public information. Using Contractual Service for some graphic services, and all contractual services for motion pictures. The Motion Picture Branch plans and supervises U.S. Postal Service film productions.

Distribution: Most U.S. Postal Service films are distributed through the five U.S. Postal Service Regional Offices located in Memphis, San Francisco, Chicago, Philadelphia and New York. Some distribution is Contractual as is sales of prints.

Procurement: General Purchasing Division Room 7306
U.S. Postal Service
Washington, D.C. 20260

John A. Nugent, Chief, Motion Picture and TV Branch

Activities: The Motion Picture and TV Branch produces films and videotapes on all phases of aviation. They are designed to meet the needs of the public, the aviation community and the offices and services of the FAA.

Facilities: The FAA uses both in-service capabilities and commercial contracts in its motion pictures and producing videotapes.

Film Distribution: Distribution of FAA films is handled through the Aeronautical Center Film Library, AC-44.5, P.O. Box 25082, Oklahoma City, Oklahoma 73125.

FEDERAL HIGHWAY ADMINISTRATION

William F. Hall, Chief, Photographic Section
Phone: (202) 426-60835

Activities: This Bureau produces films on subjects pertinent to highway development, safety and related subjects, sometimes in cooperation with other government agencies, state and local highway departments, and other interested organizations.

Facilities: In-house capacity.

Distribution: These films are available on a free loan basis only to Federal and State government agencies, direct from the above address. All other requests for loan and sale information should be made to the National Audiovisual Center, National Archives and Records Service, Washington, D.C. 20409.

UNITED STATES COAST GUARD Washington, D.C. 20591

H. E. Whitwer, Chief, Visual Services Branch, Public Information Division
Phone: (202) 426-1587

Activities: The U.S. Coast Guard produces information and training, as well as recruiting films. The majority are in 16mm color-sound with running time of 3 to 28 minutes. Coast Guard films have consistently been selected by the United States government for entry in foreign film festivals, and have won a number of awards.

Facilities: In-house capability. The Coast Guard has limited in-house writing, directing,

shooting and editorial capability. Additional production services as well as all processing and printing are contracted for as required.
Distribution: A catalog of U.S. Coast Guard films is distributed by film libraries in Washington, D.C. and at District offices in Boston, New York, Portsmouth, Miami, New Orleans, St. Louis, Long Beach, San Francisco, Seattle, Juneau and Honolulu.
Production: Current productions include training films, public information films and TV spots.

U.S. TREASURY DEPARTMENT Washington, D.C. 20224 Internal Revenue Service

Alvin M. Hattal, Audio-Visual Officer, Public Affairs Division
Phone: WORTH 4-4037

Activities: Film for public and internal use are prepared by the Internal Revenue Service. Motion pictures for public viewing produced by the Public Information Division those for employee training or orientation by the Training Division. The Training Division also produces filmstrips, slide/tape programs and videotapes for internal use. The Information Division also supervises production of television spot announcements for use during each tax filing period. For use during the 1973 taxpayer assistance campaign a new half-hour film, tentatively titled "We Want to Help", is in production. It is intended to bring taxpayers up-to-date on changes in tax law and filing requirements. Eleven short TV spots to provide individual filing hints also are being produced.

Distribution: The 58 district offices, and several of the larger local offices, distribute Internal Revenue Service film productions. All clearances and releases have been obtained for general showing of Internal Revenue Service films.

THE UNITED STATES INFORMATION AGENCY Washington, D.C. 20547

Hugh McL. Woodward, Acting Director, Motion Picture and Television Service

Services and Facilities: USIA produces, acquires and distributes abroad motion pictures and television films for the overseas information and cultural program of the U.S. Government. The USIA audience numbers several billion televiewers in more than 100 countries plus around one billion persons who annually see USIA films in theatres and private showings. Output ranges the full gamut of both media—from brief newsclips to feature length motion pictures and hour long television programs. These products are released in as many as 75 foreign languages. USIA has gone into satellite telecasting during the past few years and expects to use it more and more frequently in the future in order to reach USIA's audiences overseas.

Board of Directors: Terms expire Dec. 1973: Class A—Bruce Jamieson (Jamieson Film Co.); Class B—George W. Colburn (Colburn Lab Inc.); Class C—William D. Hedden (Calvin Communications); Central Region—John Howell (Western Cine Service); Northeastern Region—Robert M. Smith (DuArt Film Labs Inc.); Southern Region—James Caron (Capitol Film Labs Inc.-Miami). Terms expire Dec. 1974: Leo Diner (Leo Diner Films); Class B—Frank M. McGeary (Motion Picture Labs Inc.); Class C—Sidney P. Solow (Consolidated Film Industries); Canadian Region—L. Clemson (Northern Motion Picture Labs); Western Region—R. W. Bachmayer (Technicolor, Inc.).

ASSOCIATION OF MOTION PICTURE PRODUCERS AND LABORATORIES OF CANADA

Office (Of the President): 1103 St. Matthew St., Montreal, P.Q.

Office (Of the Executive Secretary): Suite 512, 55 York Street, Toronto 1, Ontario, Canada.

Officers: Henry Michaud (SDA Productions Ltd.) President; Ed Zemla (Canadian Cinegraph Ltd.) Vice-President; Tom F. Glynn (Lawley Films Ltd.) Honorary President.

Directors: Robert C. Crone (Film House Ltd.); Christopher Dew (Simon Christopher Dew & Co.); Andre Fleury (Sonolab Inc.); Gunter Henning (Western Films Ltd.); Gerald Keddy (Motion Picture Centre Ltd.); Ken Orton (AKO Productions Ltd.); Ralph Umbarger (Alpha Services Ltd.); Robert MacKenzie (MacKenzie Equipment Co. Ltd.).

Membership: Canadian firms, proprietorships, corporations and agencies engaged in motion picture production or laboratory work are eligible for Active Membership. Persons, firms or organizations acceptable to the membership and interested in the furtherance of the motion picture industry in Canada are eligible for Associate Membership. Present Membership: 72 Active; 2 Affiliate; 1 Associate; Total: 90.

Purpose: To promote the common interest of those engaged in the motion picture production and laboratory industries in Canada by maintaining the highest possible standards for the production of motion pictures for industrial, commercial, theatrical, or television release; to represent the industry in its relations with government, other associations and the public at large; to encourage government agencies to have their films produced by private producers.

ASSOCIATION FOR EDUCATIONAL COMMUNICATIONS AND TECHNOLOGY

Office: 1201 16th Street, N.W., Washington, D.C. 20036. Howard B. Hitchens, Executive Director.

Purpose: The improvement of education and the public welfare through the use of educational communications, educational technology, educational media and audiovisual materials and methods. Membership consists of media directors and specialists in county and city school systems, colleges and universities, and state departments of education. School supervisors and administrators, classroom teachers, librarians, and audiovisual specialists in the armed forces, in industry, health, and religious groups are also included in membership.

Conferences: Annual national convention, Las Vegas, Nev., April 8-13, 1973; Atlantic City, N.J., March 17-22, 1974; Dallas, Tex., March 9-14, 1975. Lake Okoboji Educational Media Leadership Conference, August 1973.

Activities: 1972-1973. AECT (formerly the Department of Audiovisual Instruction) adopted a new name in 1970 along with a new constitution reorganizing the association as an "umbrella" organization taking in a number of divisions and national affiliates representing special interest in the broad field of instructional technology. Through divisions and committees, AECT continues working in these areas of concern: developing and revising standards for media programs in schools and universities, evaluation of instructional materials and systems, definition and terminology, information sciences, legislation, instructional development, design of educational facilities, equipment, and materials, visual literacy, research in educational technology, certification and training of media personnel, urban education, and international projects.

Awards and Scholarships: AECT Memorial Scholarship of at least \$500 awarded annually for graduate AV study; joint AECT/EBE award for in-service education programs in K-12 institutions (11 awards—10 regional and 1 national); joint AECT/EBE award for in-service education program in college-level institution.

AUDIO VISUAL SERVICE COMMITTEE OF THE ASSOCIATION OF NATIONAL ADVERTISERS, INC.

Office: 155 E. 44th St., New York, N.Y. 10017.

Officers: Peter W. Allport, President; William D. Kistler, Vice President; Anthon C. Lunt, Administrative Secretary, Audio-Visual Service Committee.

Membership: Chairman: James G. Damon, Jr. (IBM World Trade Corp.); Committee Members: R. W. Bonta (General Electric Co.); John K. Ford (General Motors Corp.); Pat Friesner (Pan American World Airways); John P. Grember (United Air Lines); G. K. Hall (National Cash Register Co.); Herbert D. Johnson (3M Co.); Frank Rollins (E. R. Squibb & Sons); Johna Pepper (Ford Motor Co.); Samuel A. Scribner (Eastman Kodak Co.).

Purpose: The committee initiates and executes projects which will provide the "Audio-Visual Interest Group" members of the ANA with cost, technical, distribution and other information about audio-visual materials and techniques.

CHICAGO FILM COUNCIL, INC.

Office: 208 South La Salle St., Chicago, Ill. 60604. Phone: (312) 263-0497.

Officers: Gordon Hempel (Audience Planners) President; Robert Zeller (Allstate Insurance Co.) Vice President; James Bruce (National PTA) Secretary; Charles Deany (American Dental Association) Treasurer; J. Wil Anderson (Promotional Enterprises Inc.) Program Chairman.

Directors: Dan Bjick (Illinois Bell Telephone Co.); Frank Bronwell; Robert Burnett (Consolidated Film Industries); Jerry Curto, Jr. (Santa Fe Railway); Allen Hilliard (George Colburn Laboratories, Inc.); Bernie Howard (Academy Film Productions); Paul Hults (Eastman Kodak Company); Ray Hyde (Barton Brands); Robert Konikow; William Kruse; Daryl Miller (American Dental Association); Carl Nelson (Studio Seven); Charles Probst (Cybern Film Systems, Inc.); Sue Sager (People Reaching Productions); Robert Seipp (WSNS TV); Ed Swanson (Modern Talking Picture Service, Inc.).

Purpose: The purpose of the Council is to promote, improve and extend the use of films and other audio visual materials for

commercial, informational, cultural, and socially constructive purposes and to seek constructive purposes and to seek progressive methods of film production, distribution, and effective use of films.

CINE (COUNCIL ON INTERNATIONAL NON-THEATRICAL EVENTS)

Headquarters: 1201 Sixteenth Street, N.W., Washington, D.C. 20036

Officers: Dr. William G. Carr, President; James G. Damon, Jr., First Vice President (IBM World Trade Corp.); Vincent J. Byrne Vice President-Finance (Xerox Education Group); Thomas W. Hope, Vice President-Information (Hope Reports); David O. Poindester, Vice President-Festivals (Population Communication Center); J. Edward Ogelsby, Vice President-Selections (Virginia State Department of Education); Daryl I. Miller, Secretary (American Dental Assoc.); Dr. Anna L. Hyer, Treasurer (National Education Assoc.); Reid H. Ray, Past President (Rochester Institute of Technology); Anita S. Price, Managing Director.

CINE is a voluntary, non-profit organization established to coordinate the selection of United States documentary, training and short subject motion pictures for submission to overseas film festivals. Those that are selected are awarded the Golden Eagle certificate and CINE Eagle certificate for amateur films. Selections are made twice a year. Closing dates for entries are February 1 and August 15. The Annual Awards Ceremonies are held each November.

THE EDUCATIONAL FILM LIBRARY ASSOCIATION

Office: 17 West 60, New York, New York 10023.

Officers: Abraham Cohen, President; Cameron MacAuley, Vice President; Penny Northern, Secretary; Esme J. Dick, Administrative Director (at headquarters).

Committees: Esme Dick, Festival Chairman; Penny Northern, Nominations Chairman; Jill Ippee, Membership Chairman; Abraham Cohen, Evaluations Chairman.

Membership: (Constituent)—706 non-profit educational institutions; (Service)—94 commercial organizations and interested individuals; 8 sub-memberships and 161 personal memberships, Magazine 605, for a total enrollment of 1,574.

Purpose: To encourage and improve the production, distribution and utilization of educational films. EFLA conducts a film evaluation service and the American Film Festival annually in May.

THE FARM FILM FOUNDATION, INC.

Main Office: 1425 H. St., N.W., Washington, D.C. 20005.

Officers: Dr. Charles E. Palm (Cornell Univ.) President; Edith T. Bennett, Executive Vice President; Lewie B. Martin (Pope, Ballard & Loos) Senior Vice President; Marie L. Taylor, Rosalee M. Sampson, Vice President; Roger Fleming (Am Farm Bur. Fed.) Treasurer; H. N. Hunsicker (Future Farmers of America) Secretary; C. Dana Bennett, Special Consultant; Julian B. Heron, Jr. (Pope, Ballard & Loos) Counsel.

Board of Trustees: Edith T. Bennett, Exec. V.P.; Richard J. Babcock (Farm Journal); William J. Brake (National Grange); Roger B. Corbett (New Mexico State University); Jack L. Cudd (International Harvester Co.); John H. Davis (Agribusiness Consultant); Roger Fleming (American Farm Bureau Federation); James E. Gibson (National Archives); Howard Harris (CPC International, Inc.); H. G. Hawes (Maine Dept. of Agriculture-Ret.); Patrick Healy (Natl. Milk Producers Fed.); R. M. Hendrickson (Pfizer, Inc.); H. N. Hunsicker (Future Farmers of America); Karl D. Loos (Pope, Ballard & Loos); G. C. Matthiesen (Allied Chem. Corp.); D. F. McMillen (Sunkist Growers, Inc.); Charles E. Palm (Cornell University); Lloyd E. Partain (Soil Conservation Service); James H. Roe (Jim Roe and Assoc., Inc.); Vernon Schneider (American Institute of Cooperation); John W. Scott (National Grange); Melvin E. Sims (Nat. Council of Farmer Co-ops); R. Douglas Stuart (Quaker Oats Co.); A. W. Tenney (Consultant, Vo-Ag Education); R. N. Whipp (Natl. Assoc. of County Ag. Agents).

Meetings: The Trustees meet each year in June. The Board of Consultants meets to screen films on call of the Executive Vice President. **Purpose:** The creation of better understanding between rural and urban America through audio-visual education.

Activities: (1) Distributes through its main office and cooperating depositories 16mm motion pictures found suitable by Board of

ORGANIZATIONS

Consultants for Foundation endorsement. Distribution is principally to rural America. There is no cost to film users except for return postage. The Foundation through its contacts with all phases of rural America, makes available a unique consultation service to film sponsors and producers.

THE FILM COUNCIL OF GREATER COLUMBUS

Offices: Center of Science and Industry, 280 E. Board Street, Columbus, Ohio 43215, and Office of Columbus Film Council, Kresge Bldg., Room 408, 83 South High St., Columbus, Ohio 43215.

Officers: Dr. D. F. Prugh (Director, Franklin County Historical Society) President; Nils Lindquist (President Lindy Productions) Executive Vice-President; Mary A. Rupe, Secretary-Treasurer, Film Council of Greater Columbus.

Trustees: G. Roger Cahaney (President, Sterling Movies U.S.A.); Dr. Edgar Dale (Research Associate of the Bureau of Education, Ohio State University); Carl M. Lenz, (President, Modern Talking Picture Service); Dr. Robert M. Wagner (Chairman, Dept. of Photography, Ohio State University); Charles W. Vaughn, (Director of Communications Arts Department, Xavier University); Dr. Robert Wagner (Chairman, Dept. of Photography & Cinema, Ohio State University).

Purpose: To promote a greater interest in the production and use of films by schools and universities, public service organizations, civic groups, and business firms and industries. The use of films by these organizations in the Columbus area and the state is also stressed. A new objective is the promotion of films in all fields produced by students. This is the second year for student entries in the Columbus Film Festival.

Advisory Board: G. Roger Cahaney (Ex. Vice Pres. Assoc.-Sterling Films); Mrs. Florence L. Fogle (Associate Prof. of Health, The Ohio State Univ.); Carl M. Lenz (Pres. Modern Talking Picture Service, Inc.); Dr. Robert Wagner (Chairman, Dept. of Photography & Cinema, The Ohio State Univ.).

THE UNIVERSITY FILM ASSOCIATION (Formerly University Film Producers)

Office (of the President): Dr. Ernest D. Rose, Professor, Radio-TV-Film Dept., School of Communications & Theater, Temple University, Philadelphia, Pa.

Officer: Ernest D. Rose, President; Edward P. McCoy (Radio-TV-Film Dept., Temple University), Executive Vice President; Robert W. Wagner (Dept. of Photography, Ohio State Univ.); Editorial Vice President; Marshall Lovrien (Motion Picture Unit, Univ. of Iowa), Conference Vice President; J. Sol Wrenn, Jr.

(Film Production Service, Va. St. Board of Education), Treasurer; Kaye Finch (Motion Picture Unit, Univ. of Iowa), Secretary; Raymond Fielding (School of Communications, Temple Univ.), Past President.

Board of Directors: Dennis Lynch (University of Iowa); Peter Dart (Univ. of Kansas); Sanford Gray (Univ. of So. Dakota); Donald E. Staples (N.Y.U.); Richard D. McCann (Univ. of Kansas); Edward S. Perry (University of Texas).

FILM PRODUCERS ASSOCIATION OF NEW YORK, INC.

Office (of the Executive Director): 165 West 46th Street, New York, N.Y. 10036.

Officers: George Cooney (EUE/Screen Gems), President; Charles Ticho (Fred A. Niles Communications Center), Vice President; Irving Hecht (Cineffects, Inc.), Secretary; Robert Gross (American Film Productions), Treasurer. **Directors:** Julie Barron (MPO Prods.); Bob Cohen (Duo Prods.); Ronald Cohen (Jerome J. Cohen); Tim Galfas (Galfas Prods.); Mel Gold (Manhattan Sound); Sanford Greenberg (DFI Communications); Howard Henkin (Trio Prods.); Sam Magdoff (Elektra Film).

Executive Director: Harold Klein. **Purpose:** An organization of professionals in the art and craft of motion picture making, dedicated to preserving standards of quality, service, good practice, ethics and to the development of the industry. The organization, through membership meetings and active committees works to advance the motion picture industry in all of its branches; to establish and maintain a high standard of ethics among producers, their employees, their suppliers and their clients; to distribute accurate information with regard to technical improvements; to advise the general public on the importance of the film industry in the nation's economy; to encourage responsible people to enter the industry; to promote, stabilize and coordinate all elements of the industry.

THE INDUSTRIAL AUDIO-VISUAL ASSOCIATION

Office (of Executive Secretary): Frederic J. Woldt, 313 Stanley Ave., Waukegan, Ill. 60085.

Officers: Harold N. Read (Liberty Mutual Insurance Co.) President; John P. Tierney (Standard Oil Co.-NJ) 1st Vice President; Richard H. Joy (Burroughs Corp.) 2nd Vice President; Robert C. McCaslin (Caterpillar Tractor Co.) Vice President-Illinois; Fred P. Barker (Del Monte Corp.) Secretary; Paul A. Anderson (Northwestern Bell Telephone Co.) Assistant Secretary; Frederick J. Woldt (Retired-Illinois Bell Telephone Co.) Exec. Secretary-Treasurer.

Directors: Allan A. Murdock (Ford Motor Co.) Central Region; William T. Dikeman (Penn Mutual Life Insurance Co.) Eastern Region; Wayne E. Peterson (General Mills, Inc.) Northern Region; Eugart Yerian (Holiday Inns, Inc.) Southern Region; Edward L. Carroll (Southern Pacific Co.) Western Region.

Advisory Council: Herbert D. Johnson (DM Co.-Historian, Thomas C. Zarbo (Bell Aero systems Co.-Membership Chairman, Gerald K. Hall (National Cash Register Co.) Pas Presidents Chairman, Robert F. Unrath (The Port of New York Authority, Publicity Chairman, John T. Hawkenson (Retired-Illinois Central Railroad) Standards Committee Chairman. **Purpose:** To study all means of audio-visual communications including creation, production, appreciation, use and distribution to promote better standards and equipment and to establish a high concept of ethics in the relation of members with associated interests.

INTERNATIONAL QUORUM OF MOTION PICTURE PRODUCERS (IQ)

Office (of the President): Paragon Products, 2363 Hunter Mill Rd., Vienna Va 22180. Phone: (703) 281-9044.

Officers: W. B. H. Legg Jr. (Paragon Productions, Vienna, Va.) President; Hack Swain (Hack Swain Productions, Sarasota, Fla.) Vice President; Fred A. Niles (Fred A. Niles Communications Center, Chicago, Ill.) Secretary-Treasurer.

Governors: Georges Passis (Filmedia, Paris, France); Heinrich Fueter (Condor Films, Zurich, Switzerland); G. H. W. Groom (Films of Africa, Johannesburg, South Africa).

Membership: Founded in 1956, members include 72 non-theatrical motion picture production companies located in 43 marketing areas of the United States, plus one company in each of Australia, Austria, Belgium, Canada, Columbia, Denmark, Finland, France, Germany, Greece, India, Israel, Japan, Kenya, Mexico, Netherlands, Norway, Peru, Philippines, Portugal, Singapore, South Africa, Spain, Sweden, Switzerland, Turkey, United Kingdom, and Yugoslavia.

Purpose: IQ is an international network of non-theatrical producers of films for industry, government, and television. Purposes are to assist in the exchange of ideas, information and understanding among members; to broaden the horizon of each member through affiliation with member-producers located strategically throughout the world; to raise the professional standards of firms by examples of excellence; to share among members new concepts and technology for the betterment of motion pictures; to exchange information on personnel, equipment and markets for the benefit of all members; to provide information on conditions in each area; and to simplify and render more productive the operations of all members.

Activities: Publishes newsletter, QUORUM QUOTES on a quarterly basis, annual meetings 1973, May 10-24, Cannes and Paris. France; 1974, May, Portland, Oregon (proposed); 1975, May, Zurich, Switzerland (proposed). Also meets each October in conjunction with the International Film & TV Festival of New York.

INTERNATIONAL FILM, TV AND A-V PRODUCERS ASSOCIATION (IFTAPA)

Offices: 1775 Broadway, New York, N.Y. 10019.

Officers: William Van Praag, New York, President; J. Galveias Rodrigues, Portugal General Vice President; Alfred Tennyson, New York, Vice President of the Western Hemisphere; E. Beckh, Zurich, Vice President of the European Area; L. Becker, Sidney, Vice President of the Far East Area; Ian Mutsu, Tokyo, Vice President of the Pacific Area; Bernie Barnett, New York, Vice President of the Associate Members; Arthur R. Rose, New York, Treasurer; Herbert Rosen, New York Executive Director.

Board of Directors: Jerome J. Cohen, U.S.A.; Richard M. Kerns, U.S.A.; Ronald F. La Voie, U.S.A.; W. B. Legg, Jr., U.S.A.; Phil Martin, U.S.A.; Pedro E. Misner, Puerto Rico; Fred A. Niles, U.S.A.; Georges Passis, France; Tadaomi J. Shikanai, Japan; Jerko V. Tognola, Switzerland; Gyula Trebitsch, Germany.

Purpose: The purpose for which IFTAPA has been organized are: To advance, internationally, the film, television, and audiovisual fields, and all their branches. To be a vehicle for collecting new ideas on production, equipment and facilities available throughout the world. To work with international organizations or individual countries to set up international standards. To collect and make available statistics and other data. To distribute and disseminate to its members important news. To promote activities relating to technical research, testing supplies and materials. To create and maintain cordial relations and cooperation amongst its members.

Publications: The IFTAPA—Newsletter.

AEGIS PRODUCTIONS, INC.
381 PARK AVENUE SOUTH
NEW YORK CITY 10016
212/684-0810

ORGANIZATIONS

THE NATIONAL AUDIO-VISUAL ASSOCIATION, INC.

National Office: 3150 Spring St., Fairfax, Virginia 22030.

Contact: Harry McGee, Executive Vice President and General Manager.

Officers: Baggs E. Huff, Chairman of the Board; Robert E. Heller, President; Malcolm P. Ewing, First Vice President; W. James Orth, Second Vice President; Eugene F. Matthews, Treasurer; Ann T. Vath, Secretary and Asst. Treasurer.

Membership: A trade association of the commercial audio-visual industry; membership consists of (1) A-V dealers and film libraries; (2) A-V materials' producers; (3) A-V equipment manufacturers; (4) independent A-V suppliers' representative; (5) professional services; and (6) overseas commercial.

Purposes: The Association was organized in 1939 to (1) collect and furnish data which will benefit A-V business; (2) improve the professional status and business practices of the industry; (3) provide business education and information; and (4) promote better relations between A-V suppliers, distributors, and customers.

1973 Activities: The NAVA Convention and Trade Show: January 20-23, Houston.

THE NATIONAL COMMITTEE ON FILMS FOR SAFETY

Office (of the Secretary): 425 North Michigan Ave., 5th Floor, Chicago, Illinois 60611.

Officers: Phil Carspeken (National Association of Automotive Mutual Insurance Companies), chairman; William Wendland (National Safety Council), Secretary.

Member Organizations: American Automobile Association, American Association of Motor Vehicle Administrators, American Insurance Association, American Medical Association, American Mutual Insurance Alliance, American National Red Cross, American Petroleum Institute, American Public Health Association, American Society of Safety Engineers, American Society for Training and Development, American Water Works Assn., Association of Safety Council Executives, Auto Industries Highway Safety Committee, Department of the Air Force, Department of the Army, Department of the Navy, Department of Transportation, Highway Users Federation, National Association of Automotive Mutual Insurance Companies, National Association of Manufacturers, National Association of Mutual Casualty Cos., National Fire Protection Association, National Grange, National Safety Council, The Traffic Institute.

Purpose: A co-sponsored group of national organizations, with active interest in accident prevention through use of films, who wish to accomplish the following objectives: 1. To stimulate production and use of safety films. 2. To raise the quality of films produced. 3. To establish film evaluation standards. 4. To recognize film excellence in awards program.

1973 Activities: April meeting of the Committee as a Board of judges to screen and finally judge entries in their 30th Annual Safety 16mm Film Awards Program. October evening showing of top winning films and presentation of awards to representatives of sponsors and/or producers (during the National Safety Congress and Exposition in Chicago, Ill.).

THE SOCIETY OF MOTION PICTURE AND TELEVISION ENGINEERS

Headquarters: 862 Scarsdale Avenue, Scarsdale, New York 10583.

Officers: Wilton R. Holm (Assoc. of Motion Picture & TV Prod.), President; Byron S. Roudabush (Byron Motion Pictures, Inc.), Executive Vice President; Deane R. White (E. I. du Pont de Nemours & Co.), Past President; Wm. T. Wintringham (Consultant), Engineering Vice President; Richard E. Putnam (General Electric), Editorial Vice President; Kenneth M. Mason (Eastman Kodak), Financial Vice President; Harry Teitelbaum (Hollywood Film Co.), Conference Vice President;

Wm. D. Hedden (Calvin Communications, Inc.), Sections Vice President; Herbert E. Farmer (University of Southern Calif.), Vice President for Educational Affairs; Carlos H. Elmer, Vice President for Photo-Instrumentation; Edward H. Reichard (Consolidated Film Industries), Vice President for Motion Picture Affairs; Roderick T. Ryan (Eastman Kodak), Vice President for Photo-Science Affairs; K. Blair Benson (CBS Television Network), Vice President for Television Affairs; E. B. McGreal, Secretary; Joseph T. Dougherty, Treasurer.

Conferences: 113th Technical Conference and Equipment Exhibit, May 20-25, 1973, Drake Hotel, Chicago. 114th Technical Conference and Equipment Exhibit, Oct. 14-19, 1973, New York Hilton Hotel, New York.

THE UNIVERSITY FILM ASSOCIATION

Office (of the President): Stuart A. Selby, University of Windsor, Windsor 20, Ontario. **Officers:** Stuart A. Selby, President; Loren Cocking (Southern Illinois University) Executive Vice President; Robert W. Wagner (Ohio State University) Editorial Vice President; Richard A. Sanderson (University of Hawaii) Conference Vice President; J. Sol Wrenn, Jr.

(Virginia State Board of Education) Treasurer; Howard Suber (University of California at Los Angeles) Secretary; J. B. Watson, Jr. (Dartmouth College) Past President.

Annual Conference: 27th Annual Conference will be held at Dartmouth College August 26-31, 1973, J. B. Watson, Jr., Host Chairman.

UNIVERSITY FILM FOUNDATION, INC.

Office (of the President): O. S. (Steve) Knudsen, 121 Pearson Hall, Iowa State University, Ames, Iowa 50010.

Officers: O. S. Knudsen (Iowa State Univ.), President; John Flory (Eastman Kodak Co.), Vice-President; Herbert E. Farmer (Univ. of So. Calif.), Secretary; J. E. Oglesby (Virginia State Board of Education), Treasurer.

Purpose: This Foundation is a tax-exempt, non-profit corporation established to raise endowment; handle research contracts; and facilitate fellowship and scholarship programs.

The Changing Face of Public Relations— And What Films Can Do About It

The work of public relations and management personnel in many industries and public utilities has become "a nightmare of frustration" in the face of hostility from many quarters. Public education—particularly of the young—using new ideas and techniques is a must if the future job of supplying goods, services and energy can be effectively accomplished.

by ROMNEY WHEELER

A utility marketing executive of my acquaintance summed it up in these words: "This job used to be fun," he said. "It isn't, any more."

His observation could be applied to many other aspects of the utility business, apart from marketing. For suppliers of electricity and natural gas, the job has become a nightmare of frustration. Soaring costs, inadequate rates, fuel shortages, and regulatory and litigious delays in bringing new facilities into service have combined to make it ever more difficult to meet energy demands, both those of today, and the expected demands of tomorrow.

These difficulties have brought enormous and hitherto unanticipated public relations problems. Indeed, it is not an exaggeration to say that, within a span of less than three years, the entire face of utility public relations has been changed.

A few short years ago—certainly less than five years, for most utilities—public relations was equated with maintaining a favorable image as "a good neighbor." It was, if I may be allowed a little hyperbole, a Golden Age when the news media and the public were impressed by corporate announcements of big construction budgets, big expansion, big generating plants, big transmission lines and greater gas supplies, and reminders that energy remained the biggest bargain in the family budget.

It also was an article of faith among utility executives that, come what might, the company would meet the energy requirements of its customers. And the accomplishment of this objective in spite of tornadoes, hurricanes, ice storms, and other disasters—including unplanned and unexpected breakdown of vital equipment—was presumed to earn the company the unlimited approbation of its grateful customers.

Moreover, utility rate cases were few and far between. Most companies were able to bask in the comfortable but mistaken assumption that economies of scale would always beat inflation.

It was, indeed, a Golden Age when service, reliability, and low rates were the foundation of most public relations efforts. Unhappily, that day is gone. It is unlikely to return, at least in the time of most utility executives in responsible positions today. Instead, energy suppliers are faced with a new and hostile world, in which utility managements must defend themselves against an almost limitless range of attacks. Yet, at the same time, they must endeavor to carry out their assigned function of assuring the energy needs of their customers in the fore-

seeable future.

This change from amiable contact with customers to adversary conflict with opponents has forced a drastic reevaluation of many public relations efforts. Most especially, it has forced utility public relations executives to ask themselves difficult and disquieting questions. Like: "Whom should we be trying to talk to? What should we really be trying to say? And what methods can we use to reach effectively the audiences whose opinions we have decided are essential to the company's future?"

These questions may seem like elementary public relations, lifted from any college PR textbook. If so, the resemblance is misleading. They are instead, profound considerations that go to the very foundations of today's utility public relations posture.

The Public Relations Audience

The inquiry should begin with: To whom are we trying to talk? Several groups immediately come to mind:

First, there are the company's customers. They now must be made aware that the day of cheap energy is past. And that, if they are to continue to have the energy they need, when they

In this article, originally published in Public Utilities Fortnightly, Romney Wheeler, Vice President and Director of Public Relations of Consumers Power Company, describes how his company has used films with great effect in its public education efforts. The problems of the public utilities are, to a greater or lesser extent, not too dissimilar from those often facing other industries. We believe his message has value for all of American industry.

need it, the utility is going to have to charge more for its product.

Second, there is the business community, especially the small businessmen in the area the utility serves. They must be made aware that their own economic future, and the economic future of their communities, hangs in the balance. They must be reminded, tactfully but positively, that their enterprises depend absolutely on plentiful and reliable supplies of energy. If energy suppliers cannot continue to grow, if they cannot build today to meet the inevitably greater demands of tomorrow, then these enterprises will quickly feel a disastrous pinch. In short, without energy, everything tops.

Third, there is organized labor. Traditionally, organized labor has regarded business management as an opponent. Rarely, if ever, is management recognized as an ally. Yet today, with the difficulties being faced by the nation's energy suppliers, it is becoming more and more apparent that harsh realities have moved onstage. Jobs and job securities are fundamentals that are understood by every labor leader. Without jobs, there are no wages. Without wages, there are no union dues. Without dues . . . ; well, one

need not carry the lesson any farther.

What must now be said, and said clearly, to organized labor, is that jobs depend absolutely on assured supplies of energy. Without it, assembly lines stop, transportation is crippled, services crumple, and even mechanized farms would become largely inoperable.

Finally, and perhaps the most important audience of all: Young people. Not just "young people" between the ages of eighteen and twenty-five, but those who still are in school, all the way from kindergarten to college. There is abundant evidence that these impressionable young people are profoundly concerned and troubled about the world in which they will have to live. Many of them are anxious and frightened by the intemperate and often exaggerated claims of self-proclaimed experts who oppose any increase in energy resources, and who proclaim that all is lost unless zero population growth is achieved instantly.

It is essential for energy utilities to communicate with young people, and to present to them factual, reasoned, and authoritative information that will enable them—and their teachers—to put these difficult and perplexing ques-

Romney Wheeler, Vice President of Consumers Power Company, has had a distinguished journalistic, radio and television career. He was formerly Director of European Operations for NBC, and later Director of International TV for the United States Information Agency.

"**This Side of Tomorrow**," produced for Consumers Power by Portafilms, Inc., portrays in sharp contrast the old and new in Michigan while exploring the controversy regarding change as a way of life versus change as a means of progress. Vandenberg Center, in Grand Rapids, shown here, is typical of the rejuvenation of several Michigan towns and cities.

tions into some perspective.

This is not easy. Utilities for many years have ignored the schools, except as a source of prospective engineers. At best, they have contributed funds to institutions of higher learning, and perhaps have encouraged broader knowledge of nuclear power. Few have concerned themselves with elementary and secondary schools, except for annual warnings to be careful about flying kites near power lines.

Today's problems, and the prospect of even greater difficulties in the immediate future, require a new appraisal of this important audience by all utility managements. Utilities must communicate with young people now, BEFORE they leave school. If they do not do so, it will be too late.

Young people, starting with those in the lower elementary grades, must become aware of how much they depend on energy. In simple terms, that can be understood by children of their respective ages, they must learn that the quality of life they will enjoy in the future is directly related to supplies of energy. And they must be given the knowledge necessary to enable them to make intelligent judgments between different courses of action. In short, they must understand the meaning of "trade-offs."

As was noted earlier, this is not an easy task. Most utility public relations people seemingly remain wedded to the concept that booklets and bill stuffers, plus a few carefully worded news releases and a few institutional ads, can solve their problems. Unfortunately, if this were ever true, it certainly is not true today.

The Exposure Race

Critics of the energy utilities—especially the environmental activists opposing new power plants—have discovered one of the elemental facts of

modern life. That is, a loud voice and sensational claims catch the headlines. Moreover, the news media thrive on controversy; and tomorrow's explanations and denials never succeed in catching up with yesterday's headlined accusations.

Thus, news releases, brochures, and bill stuffers may give top management a nice warm feeling; but they hardly meet today's public relations challenges.

Institutional advertising can, and should, provide an important and reasonably effective avenue of communication with the adult audience. Well-planned, well-executed newspaper ads and radio and TV commercials serve a useful, although transitory, purpose in reaching customers, the business community, and even some members of organized labor.

However, institutional advertising in the mass media has little effectiveness in communicating with young people. This is especially true of those who are still in school. These young people, as a rule, are not avid readers of their daily newspapers. In any case, they are most unlikely to be readers of business news. They may—and indeed do—spend a fair amount of time listening to the radio; but, generally, this is confined to the music of their favorite disc jockey. As for television, it is neither economical nor feasible for utilities to use this medium to communicate with young people. The message is far too complex to be told in 30-second or 60-second TV commercials.

The traditional booklet or brochure is not of much use, either. Almost without exception, this kind of printed matter is not prepared with schools in mind. Hence, it is almost useless to a teacher, and hardly ever reaches the classroom.

Yet, educational resources are wel-

comed by most teachers IF (and that is the operative word) the material is designed for classroom instruction, and IF (again) it is academically sound. Essentially, it must meet the educators' test: "What does the child need to know?" Not, what does the utility want to say.

Shifting Media Methods

Most importantly, in today's world, the public relations professional must become aware of changing media emphasis. Television has had a profound effect on all levels of the population; but none so much as young people. Children and young adults have been conditioned to expect their information to be packaged in audio-visual form. This is so in schools, and it is increasingly important in communicating with young adults.

Thus, motion pictures, film strips with recorded sound, slide presentations, and opaque projections are more and more essential public relations tools. Unhappily, this is frontier country for most utility public relations people, and an area they are not especially eager to explore. There still is a reluctance to embark on anything so expensive (and risky) as a motion picture. And, if it is undertaken, it frequently turns out to be a dull documentary that excites interest only among the company's management and board of directors.

Moreover, there is a distressing lack of understanding (or imagination) as to how a film should be used. Like a power plant, a film is earning no money on its investment unless it is being used. It is no economy to spend \$30,000, or \$50,000, or \$75,000 or more on a motion picture, and then limit distribution to a few prints for showing to stockholders and service clubs. Even films purchased in the form of prints, from industry sup-

"The River That Came Back" reveals the story of the successful restoration of Michigan's beautiful Au Sab'e River.

pliers, are a poor investment if they are placed in twos and threes and squirreled away on a shelf for use "in case somebody asks for it."

On the contrary, once a film is made it should be marketed aggressively to all possible users. This includes service clubs, civic groups, women's organizations, and schools, which are the usual audiences for industrial films. But it also includes television stations and (if the film is of an appropriate length and content) commercial motion picture theaters.

The economies of Hollywood film production are such that the theatrical short subject simply has disappeared. Movie exhibitors are always interested in good supporting "shorts," to be shown in conjunction with feature pictures. But there are few short subjects to be had. Thus, well-made industrial films with interesting content and a low promotional profile are eagerly booked by even the biggest motion picture theaters.

The Short Film Possibilities

Thus, it is both economical and practical to make shortened, "Reader's Digest" versions of longer industrial films, with commercial motion picture houses in mind. A 28-minute picture usually can be edited down by a qualified film studio to ten or twelve minutes, the length of a theatrical short. If it was produced originally on 16mm film, it can be transformed into a 35mm version by present-day optical processes, without loss of quality. Anyone doubting this, need only watch one of the Disney nature pictures on a big screen in any theater. All these were shot, originally, on 16mm film.

Good industrial short subjects are being exhibited regularly by first-run houses like the Radio City Music Hall in New York and others across the country. In the Middle West, for example, one utility has six titles in commercial distribution which have been seen by a combined total of more than 1,071,679 paid admissions. A substantial proportion of these are young adults who often bring their smaller children to sleep on the back seat of their automobiles while they watch a drive-in movie.

Television stations also are increasingly making use of good industrial films: often in well-viewed afternoon and early evening time, and occasionally even in prime time. These are telecast as a public service, without cost to the sponsor except the booking charge paid to a commercial film distributor.

Sometimes, a utility may find it profitable to buy time on TV stations to televise a film plus supporting commercials in prime evening time. This

was done with considerable success in Michigan in 1971 by Consumers Power Company, which sponsored a series of four half-hour specials. Broadcast at monthly intervals on Monday nights, just after the network news, the documentaries scored high Nielsen ratings and, on several stations, outdrew such network shows as "Laugh In" and "I Love Lucy."

But the most important audience of all is composed of students of all ages, starting in the elementary grades and ranging up through high school. The energy story, including the importance of energy in cleaning up the environment, is of vital interest to teachers of social studies, physical sciences, economics, communications, and other disciplines. For today's classroom, with its emphasis on audio-visual instruction, a well-made film or film strip will find ready acceptance; provided always that it has useful and timely information content, and avoids any suggestion of "hard sell." Moreover, utilization by teachers will be increased substantially if the audio-visual material is supplemented with printed matter such as a teacher's film guide, preshowing and postshowing test questions, and supporting textual materials designed for use in the classroom.

Hitting the Target

The experience of Consumers Power Company with just four film titles provides evidence of great teacher interest in timely industrial motion pictures.

In the twelve months ended June 30, 1972, the company received 2,061 requests for *The River That Came*

Back, a 28-minute film about the near-destruction and subsequent restoration of an important waterway. In the same period, there were 1,092 requests for *This Side of Tomorrow*, a 28-minute film about problems of urban decay; and 2,142 requests for *No Deposit, No Return*, a 28-minute film demonstrating that people need energy to overcome pollution.

In the area of third-party safety, the company received more than 2,297 requests for its nine-minute animated cartoon film, *Electric Safety from 'A' to Zap*.

To sum up: the well-made, intensively promoted industrial film is one of today's most effective means of reaching and informing what may be the most important audience of any public utility: those young people who are still in school, and young adults who are among those most likely to be attending motion picture theaters. The film strip, with recorded narration and sound, also is a highly effective audio-visual tool.

One thing is certain: The public relations problems facing utilities have become increasingly complex and frustrating. The old ways of communicating with customers and the general public, and—most especially—with schoolchildren who will become customers only a few years hence, no longer are effective. New methods, new techniques, and new ideas are necessary if utility public relations are to be successful.

Unless these public relations efforts do succeed, the future of the nation's energy suppliers may be difficult, indeed. □

"No Deposit, No Return" shows how easy it is to blame the other guy for everything bad. Here, an apartment dweller gives the garbage men a hard time—and gets some pungent advice in return.

There's No Sense Putting People to Sleep

Bullets whiz past your head. One hits a camera case. Revenue agents now begin to rush the moonshiners. You are on an actual raid. A startled pack horse rears. The animal upsets a box of blasting caps which an agent plans to use to dynamite the still before it is all over. Trying to calm the animal, the agent steps on a few blasting caps a few feet from you. Your ears ring as you start to film what you came for—the proper procedures for blowing up an illegal still.

You have to be kidding! Who goes through that for a safety film?

Better yet! Assume scene #220 is all you have left to shoot in your latest script. For numerous reasons you've saved this scene for last. It calls for a school bus to topple off a cliff. As a practical joke, a student holds a white mouse in front of a woman driver's face. She faints. The bus goes out of control and plunges into five feet of water in the river below. Fifty children are to swim out of the windows to safety. You've got the interior scenes in the can. The students falling, the driver fainting, the boy holding the mouse. As you arrange now to get the boy a tetanus shot and the mouse examined for ra-

bies because it bit the boy, you get a phone call. It's your production chief. He tells you to brace yourself. Why? The bus has disappeared in the water. "It's sunk. Vanished in seemingly bottomless quicksand or silt". You've got to think. The sun is almost setting. What to do? How do you keep on schedule? Keep costs down? The producer refuses to buy another bus for just one scene. How will you end the film.

Maybe a feature is fraught with such problems but not a safety film!

This may have been true at one time, but not today. I realize many film makers still feel that safety films are a breeze. "Simply string a list of safety tips together, get some super safe safety director type to go through the procedures on camera and you have it. In their eyes, nothing could be safer than making a safety film!" "Who's going to argue with safety?" *And it's true!*

Many veteran producers use a set formula. See one of their safety films and you have seen them all. The subjects may have been different but they all followed a basic pattern. It didn't matter what the subject matter was. They simply compiled a list of safety tips on a given subject, put them on 16 mm film lightly disguised with one of a dozen stock introductions and they had a safety film no one could criticize. They were easy to produce, too. Little in the way of production was needed. Since most producers had little or no experience staging action, they avoided such scenes. Besides, it saved money. Many safety directors went along, rationalizing that showing accidents or actual emergency situations would only put ideas into people's heads or teach them bad habits. Often it was a way for those in management to make sure they didn't ruffle labor, the unions, or focus too much attention on hazardous working conditions no one ever bothered to correct.

The result? Most safety films had a sterile antiseptic look. Since the safety

Gene Starbecker's company, Starbecker, Inc., provides script preparation and development and production services to 18 film producers and a number of government agencies and private American and international corporations.

"Surveys show that most people...feel safety films are dull, have no bizzaz, and honestly believe they are forced to see these oldies so their company can comply with safety regulations."

tips used never change, many safety films have never been updated. Consequently, many safety films being shown today still have female workers in "Bobby" socks and "Rosie the Riveter" work clothes. The men sport crew cuts and drive vehicles the Smithsonian is considering for display. The music on most gives the impression it was laid in by the yard from trims from "The March of Time".

Surveys show most people show this kind of safety film fall asleep. Most feel the films are dull, have no bizzaz, and honestly believe they are forced to see these oldies so their company can comply with local, State or Federal safety regulations. They find they are not relevant and are in no way motivated to care about, believe or remember the safety information imparted.

Safety people (especially the younger ones rising to positions of responsibility) realize this, and are eager to do what many of their organizations should have done—up-date and experiment with audio-visual techniques that will really motivate employees to develop safer habits. Most safety directors seek creative help from their film producers. Often it is the producer who resists breaking the formula developed over the years for safety films. However, judging from the number of requests I get to make safety films each year, it becomes apparent more and more film makers should discard outdated formulas and make films audiences can identify with today.

New concepts and safety slogans must be developed.

Most safety directors now realize any new films they make in the future must be more sophisticated, and cinematically of the quality of the TV programs workers and audiences watch nightly on television. It is because of this change in attitude that I find working on safety films extremely satisfying as a film maker. In recent years, the calibre of the safety films I am asked to make often offers me challenges comparable to those encountered working on many a feature

(and sometimes even more).

Case in point. Your next set up calls for a drunk to drive a car through an all night diner window. When all of the interior scenes of the drunk gulping coffee and talking to the counter man are shot, the owner of the diner has second thoughts about giving you permission to break the window. He refuses. You are in a spot. The actor, playing the drunk, leaves for Vegas in the morning and won't be available for a month. If that's not enough, a Hurricane alert is sounded. Storm warnings are posted. You decide to have

Scene from "And Then It Happened," a film designed to solve school bus conduct problems among teenagers.

your trusty grips construct a fake window in front of the actual one. Using the pane of glass you planned to replace in the owner's window, you quickly construct a fake diner front ten feet in front of the real one. The wind starts to play games, blowing over the fake store front before the car is in position. Twice, your crew catch the flats and glass before they hit the ground. The wind is almost up to gale force. Finally everything is ready. The lights are turned on. You give the cue to roll sound. The car plunges through the window. But as it does, a spectator (really "under the

influence") slips past a barricaded area set up for onlookers and trips on a light cable, causing a heavy light stand and Deuce to crash through the real diner window. The owner, now livid, wants his window replaced immediately. It is now 4 AM. Where do you get the glass at that hour? How do you stop the rain from coming in his broken window?

Getting such production value into a safety film on a shoe string budget and keeping the myriad of headaches associated with such action sequences to a minimum, should keep even the most imaginative film maker on his toes. Yet the results are well worth it.

If it's a challenge you're after, try tackling this one!

Your client is a stickler for realism. He wants you to rent the fourth largest bridge in the U.S. That's right. Take it over for a night. And then arrange to have a car dangle precariously over the rail. It takes some doing, but this you do. You even find two actors brave enough to go through their dialogue while teetering on the rail. You work out the optics and proper camera position. He wants you to start on an extreme close-up of the face of one of the actors as he talks and then pull back to reveal an extreme long shot of the car and the bridge. In the scene, the actor playing the drunk must open the door on the driver's side and fall into the water fifty feet below. And at night, no less! When every light is finally set and you are about to shoot, four cars on an adjacent span collide with one another. The drivers in each car, instead of watching the traffic, are watching you. The drivers give the police as the cause of the accident—your safety film. The police want you to turn off your lights immediately.

Never underestimate the complexities in doing a safety film either. Stunt men and special effects experts should be used. Trial and error can be disastrous. Danger lurks in the background on all safety films. Often where you least expect it. For example, let's assume you've carefully briefed your camera crew, the cast and skippers of

the boats involved in the Safety Afloat film you have in the works. You've gone over the potential risks and dangers involved. You want no one hurt. The next scene is dangerous—a gasoline explosion aboard a cabin cruiser. The insurance man, carrying the insurance policy protecting the producer on the production, smiles nervously. He nods his approval of your precautions and your plans to safeguard lives, etc. He wants to avoid a claim if possible. On cue, the cabin cruiser explodes. Debris flies everywhere. You quickly check the crew, the cast and the boat handlers—nary a scratch. As you give the word to print it, the insurance agent breathes a sigh of relief. Stepping backwards, he falls overboard. He can't swim.

For what it's worth.

Never attempt a safety film without getting everyone involved in the project involved. That goes for every crew member, every actor, every scene must help make your audience realize the importance of the information presented.

Always obtain the cooperation of the police, the fire department. It even pays to have an ambulance service alerted, too.

If you don't have sufficient production insurance to cover action sequences like those I've described, have your insurance broker write a special floater policy to cover you while you're shooting. On one project recently, the laboratory scratched the original. The producer's insurance company gave the producer a check to reshoot the entire segment.

There are no run of the mill safety films.

Keep in mind that the situations I've used are not unusual. In recent years to do the job needed, I've been asked to shoot underwater sequences as complicated as those you see on TV series like "Primos" and "Sea Hunt". I've wrecked more cars in a 28 minute driver safety film than you'll find destroyed in the "Grand Prix". For a series of films on Bomb Threat procedures, I was asked to create the same sort of excitement and suspense found in "Airport" and "Skyjack".

I've staged action on ski slopes to rival the impact of "Down Hill Racer". Sequences, designed to hold audiences spellbound and get them involved. Sequences calculated to make information meaningful.

As for results?

Time will only tell how successful breaking away from the formula approach will be. If the demands for prints are an indication, one of my clients sold 2,000 prints of one safety film to school systems. Another sold 1,500. A third 950. A segment of a new one just released was carried by a major TV network on the evening news. The subject and the handling of it was considered newsworthy. The publicity and credit given on the air will undoubtedly help sales. Many others have been released theatrically, as selected shorts. Most have won Golden Eagles in CINE competition. "And Then it Happened", I've just been notified, will be my 24th Golden

Eagle winner. A few of my safety films have taken first place for the U.S. in foreign film competition not only in the safety category, but as general entertainment films. Two this year were selected by the National Safety Council in their pick of the top ten Safety films of the year. Two others took top prizes at the Atlanta Film Festival this past August.

The rewards are many.

So, if you are looking for real purpose in the work you do in the film industry—take the production of a safety film seriously. If you make safety films regularly now, but are still using the old safety bromides, bury a good many of the over worked slogans which time has turned into trite phrases and come up with new ones. Instead of making a carbon copy of the last safety film your client sponsored, and one that will move people to act and recall what they have seen in an emergency. Make a good film, that deals with the world we actually live in, work in and play in. Make people aware, make them think. Show them why they should put the safety information you have presented to use. Dispel their misconceptions, burst their bubble of complacency, make them realize that if they think the film you've made is just another film—they may be making a big mistake. You may never know for sure whether your film helped minimize the chance of an accident. But if it could give just one person the "know how" to avoid an accident, the time you have spent will have been worth it. After all, what price can you put on a life? □

Seemingly innocent horseplay causes an accident in safety film, "And Then It Happened." Producer is Seven Oaks Productions, Silver Spring, Md.

Insurance Recruits Given Individualized Training Via Cassettes, Slides

At any one of St. Paul Fire and Marine Insurance Company's service centers around the country, at any time of the day, a fire and casualty claims trainee sets up a tape recorder, slide projector and paper screen on his desk. Then, after putting on a set of headphones, he listens to a recorded lecture, views automatically projected slides, answers worksheet questions and grades himself, oblivious to his surroundings.

He is undergoing a 16- to 18-week "at the desk" training program. Upon completion, he will have listened to 40 lectures, viewed 2,400 slides and completed examinations in adjuster orientation, insurance policy analysis, auto insurance policies, interviews and statements, insurance law, tort doctrine, principles of investigation, anatomy and injuries, liability evaluation and settlement negotiations—all while working at his job.

This training program was developed to meet the needs of St. Paul Fire and Marine's decentralized service functions. It was deemed advisable to supplement the formal "home office" training classes with an on-the-job educational program which would give each recruit identical training, regardless of where he was stationed or when he was hired.

"The problem was to get the training out to the people," said Leland D. Wedel, superintendent, claims education and training.

When cassette slide-synchronization recorders became available, Wedel determined that the audio-visual combination which it made possible provided the simplicity of operation, flexibility, pacing and motivation required for individualized instruction. "The cassette-slide system is an effective way to educate at long range," Wedel concluded. "It permits each person to be trained in his own environment, and in a situation which makes it more relevant."

He selected, as the heart of the system, a heavy-duty portable cassette

recorder with slide sync capability. Each Service Center was equipped with the recorder and a projector.

The text material, narration, slides and recorded cassettes were prepared by an audiovisual production house. A basic curriculum manual, which outlines the objectives of each lesson and includes worksheets and examinations, was produced by Wedel's staff. It also was responsible for a trainer's manual. The trainer, who usually is the Service Center's claims manager, serves as a consultant providing personal help and guidance.

"Feedback is that this method is a fantastic way to learn," Wedel said. It combines instruction with actual performance. It permits the trainee to pace himself. If his lesson score is low, he can repeat.

"This method has proved to be so satisfactory since its inception (April, 1971)," Wedel reported, that work is underway on programs covering property insurance and workmen's compensation and rehabilitation.

Each of the 10 segments of the claims training program consists of four cassette tapes and approximately 240 slides. Tapes average 25-30 minutes long. Slides are both informational and illustrative—for example, the section on anatomy and injuries includes

actual photos of various types of injuries.

To study, the trainee listens to the recorded lecture and views the visuals which are projected automatically in proper sequence as an inaudible recorded signal on the cassette advances the projector. He responds as directed by the lecturer on the worksheet, and grades himself by checking against the recorded answers.

The tapes, slides and manuals are checked out by the insurance company's home office library. When a trainee completes one course (completion is determined by his examination which is scored by the home office), the tapes and slides are returned to the library, which inspects them for damage. The trainee retains his work manual. The visuals and tapes can be updated with a minimum of effort at any time.

The system also has been found effective for group training, Wedel reported.

Not only is the cassette-slide method flexible and efficient, but it also is less expensive than some systems, Wedel noted. The investment includes the preparation and production of the material, the cost of tapes and slides for each course, and about \$400 per Center for equipment. □

A St. Paul Fire and Marine Insurance Company trainee undertakes an "on-the-job" educational program, using synchronized tape-slide courses in conjunction with worksheets and other text material.

The Care and Feeding of Writers

... in which freelance writer Frank Kerr searches for film themes among the olives.

We were in this cozy little college bar in Boston, trying to find a film theme swimming among the olives, and I knew it was just a question of time before he said it. Producers always say it to writers.

The place glowed with congeniality. The now generation swarmed happily around us—the long-haired now boys with their mincing gaits, the short-haired now girls with their truck driver swaggers—as we brooded in a corner waiting for an idea to strike.

Film themes don't surface easily, of course. We had already invested four olives fishing for this one—without results—and reached for a fifth. Rather, I reached. Producers, you see, don't drink.

The distorted-looking face wiggling beyond my olive and the gin-streaked window of my glass belongs to John Hynd. He runs a production shoppe called John Hynd Motion Picture Enterprises in San Diego, California.

You might say good old John has a pretty good handle on this filmmaking thing. He's won about every honor to come down the pike from the Cindv to the Diploma of Honor of the International Festival of Technical and Scientific Films in Belgrade (how about that for an award?) and BUSINESS SCREENS lauded one of his recent efforts, "St. George and the Black Falcons," as one of the most honored films of 1971. Anyway, John is learning, but he still has this one serious shortcoming.

John thinks like producers think. And he talks to writers like producers talk to writers. Discuss any subject from football to sex and invar-

iably he will say it. Like in that Boston bar.

"I don't want wall-to-wall narration this time," he said.

"Right," I said.

"The visual and the effects should carry the story," he said.

"Right," I said.

"You writers have a tendency toward diarrhea of the typewriter," he said.

"Right," I said.

"I want constipation this time," he said.

Constipation he wanted My aching assafoetida—which, of course, is fetid sap from a plant in Afganistan. Trouble with producers—and directors, editors, cameramen and soundmen, for that matter—is they don't understand and appreciate writers.

We're very special people. And clever.

You can tell we're clever by the adroit way I handled the bar discussion with John. We writers (or should it be us writers?) always agree with producers. We agree because they're the ones who hire us and pay us money and buy us drinks and things. We agree—and then we write it the way it should be written.

I've agreed with John about films all around the world.

While searching for a theme in tequila at Guaymas, Mexico, I've agreed with John as fiery señoritas danced around us clacking whatever it is that fiery señoritas clack while dancing in Guaymas.

While searching for a theme in Black Swan beer in Perth, Australia, I've agreed with John as tough RAAF pilots waltzed their Matildas past the table where we brooded alone over our work.

While searching for a theme in scotch and water in Kano, Nigeria, I've agreed with John as flies as big as birds buzzed around us and lizards the size of cats blinked (do lizards blink?) at us from the walls.

From the saloon halls of Paris to the swizzle-party shores of Bermuda, I've agreed with John about how films should be written—and then I've gone off and done my own thing.

Producers are enemies of the language. According to their philosophy of word constipation, that new-fangled whatchamacallit named the moving picture can tell a story all by its little self—provided you throw in a couple of dog barks for effect and an occasional musical stinger for mood.

Not so. You need words. Beautiful flowing, lyrical words that thread through the picture, tying it all together and disclosing to the guy in the audience why he should be sitting in a dark room filled with heavy breathing and eyeballs when he could be across the street having a few pops.

If you don't need wall-to-wall narration, then you must at least have some beautifully embroidered rugs of narrative scattered throughout. But you've got to fight for those scatter rugs because producers will try to thwart your every stitch and pearl (Is that how you make scatter rugs?)

Writers bubble with narrative poetry like fresh mountain springs (beautifully said, Frank). But while we can lead a producer to our fountains of crisp verbiage, we sometimes have to hold his head under to make him think. And we don't always succeed.

Spring them a classic like "and from out of the west with the thundering hoofbeats of the great horse Silver the Lone Ranger rides again," and they'd slash it to "the horseman, wearing a mask to hide his acne, rode east."

Or give 'em "who knows what evil lurks in the heart of men? The Shadow knows," and the producers—with commercial deference to today's race consciousness—would hack out "the furtive muckraker, of Polish not Afro descent, suspects everybody's crooked."

Ah for the golden producers of radio days. They understood.

Frank Kerr is a New England-based screen writer with a broad range of industrial and governmental credits

Modern producers should understand that writers are architects. We design the film, plotting its storyline construction, creating its narrative beauty, and everyone else involved is a carpenter to build the thing. (Ha! That'll frost 'em.)

Actually, we're wonderful, talented people, writers are, and we can create marvelous films when producers heed our brilliant advice. When we feel a film needs wall-to-wall carpeting, perhaps its visual floor is so dull it should be covered.

We're ready, willing and eager to do a good job for producers, if only they'd give a little thought to the care and feeding of writers. Such as—

- Say nice things to us once in awhile, such as "where'd you steal this great line in the prologue?" We need affection.

"Creativity is a tough job, and a good script can take as long as 30 olives just to get the first word on paper."

- Invite us to an interlock with all the other guys sometime. We seldom get a chance to say things like "that cut was lousy" or "the guy who made that zoom was as nervous as a in church." Remember, we feel lonely and insecure when we're not considered part of the team.

- Take us out for a few pops now and then to show your appreciation for our great talents. Pour some spirits into us and you'll be amazed how intelligent we become.

- Give us a little kind understanding when we miss deadlines. Creativity is a tough job, and a good script can take as long as 30 olives just to get the first word on paper. We can usually bang out a first word like "The" on three to six olives. But something profound like "In the beginning" can use up a whole barrel full.

- Let us help you decide between diarrhea and constipation. After all, paper is our sole contribution to the finished product, and who knows better than the thinker just how much paper will be needed?

All of which I tried explaining to John in that cozy bar in Boston. But he's like all producers. He just sipped his sarsaparilla and grinned that benevolent grin that producers use on writers. □

LA BELLE

AUDIENCE-RATED

AUDIO/VISUAL EQUIPMENT

... the right answer to your communication problems!

Sound-filmstrips offer greater retention than movies and cost much less to produce. Program revision—improving—updating and replacement are economically practical.

What is your communication problem? Is it a sales story, assembly instruction, employee indoctrination, employee training, worker guidance, public image, public information, or the new dimension in education? Look to a good, practical sound-filmstrip to do the job most effectively at lowest cost.

However, just having pictures and sound is not enough . . . there must be a dramatic, convincing presentation . . . and that presentation needs proper "audience-rated" dependable equipment.

LaBelle offers a reputable line of reliable, rugged audio/visual equipment.

- **35MM FILMSTRIP** with interchangeable programs.

LA BELLE COURIER® 1
Completely portable — rechargeable battery — instant play and replay.

LA BELLE SENTINEL 35
TV-like, self-contained for small groups or carrels.

- **SIGHT/SOUND SYNC**
Adds sound and activates visuals for remote control filmstrip or slide projectors.

LA BELLE PLA-MATIC 83
Compact — ideal for built-in applications. Continuous loop tape sound with inaudible activating signals.

- **16MM FILMSTRIP**

Featuring 3-WAY COMMPAK Cartridge: interchangeable in "16" Series.

LA BELLE COMMPAK
3-WAY* Sound-Filmstrip CARTRIDGE

Continuous loop visuals and audio tape in a permanently synchronized SINGLE cartridge. No threading, no setup, no rewind, no turnover . . . slip in the cartridge—ready to show—ready for replay.

New programs can be delivered in COMMPAK cartridges. Existing filmstrip or slide/sound programs can be adapted. Cartridges easily carried, easily shipped. Label, catalog, and store like books.

***1 LA BELLE COURIER® 16**
Portable, self-contained for personalized communication.

***2 LA BELLE SENTINEL 16**
Self-contained, TV-like for small groups, carrels, displays.

***3 LA BELLE TUTOR 16**
Large screen projected image. Clear visuals, convincing sound. Compact — easy to carry.

INDIVIDUAL BROCHURES AVAILABLE

Contact V. M. Ivie, Manager, Audio/Visual Sales, LaBelle Industries, Inc., 502 S. Worthington St., Oconomowoc, Wi. 53066. phone: 414/567-5527

Training Trainers in Making Media Decisions

Here is a system designed to help the trainer choose the right media for the job.

by PAUL H. CHADDOCK

ASSUMPTIONS

Media is seductive. It can add glamour—bring variety—add color—radiate “show biz”—and is often used inappropriately. This is probably true because trainers, having been introduced to some new AV medium for the first time, fall in love with that medium. For a while, everything comes out slides, or overheads, or TV, or whatever the medium happens to be. Using “what turns the trainer on” as the criterion for media selection has obvious pitfalls.

FUNCTIONS OF TRAINING

For purposes of reducing ambiguity, a better definition than “trainer” is required when it comes to discussing the functions he performs. Definable functions are Designer—responsible for design of instructional materials; Presenter—responsible for implementation of designed programs, usually in a classroom setting; Administrator—the “manager” of a total training function or department; Consultant—the trainer whose main responsibility is bringing advice to line managers for solving human performance problems . . . both training and non-training. The function primarily involved in media decisions is obviously Designer.

DESIGNERS' MEDIA INTERESTS

In order for a trainer to perform the design function, he needs to be able to answer questions on media such as When to use? Which is most appropriate? Which is best in assisting the trainee's learning process? What are the cost constraints? Which one

assists in approximating the job setting? What operational problems can be avoided? What are distribution requirements of the finished training program?—and all tissues impacting effectiveness and efficiency of the training.

Remembering that all training is designed to change behavior . . . behavior which when acquired is useful in some job setting . . . it is critical to first identify what behavior is required, design an experience for trainees to acquire the lacking behavior, practice it and then measure that the new behavior is working in the job setting. The following graphic and accompanying explanation illustrate one approach to this process.

DESIGN DECISION MODEL

The flow chart illustrated represents the steps a Designer follows when using a systematic approach to building training programs. It is not unique—many similar diagrams exist to illustrate the process—but it will hopefully be useful as a point of reference as we discuss the process in general and media decisions in particular.

The three sub-systems identify the empirical relationship that is critical to successful training design. In other words, trying to decide content or media prior to doing an analysis would be like the doctor who prescribes an operation and then asks, “Where do you hurt?” A brief run-down on the steps leading up to Design should give

Flow chart illustrating steps to a systematic approach to media decisions.

Paul H. Chaddock is Director of Manpower Development, Addressograph Multigraph Corporation.

me helpful insights and inputs when comes time to choose media.

Step 1 concentrates, not on trainees, not on currently successful performers, but on the job we want trainees to be able to do. The worker is observed at the job and what is recorded is what that skilled workers does . . . not what he knows. These recorded skills are labeled Job Performance Requirements.

Step 2 consists of re-wording those requirements into positive statements which includes (a) the performance, (b) the tools and/or conditions which must exist when that performance occurs and (c) some standard or measurement which identifies that the performance is done correctly. This latter could be time or accuracy or any indicator which shows acceptable performance. These are labeled Performance Objectives.

Step 3 is very similar to Step 2 except that the objectives are recorded, and perhaps grouped, into a "test" format. For example, a performance objective is "To type business letters from a dictation machine, in the company format, at the rate of 70 wpm, with no errors." An acceptable Criterion Test would be, "Given an electric typewriter and recorded correspondence on a dictating machine, the individual will type letters using company format at the rate of 70 wpm with 100% accuracy."

Step 4 is labeled Entry Level Performance. By administering Criterion Tests to "typical" trainees, the Designer can determine which Performance Objectives can already be acceptably performed. Those behaviors need not be learned. Those which cannot be performed represent Training Objectives.

Step 5 is the beginning of the Design sub-system. Not until Analysis is complete can the Designer be sure he is only concentrating on relevant and required behaviors. At this point, he is dealing with content and media decisions with assurance.

Content answers the question of what information, knowledge, opportunity for practice, tools, conditions and assistance the trainee will need at hand in order to learn. Media answers the question of how that content could be presented to best allow the trainee's learning process to occur so that the new behaviors can be performed in the job environment.

MEDIA DECISION DATA

If the suggested analysis has occurred, the Designer has learned a great deal which will assist him in making decisions on media. For example:

- What is the job environment like?

Dirty? Noisy? Is the work machine-paced, work group-paced, or does he control it? Will he work alone? Are there constant interruptions?

- How does the worker receive the information or condition which tells him to perform any given behavior? Verbally? Written? Over the phone? By a question? By machine function? By sight? By quality of the product? By a light flashing? By the color of a wire?
- What are trainee group characteristics? Long time employees? Age 25-30? Women? High familiarity with AV devices? Used to working alone? Studios? New to the job environment?
- What class of behavior is required? Motor performance and manipulation? Cognitive (knowledge, comprehension, analysis, synthesis, evaluation, judgments)? or Affective (valuing, feeling, attitude, appreciation)?
- What knowledge and perception need to exist? Is there a need to see relationships? Does motion need to be present? Can graphics help clarify? What discrimination is required? Is color an important requirement? How "close" to the job environment can media make the training?
- What trainee logistics are present? Where are trainees? How many? How accessible to centralized training?
- What are the economics? What is the organizational pay-off? (Saved hours, less overtime, reduced scrap, use of now idle equipment, reduced turnover, faster delivery, balanced books, smaller inventory.) Will successful training solve a problem? What will that save the company? What will it make for the company? Has a budget been dictated?
- Media availability? What AV equipment is owned, available? What is the condition of the equipment? Can trainers easily learn to use it?
- Cost-pay-off relationship? What are media production costs in relation to trained personnel pay-offs? How long-lasting will the need for training be? Will the training be applicable to many groups or is it a one-time situation? What in-house (or external) production costs are involved in relation to pay-off?
- What is the "show biz" scale? Does the company like movies? Does everything need to look

like Hollywood? Had you best use the new TV equipment?

The above is not intended to be an exhaustive list of questions which the Designer should now have answers to, but it does provide examples of the kind of information he should have learned through the analysis.

For example, if the program is teaching someone to fill out traffic slips in a transportation department and he receives his information by phone, appropriate media for practicing his skill on this part of the job might be: audio tape with simulated (on the tape) interruptions. Practice at gathering the critical information while dealing with interruptions will be a lot more "real" world than talking about it, or showing a filmstrip or showing overheads describing what might happen. Of course a tape-actuated telephone would even be better.

VALIDATION

The remaining steps on the model deserve a brief explanation. Developmental testing is just that. Does instruction produce trainees who can perform the training objectives? If yes—there is validity to the design. Implementation and Evaluation are inputted by Administration. The latter includes all necessary instructions to whomever will be the trainer on how to present the course. Implementation is the actual conduct of the program. Evaluation (over-simplified but nevertheless valid) answers the question, "Can the trainees now perform the job?"

SUMMARY

This has been a brief explanation of one view of how to train Designers to make better media decisions. The whole argument can perhaps be best summed up by looking at the process as an equation. A movie is a solution. The need for a movie to enhance the learning process in a training program is a problem. The secret is to match the right solution AFTER defining the problem.

All forms of audio visual techniques and instructional strategies such as programmed instruction, case studies, and games should be viewed as solutions. In that context, they are like the doctor's black bag, full of medical "miracles". The doctor knows what's there, what each can do, but he doesn't prescribe anything until he determines the problem which needs to be solved. The trainer should view all audio visual and other learning devices as aids to learning. Once he's defined the learning need, he can more appropriately choose media. □

Background: Founded in 1911 (as "The YMCA
Motion Picture Bureau", a division of the In-
ternational Committee of the YMCA's), As-
sociation Films was the first sponsored film
distributor in America. In 1949, the company
was incorporated as an independent distribu-
tion service. In March, 1970 Association Films
merged with Sterling Movies, Inc. to become
Association-Sterling Films, a Division of As-
sociated Films, Inc.

Services: Promotion and Publicity: Promotes
sponsored films through catalogs, special
supplements (directed to teachers and pro-
gram chairmen), advertising in educational
and adult journals, individual film brochures,
exhibits at conventions, publicity services.
Print Inspection and Maintenance: prints are
electronically cleaned and inspected after
each use; repairs are made as needed and
replacement prints ordered on sponsor's au-
thority; scratched prints are given Perma-
New treatment, as authorized. Monthly Re-
ports: sponsors receive detailed performance
reports (data processed) which give audience
size and composition; film user evaluations
and comments; course of study where film
was used; bookings and showings (current,
year-to-date, and cumulative); summary of
coverage by states; and other data about per-
formance and audiences. Programming Ser-
vices: confirmation and advance booking no-
tices are sent to users and sponsors on a
daily basis; bookers assist organizations in
arranging programs and special distribution
concepts (Movie-A-Week, You: the New Con-
sumer, Vacationland Cinema, Cinema La
Carte, Showcase Cinema etc.) Library Ser-
vice Plan: a professional "physical handling" ser-
vice for sponsored film libraries that provides
all regular services except promotion, as de-
sired) and includes Sponsor Imprinted forms.

Association-Sterling TV Division: This division
is responsible for the distribution of spon-
sored films to commercial and educational
TV stations. It maintains daily contact with
TV programmers, creates sponsored film
series and special concepts, prepares TV pro-
motion kits, publicizes sponsored films in
"TV Guide" and local newspapers and dis-
tributes newsclips and scripts to TV news
department.

Association-Sterling/35 (Theatrical Division):
A nationwide service for the distribution of
sponsored short subjects to motion picture
theaters. Association-Sterling, working with
theatrical booking services and distributors
in 31 exchange cities, supervises promotion,
selection of theaters and future films, con-
centrating on first-run theaters in major
cities and suburbs.

Creative Programming Services: Creation of
specialized communications concepts for
sponsors, including Theater Cavalcade, a 10-
minute theatrical series with five participat-
ing sponsored segments in each issue; Inter-
view, a videotape "talk show" service fea-
turing sponsors' representatives; TV Tempo,
3 to 5 minute TV news features for syndi-
cation to news and special events pro-
grammers; Radio Tempo, News and feature
programs distributed to selected radio sta-
tions and News Screen, development and/or
distribution of 60 second news and news-
feature clips to TV news programs.

Vancouver 9 B.C.: D. Fraser McRae, Associated Visual Services, 1590 West Fourth Ave., (604) 736-4471

Background: The outgrowth of a pioneering program in the field of talking motion pictures by Electrical Research Products, a subsidiary of Western Electric Co., formed in 1927, Modern Talking Picture Service first merged as the nontheatrical department of that company. Modern's present name was adopted by its licensees in 1935 and Frank Arghaus, then of ERPI, was placed in charge of this growing activity. Modern became an independent corporation in 1937 under the ownership and management of its distribution employees. In 1969, Modern was acquired by KDI Corporation of Cincinnati.

Channels of Distribution: Modern represents more than 700 organizations from industry, commerce and the professions. Corporate and public information films are circulated to the general and specific groups through channels throughout the U.S. and Canada.

Community Groups and Schools: Over a million bookings are made each year to community groups and schools.

Television: TV stations make regular use of sponsored films and seven of Modern's regional film libraries have a print inventory of TV staff to serve the needs of station in their areas. In addition, Modern distributes and 60 second newsclips to TV stations throughout the country.

Theatrical: Movie houses use entertaining sponsored shorts to supplement their feature programming.

Resort Cinema: Through this operation, prints are circulated to resorts, motels and family playgrounds in a given circuit. The films are assembled into programs and delivered to the resorts by Modern representatives. In all, a total of 1500 resorts are covered by a nationwide network of 40 circuits.

Airport Cinema: Another of Modern's innovative extensions of non-theatrical distribution maintains free movie lounges in major airport terminals. Films provide waiting passengers with continuous entertainment and information.

Video Tape: Modern distributes sponsored video tapes to schools, colleges, industry and other audiences.

Infilm: Modern is the member for the United States and Canada in Inforfilm, the international association of informational film distributors.

College Cinema: Modern operates movie lounges in Student Unions on many campuses.

Formal and Special Services: For sponsors utilizing its service, the company promotes, ships, cleans, repairs, maintains and stores their films. Additionally, it counts audiences, attendance, records their comments and furnishes the sponsor a monthly tabulation. Extensive data processing facilities and equipment for promotional printing are maintained at the National Service Center. All regional libraries are equipped for electronic film injection and handling. In addition, Modern distributes and help create supplemental material for films. Thus, at a very nominal cost, a sponsor can greatly increase the impact of his message.

MODERN MEDIA SERVICES DIVISION
1212 Avenue of the Americas, New York, N.Y. 10036

Phone: (212) 765-3100
Fontaine Kincheol, Jr., Vice President & General Manager

This division was formed in 1971 to enable the company to move and grow with the current film utilization explosion and to capitalize on the many opportunities that will result from new technology such as CATV, TV, video cassettes and cartridge projec-

WE HAVE THE EDITING MACHINE

Association-Sterling does more...

than simply provide superior
film distribution service!

Today, America's premiere distributor of sponsored films offers clients a multi-media mix enabling them to extend audience reach in communication concepts that make demographic dollars and sense. Some of these exclusive new services are

THEATER CAVALCADE

Is "cinema journalism" offering sponsors prime opportunity to reach movie-goers in a high-impact newsreel format in first-run theaters. Estimated audience: 1.5 million.

NewsScreen

Provides interesting newsworthy 16mm clients' stories to TV stations for use in their news programs. Stations rely on ASF for these 60 second features.

TV TEMPO

TV featurettes for local live programs using 3-5 minute stories for women's programs and talk shows. Your short story becomes integrated part of local shows.

RADIO TEMPO

Provides 3-5 minute feature stories for 750 select radio stations. ASF syndicates them in complete package including scripting, talent, recording, discs, mailing, etc.

PSA PLACEMENT SERVICE

A special TV and radio service for sponsors of public service announcements. ASF develops stations' interest, schedules usage and provides detailed audience reports.

interview

This innovative concept makes possible interviewing of company official on local daytime TV talk shows and women's programs by live host in 5-7 minutes.

Motion Pictures - TV - Audio - Visual

Maybe you're shooting documentaries. Or features. TV news. Or commercials (live or animated); travelogues; sports; wildlife; educational films; macrocinematography or cinephotomicrography, you name it. Bolex can provide you with exactly the right camera body, lenses and accessories to assure you'll have just what you need when you need it. (And at prices that may surprise you with their economy.)

The cameras: You get to choose from five rugged camera bodies designed for hand held or tripod use. With either three-lens turret or bayonet mount, with spring motor or electric drive, with 100' to 400' film capacity, for silent filming or sync sound with sync pulse generator or crystal. And that's just the beginning.

Consider features like: automatic threading, flickerless reflex viewing and focusing with complete depth of field control, a filter slot behind the lens, single-frame counter, unlimited film rewind, variable speeds for accelerated and slowmotion filming, single frame filming, variable shutter with automatic control possibility, registration claw for total accuracy in picture steadiness even when films are blown up to 35mm.

THE WHOLE SHOOTING MATCH.

The lenses: With the Bolex system, you can choose from 7 fixed focal length lenses, ranging all the way from 10mm super wide angle to long 150mm telephoto. And they all have built in macro focusing, automatic depth of field scales and diaphragm presetting so you can step down the aperture without taking your eye off the reflex finder. You can choose a lens as fast as $f/1.1$, or one that can focus down to one inch without accessories.

The system offers you seven zoom lenses with zoom ranges from 5:1 to 10:1. One of those is the Vario Switar 100 with built-in power zoom, automatic light measuring through the lens, focusing as close as four feet and picture sharpness equal to any good fixed focal length lens.

The works: You can extend your basic equipment almost indefinitely with a wide range of accessories.

For instance: if you choose a spring-wound camera, you can automate easily with any one of four auxiliary motor drives, for time-lapse or animation, for variable speed shooting or for filming with sync pulse generator or crystal. The system offers you tripod; monopod; camera grips; blimps; an automatic fading device; cable releases; matte boxes (complete with masks); an underwater housing; attachable exposure meter; 400' magazine; closeup lenses; extension tubes; optical magnetic sound projector.

It's quite a list. But that isn't all. The full story of Bolex's whole shooting match fills a 32 page book. Which we'll be happy to send you. Just write to Paillard Incorporated, 1900 Lower Road, Linden, N.J. 07036. You'll get a very professional response. Other products: Hasselblad cameras and accessories, Hermes typewriters and figuring machines.

Slide Film on O.S.H.A. Unsnarls Law's Complexity

Liberty Mutual film visualizes new Occupational Safety and Health Act for policy holders.

"Ignorance of the law excuses no man; not that all men know the law, but because 'tis an excuse every man will plead, and no man can tell how to confute him."

*John Selden
English jurist
1584-1654*

That mysterious and sanctified realm of the legal fraternity is in danger of being understood by mere mortals.

There's now a better way, as the commercial goes, of unsnarling the complexities of the law for lay understanding—visualize its scope and impact.

The Philadelphia lawyer set should welcome visual law as an associate, not a threat. And the professional implications for audio-visualists across the land are obviously far-reaching.

Audio-visualists of the Liberty Mutual Insurance Company have proved the value of visual law by producing a highly lauded filmstrip explaining a complex new federal statute.

Their challenge was to digest the law, decide how it could be presented most effectively to employees and policyholders, and have it ready to go all within less than a month's time.

The law's formal name alone reveals the challenge they faced: "Public Law 91-596 91st Congress S2193 December 29, 1970, The Occupational Safety and Health Act of 1970."

Liberty Mutual was vitally concerned with the new law and its impact. Since its founding in 1912, the company has specialized in occupational safety—in fact, its first employee was a safety engineer. It is the largest writer of workmen's compensation insurance in the nation.

The law, called OSHA for short, superseded a variety of other work-safety regulations and directly affected many of Liberty's policyholders. It was complex, far-ranging and with biting teeth that called for penalties up to \$20,000 and even imprisonment.

The Company felt a responsibility to inform its policyholders about the law and what they would have to do

to comply with it.

"We decided on visuals from the start," explained Harold Read, the Company's audio visual director. "Law is always complex and generally dull, and we felt that visuals would have the greatest impact and make the strongest impression."

Deciding to do something is the easy part—making it happen is quite another story. You don't just digest a law, slap together a few hundred slides and disseminate them to an audience of thousands overnight.

Read's organization was prepared. With nine full time employees and three part time specialists, his audio-visual unit routinely visualizes all aspects of insurance. They produce more than 1,000 projects a year, ranging from single transparencies to video tape productions to motion pictures.

But output is only half the story. Visuals, of course, are useless unless they are seen. To make sure his software output has sufficient hardware outlets, Read long ago implemented a corporate-wide standardization program for visual equipment. The slides, filmstrips, video programs and films that flow from headquarters in Boston are assured of screening throughout the Company.

For the first round of the OSHA presentation, Read selected slide/tape as the most effective format. It would be presented throughout the Company by Coxco cassette recorders with automatic advancing signals.

This would allow him to test internally audience reaction at minimum cost prior to investing in sound filmstrips for external showings.

Time was Read's biggest obstacle. Top management decided on the visual information program May 12 and wanted it ready for distribution by July when the law went into full effect. But first they wanted the presentation reviewed by its Advisory Board members.

Advisory boards serve a vital role in Liberty's approach to communications. The company invites counsel from 25 boards of business and industrial leaders scattered across the na-

ion. They meet regularly, offering expert advice on how and what the company should be saying and doing.

Because the size and tight schedule of the OSHA presentation would have upset normal in-house production flow, Read turned to the Boston production firm of Atkins and Reilly to lend a helping hand.

After preliminary screenings for Home Office executives, who made minor changes, the presentation went before the advisory boards on schedule and passed with flying colors. It was then processed to filmstrips and distributed through company offices across the nation for internal and external consumption.

Reception has been enthusiastic. With 150 filmstrips in circulation and more on order; "The demand is so great we're having trouble keeping up," said Roy Hendon, assistant vice president in the Company's Loss Prevention Department.

Hendon's organization, whose primary concern is the prevention of accidents and losses, was instrumental in launching the program to visualize the new law. It is now largely responsible for conveying the information to the 36,000 business policyholders who carry W.C. insurance with Liberty.

To cover the nation as extensively and rapidly as possible, the presentation is being disseminated through a network of 42 field offices plus two "mini-theater" mobile units that constantly roam the country. Field managers arrange screenings for businesses within their areas, and the audiences range from a single executive to as many as 500.

The presentation has now evolved into two visual sections. A 12-minute filmstrip explains the basics of the new law. Then supplemental slides or transparencies are used to review the specific rules, regulations and requirements under the law, and to keep posted on the latest changes to the statute.

"The OSHA project is a perfect example of the value of visuals," Read said. "We were able to make a highly complex subject interesting and understandable. In the doing, we performed a vital service for our policyholders while at the same time enhancing the reputation of our Company."

"We proved that the law, no matter how complex, can be visualized and it's obvious that visual law could be an important answer to correcting ignorance of the law. From our experience, audio-visualists could and should perform a vital role in translating law into understandable language." □

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it. Why settle for less than the best? Call Reela now.

REELA OFFERS:
Complete editorial services • complete producer's services — animation — titling — sound • complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming • Super 8 printing and cartridgeing.

dealers all over the country by Ciba-Geigy Corporation's Agricultural Division.

Ciba-Geigy has been studying the works of Iowa State University sociology professors and rural psychologists. Dr. George M. Beal and Dr. Joe M. Bohlen, and has determined that their ideas and findings about how and why farmers buy will be important aids in making better marketers of Ciba-Geigy dealers. The company first engaged Beal and Bohlen last year to conduct all-day seminars for groups of dealers in the midwest. But as the demand for the seminars increased, it was decided to film them and to travel the presentation country-wide to reach as many dealers as possible.

Audioimage, Inc., of New York, was selected to put the story on the screen. Producer/director Tom Baldacci and Ciba-Geigy's management team on the project (Fitzhugh Lee, director of Agricultural Sales; Nick De Manczuk, Director of Advertising and Promotion; John A. Mullins, Director of Marketing; and Anthony J. Adolfi, Manager of Public Relations) determined early that there was no way to just condense the seminar by merely transposing it to the screen. Instead, they devised a treatment of cutting from Beal and Bohlen making their salient points on screen with the seminar graphics, to actual interviews with farmers shot on location and backing up what the rural psychologists had to say.

Professor Beal and Bohlen have established that farmers adopt new methods and new equipment and supplies by a process of diffusion. First to try new techniques are *The Innovators*, often large acreage farmers getting information about new techniques from beyond the community. Innovators usually come from established families, belong to national organizations, and make decisions regarding next season's chemical use during this year's growing season.

Secondly are *The Early Adopters*—younger, better educated than most farmers, avid seekers of information, who generally decide what chemicals to buy for next year during the harvest.

The Early Majority has above average experience, attends meetings, wants to be sure to try things out carefully before adopting a practice. This type is often the informal leader that most farmers will follow. He tends to buy his chemicals in late winter.

The Majority is the average farmer. He generally has less education; attends some farm meetings, but not as many as the Early Majority; and usually will not try something until his informal leaders have tried and proved it out. He waits until just before spring planting to purchase chemicals.

Armed with this practical psychological assessment of farmers' buying habits, Ciba-Geigy dealers can direct their sales efforts at the farm leaders—the Innovators, Early Adopters and Early Majority—who can be important influencers in determining the activities of whole farm areas.

Whereas the physical limitation of reaching dealers through the live seminar method would have limited Beal and Bohlen's presentation to something like 2,000 dealers, Ciba-Geigy now expects the *Adoption Process* film to be seen by almost all of its 14,000 dealers within the next six months.

Professors George Beal and Joe Bohlen of Iowa State University explain psychology of farmers' buying habits.

Actually, the *Adoption Process* film is three films, each approximately 18 minutes in length, and constructed from over 20,000 feet of live-sound documentary footage of farmers shot by Tom Baldacci and crew all over the country. The seminar portions were photographed by side-lighting Beal and Bohlen while an Ektalite high-luminescent screen was placed as an illustrative panel between them. On this screen, during filming, slides made of the live seminar flannel board presentation were projected from two Ektagraphic slide projectors fitted with a Spindler & Saurpe Dynamic Dissolve control and set up adjacent to the motion picture camera. The technique proved to be most effective and economical.

Ciba-Geigy has equipped its 200 Agricultural Division salesmen with Fairchild Seventy 07 Super 8 sound projectors which can be set up easily in meeting halls, showrooms, or wherever dealers can be got together to discover how the psychological aspects of the adoption process can help them provide more information to the farm community and reap more sales.

Sickle Cell Anemia. What's That?

A friend once suggested to filmmaker Walter Lee that he might be interested in a locally televised panel discussion on sickle cell anemia.

"Sickle cell anemia. What's that?" Lee asked.

Lee watched the program and was inspired to make a motion picture about the inherited blood disease that is amazingly prevalent among people of African descent.

Lee, who is employed in the Photographic Illustrations Department of Eastman Kodak Company, believes his film, due to be released soon, is uniquely valuable in communicating vital information about sickle cell anemia to black Americans and other interested persons.

The film explains what sickle cell anemia is, how people can find out if they have it, and how it is transmitted from generation to generation. Lee, 30, who is black, believes that persons who have the disease should know it so they can make intelligent decisions about having children, about how to protect themselves from strenuous activity at high altitudes, and how to avoid certain forms of anesthesia.

Lee's film has been reviewed and praised by the New York State Department of Health and local health authorities. Lee credits Dr. David Satcher, a young black doctor at Rochester's Strong Memorial Hospital, with providing much of the medical expertise he needed to produce a totally accurate film.

Lee spent eight months of his leisure time and about \$2,500 of his own money making the movie. He received substantial professional assistance from co-workers at Kodak, and the scenes were shot in Kodak's motion picture studio, which was made available to Lee on occasional evenings and weekends. The film is narrated by Leroy Johns, a fellow Kodak employee.

The sickle cell anemia film was a family project for the Lees. Walter and his wife, Everline, have three children, all of whom appeared in the movie. The Lee's son Mitchell, 3, was featured. Mrs. Lee did all the clerical work associated with the film.

Lee hopes that his film will be shown on television, at schools and colleges, and in community centers in the nation's urban areas where it will get wide exposure among black Americans. In order for the film to be distributed widely, Lee will need funds that are presently not available. However, inquiries about bookings may be addressed to him at P.O. Box 1367, Rochester, N.Y. 14603.

**IT ISN'T AN ORIGINAL SCORE . . .
IT JUST SOUNDS LIKE ONE!**

The DE WOLFE MUSIC LIBRARY swings you completely away from that old, tired "canned music" sound. We're constantly combing the music world here and abroad to record all the contemporary sounds of today.

Whether it's an 8-second TV commercial or an 80-minute film, DE WOLFE has what you need. Cool. Young. Classical to modern jazz and rock. You name it.

the magazine. But think what that means... if the editors weren't the kinds of people they are, they would never have commissioned the column in the first place, or continued it for the last two years. If this is the best thing in the magazine, it simply reflects the wisdom of the editors and publishers who elected to include it as a regular feature. Furthermore, a column written by a professional writer *ought to be* better written than stories written by producers, equipment specialists, or other technicians in the film industry.

New York City is not a jungle, but you do have to *fight* to survive in it. The film industry is not a jungle, but you do have to *fight* to survive in it. And sometimes... in order to fight... you have to become *very* angry. I get a lot of great fan mail answering these columns of mine, and that mail proves to me that people in the film business like what they're doing... like the business we're in... want to make it better... and most important of all... they really read this magazine from the first page to the last including the ads! They don't always agree with it... but they really read it word for word, and... it helps them fight in order to survive. □

camera eye

continued

comings and begin to point up positive ideas on what we can do about them? Shades of Lincoln Steffens, Ida Tarbell and Upton Sinclair!

Better to have our young people set right than to let those who wield the tar-brush regardless of truth dominate the platform.

An entire film program could be devoted to factual consumer education on what goes into products, how to properly evaluate and use them. Retiring craftsmen are leaving gaping holes in such economies as the printing industry, building, etc. Where's the appreciation of true skills fortified by real desire to understand how modern technology has revolutionized such fields. We need far less college graduates than we do builders, printers, electricians, service men, etc.

Kemper Insurance made a great film contribution to better appreciation of those charged with law enforcement. Which sponsor is going to continue to provide films on paramedical, para-legal and other fields so desperately short of concerned personnel?

Our space is limited so let's turn to how to get such films created and then how to recover the corporate investment: in goodwill, better relations and real income.

Unless your in-company audiovisual operation is geared up to turn out truly professional motion pictures worthy of the user's time and money, turn the outline of your objectives over to one of the proven producers who have provided background on their work and facilities in this publication. You can go through two customary phases: buy the complete script from a professional film writer and then place the approved script with the producer whose recent samples show competence and whose financial statement shows the ability to *deliver your picture*.

You *must* have a widely-useful film, with obvious content values to relevant groups, institutions, etc. and think of that picture as an investment. Fortify it with the kind of mail promotion to inform and *sell* these prospective print users.

Then you can go several proven routes:

1. Turn the property over, after pre-production consultation on its values, marketability, etc., to a nationwide film marketing group like Modern Learning Aids, etc.

2. Or publicize and promote it directly to the nation's schools, hospitals, labor groups, etc., according to its relevant interest.

Such films can expect return-of-costs in several ways: by leasing the prints at cost to prospective users (protecting its content against change); by outright print sales w/ royalties to the sales group; or by national or regional "free" distribution, if you're satisfied that the company already has its "profit" in getting the message through.

Historic labor leader Samuel Gompers once said "The worst crime against working people is a company that fails to make a profit."

Some of today's labor leaders like to forget that admonition.

And Frank Barnett, chairman of Union Pacific Corporation, comments "Our society has grown so complex it is beyond the easy solution to any problem." So find the hard solutions and work on them with the most positive and powerful means in today's world: *a good film that enters into the hearts and minds of those whom we need to inform.*

We disagree with Darwin E. Smith, chairman and president of Kimberly-Clark Corporation who says he finds that his firm is increasingly affected "by political and economic changes over which we have no control."

What has his company done recently to try to assume some control over the most-relevant changes where *facts* might make a difference?

It's a matter of life and breath

Give more to Christmas Seals

Fight emphysema, tuberculosis, air pollution.

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Super 8 Projector

MPO VIDEOTRONIC PROJECTOR CORP. has introduced a smaller, lighter, briefcase-sized version of the company's Super 8 automatic projector. The Compact measures 14½" by 10½" by 5½" and weighs a pound less than its predecessor. Screen size is now 11½" by

8½". A new plug-in 5-watt amplifier, NTC lamp circuit, double-claw pull-down action and increased sound drum rotating speed are new internal improvements. Outside are a new, more rugged door and screen assembly top cover. 305 East 46th St., New York, N.Y. 10017.

Filmstrip Projector

LA BELLE INDUSTRIES INC. has updated its Courier 16 self-contained portable projector with new features. A Film Advance/Reverse Switch now replaces advance and hold buttons, allowing the operator to not only advance, but to reverse and return to any desired visual

segment of the program. Stop and start buttons permit stopping at any point with either dark screen or lamp on. Other new features are external focussing and an adjustable tilt leg. 510 South Worthington St., Oconomowoc, Wis. 53066.

DU KANE CORPORATION has announced a new 35mm continuous film-

strip projector, the Vista Show, designed for use in stores, lobbies, trade shows, etc. Available in two screen sizes, as illustrated. 2900 Du Kane Drive, St. Charles, Ill. 60174.

Sound Page System

3M COMPANY has introduced a new teaching system which combines visual material on one side of a page and magnetic recordings on the back. Trainee views words or art from any source,

while magnetic recording on reverse provides up to four-minutes of sound. Duplicate recording sheets can be processed in five seconds. Price for projector-recorder is \$289. Dept. V2-20, Box 33686, St. Paul, Minn. 55101.

Super 8 Viewing System

TECHNICOLOR, INC. has developed a new Super 8 sound projection system for merchandising use called "Instant Theater." The system consists of a rear-

screen viewing unit and a removable projector designed for use with continuous loop cartridges. 299 Kalmus Dr., Costa Mesa, Ca. 92626.

Microphone Rental

THE CAMERA MART has acquired the first R-1011 Sennheiser Mikroport H-F wireless mike available for rental in the U.S. Transmitter has a power rating of 200 mw, operates on two crystal controlled frequencies or is tunable between 148 and 178 MHz. 456 West 55th St., New York, N.Y. 10019

Slide Projector

POLACOAT, INC. is now marketing the Realist Super Light Slide Projector in two models: 1200-watt tungsten and 500-watt

Xenon. Lumen output is 2½ times that of standard 500-watt projectors. 9750 Conklin Rd., Cincinnati, Ohio 45242.

MONTAGE PRODUCTIONS INC. has announced heavy-duty "Lifemaster" versions of Kodak Ektagraphic slide projectors designed for continuous unsuper-

vised operation. Both units (one has automatic focussing) are guaranteed for 4,000 hours of use, or for million slide changes. 9 Industrial Drive, Rutherford, N.J. 07070.

16mm Viewer/Editor

MAIER-HANCOCK INDUSTRIES has announced a new heavy-duty 16mm Viewer/Editor, Model 16-H equipped with halogen lamp which provides four

times more light than the conventional incandescent. Operates in both directions, from left or right. Price is \$205. 13212 Raymer St., North Hollywood, Ca. 91605.

Tripod Heads

NATIONAL CINE EQUIPMENT, INC. has introduced three new tripod heads. The "Schizophrenic" is designed for the Eclair NPR as well as other cameras with

conventional configurations. The Hydro-uid "mini" is lightweight, designed for cameras up to 20 lbs. Model CGH Cradle Gear Head will accept cameras up to 30 lbs. 4140 Austin Blvd., Island Park, N.Y. 11558.

Projection Lens

UHL OPTICAL COMPANY has introduced a new variable power optical module production system which converts prime lenses to exact screen-filling focal lengths. The range can be extended to

Elco Optisonics Division Moves to Tucson Facility

Fleo Corporation's Optisonics Division, which manufactures and markets a growing line of audio-visual products, has moved to an expanded facility in Tucson, Arizona.

Elco recently purchased the manufacturing and marketing rights to A. B. Dick Company's Super 8mm motion picture sound projector line.

Another new product to be manufactured in Tucson is Elco's MCR-100 multi screen format sound projector which enables the user to select his response to a question or a problem. The MCR-100 has previously been marketed by Multi Channel Response Corporation which Fleo has agreed to purchase.

Elco is based in Jenkintown, Pa. The Optisonics Division had been headquartered in Montgomeryville, Pa.

New Fast Air Freight Service for Films and Tapes

Companies that utilize video and audio tapes as well as motion picture film now have the means to move these high priority items between twelve key U. S. cities during the span of a normal business day.

Emery Air Freight has inaugurated a new "V.I.P." Service through which shipments picked up before noon in Atlanta, Boston, Chicago, Dallas, Detroit, Kansas City, Los Angeles, Miami, New York, St. Louis, San Francisco and Washington are assured delivery prior to the close of the business day in any destination city within this group.

An Emery spokesman said that a premium rate schedule has been established along geographical lines for the V.I.P. Service which was termed "only a step removed from personal courier service—and considerably less expensive." Air charges for V.I.P. handling range from \$20 to \$35, with a \$15 special pickup and delivery charge at origination and destination points. These charges are in addition to Emery's normal tariff rates.

There are no weight limits. A typical five-pound shipment moving between New York and Los Angeles on a same-day V.I.P. handling basis would incur a total charge of \$78.32. The service, operational since Sept. 10, was put to the test on a trial basis for over two months. Ninety-seven percent first day service was achieved on more than 500 test shipments. Emery reported.

Robert J. Higgins has been named Advertising Market Manager for Norelco Training and Education Systems . . . **Singer Company's** Graflex Division has promoted **Patrick V. Gillette** to the position of Vice President of Marketing. **Barbara Blair Legg** is the new Vice President-Creative Director of Paragon Productions, Washington area production firm . . . New manager of Motion Picture Laboratories Motion Picture Equipment Sales and Rental Division is **W. A. "Buddy" Morgan, Jr.** . . . **Wallace Pohring** has been appointed Eastern Service Manager for Eclair Corporation of America. He was previously with Cinema Beaulieu . . . **Lawrence A. Murray** has joined Modern Talking Picture Service as Sales Promotion Coordinator . . . **Anthony Guarco**, recently retired Assistant Acting Director of United States Information Agency, has joined Capital Film Laboratories, Washington . . .

How to Produce and Distribute Sponsored Short Subjects

With the current boxoffice boom being led by such successful features as "The Godfather", many corporations are taking a renewed look at the potential for soft sell commercial or public relations messages which can be communicated by sponsored short subjects. To help these corporations and their film producers the Association of National Advertisers has published a report on "Production and Distribution of Theatrical Short Subjects".

The report, written by film producer Mario Ghio and developed under the auspices of the A.N.A. Audiovisual Committee, describes the creative considerations, the methods and channels of distribution, production guidelines and other factors contributing to a successful short subject. Appendix tables list major theatrical, non-theatrical and overseas distributors, theatrical admissions statistics and other audience data.

Copies of the 16-page report are available to A.N.A. members at \$1.00 per copy and to non-members at \$3.00 from: *Publications Department, Association of National Advertisers, Inc., 155 East 44th Street, New York, N.Y. 10017.*

Dear Leo:

As I promised last week, here are a couple of frame blow-ups from recent games... plus a shot that proves I'm still pretty active.

[illegible]

Of course, the camera's endurance is also a factor. We've had several since 1966, and haven't replaced a worn part yet. With an average of about 500,000 feet through each camera since then, and just regular preventive maintenance, that's pretty good. It's even better when you consider that we take them everywhere from icy Green Bay winters (one day last year it was -130°) to over 100° coming off the Dallas Astro turf.

Last year, thanks to your quiet little ACL, we'll be taking viewers right into the bench area and sideline huddles, shooting as close as 2 feet with a small zoom. The 'crew' will be one man with an ACL and a small recorder. Our pre-season tests prove that the players forget we're around.

Our pre-season tests prove that the players' bodies

Very best regards.

Dave McGee

The gruelling 'sport' of *filming* professional football demands faultless reflexes and endurance. In the crew. And their equipment.

How well these challenges can be met is indicated by the excitement captured every week in NFL Films. And by the performance of their Eclair GV 16 and ACL cameras.

American Textile Manufacturers Institute

"The message is clear and strong."

Len Arzt
National Society of Professional Engineers

"Excellent film—necessary to the growth and progress of the industry."

Bill Malatesta
National Consumer Finance Association

The New PR film

shows what public relations is all about

You can use it to create a better understanding of public relations in the minds of management and the general public. And you can borrow it free!

The film is called "Opinion of the Publics." It was a smash hit at the PRSA-CPRS Joint Conference, where it had its premiere.

Fast-moving and exciting in good film style, it uses 11 mini-case histories to show public relations as it is. Real people, real problems, real solutions.

The result: A composite impression of public relations and of dedicated people doing an important job. You'll be proud of it.

Show it to management people at all levels. At sales meetings, community groups and college students. Every public relations or advertising group should see it, of course.

You can borrow it free. Or you can buy one or more prints to keep in your organization or donate to colleges. Take your choice, but don't miss the opportunity to use this unique and important film.

Produced for the **Foundation for Public Relations Research and Education** in cooperation with the Public Relations Society of America and the Canadian Public Relations Society. Produced by Avon Productions.

The only things we build better than cameras are reputations.

A filmmaker's reputation is earned slowly... often, painfully. The same goes for his equipment. Because a few bad words can undo years of good ones.

Because of this, we are especially proud of the reputation each of our cameras enjoys for innovative design, unvarying reliability.

ACL combines inconspicuous size with conspicuous advantages. Camera weighs 8½ lbs., yet is less than a foot long with 200' 16mm magazine. Changes magazines in 5 seconds. Shoots up to 400' silently, sync-accurately with built-in crystal motor. Compact battery shoots 2400'; recharges in 30 minutes, fits in pocket; universal lens mount; bright, reflex finder rotates 360°.

CM3's Academy Award winning design includes five-second magazine change. Shoots every aspect ratio in 35mm, including Techniscope and adapts to 16mm in seconds, at no cost. 35mm loads from 100 to 400 feet. 16mm loads from 100 to 400. Divergent, three-lens turret. Variable shutter. Brilliant reflex viewing. Battery-operated 12V constant-speed motor with built-in sync generator. Viewfinder rotates 360°.

Silent running 16mm NPR lets you shoot sync sound without a

blimp. Magazine changes take five seconds. Up to 400 foot loads, daylight spools or core loads. Accurate reflex viewing. Rotating two-lens turret, registration-pin, movement. Universal, crystal-controlled/variable-speed motor with automatic shutter-opening device; speed and sync adaptable to European TV standards. Balanced weight for easy shoulder-resting. Non-shifting image viewfinder rotates 360°, usable for left or right eye.

GV-16: a high speed camera that is small, lightweight, portable; and you can change its magazine in five seconds. Body and motor weigh 6 lbs. 100 to 400 foot 16mm loads. 0 to 200 frames per second. Any lens you want to mount. Battery-operated. Bore sighting. Variable shutter. Daylight loading. Built-in pulsing, marking. Registration-pin and double claw.

Expert service coast to coast at franchised dealers and Eclair Service Centers. Write for free literature to Eclair Corporation at 73 S. Central Avenue, Valley Stream, New York 11580 or 7262 Melrose Avenue, Los Angeles, California 90046

OPTISONICS

THE WAY TO GO TO KEEP THEM FROM GOING AWAY

Go with Optisonics. Whether you need sound for slides, filmstrip or motion picture projection. We've got the lineup to meet your AV needs. Priced right, too. So you can buy more of ours for less than comparable equipment. To help your people talk to more people. In more places. At the same time.

Sound-O-Matic™ Programmer-Recorders and Playback Units...add sound to your slides the easy Optisonics way. Here's a new way to create excitement and interest in an otherwise dull slide presentation. Add voice, music or sound effects with Sound-O-Matic. To improve your sales story. Emphasize a point. Reinforce your message. Record your own audio from any source. Then use Sound-O-Matic with almost any automatic slide projector. It automatically advances each slide—in perfect sync with the audio—using signals programmed onto a 60-minute cassette. With Sound-O-Matic, you get excellent sound, plus all the advanced features you'd expect from a top quality cassette recorder.

Mastermatic® 35mm Filmstrip Projectors...change your language to fit your audience, without disturbing picture. Looking to improve AV communications effectiveness? Talk to your audience in their language. With buzzwords for a special-interest group. Or native tongue for foreigners. Mastermatic can do it for you, while it automatically flicks through up to 175 frames of visual

material. The key: Our snap-in Unipak™ cartridge contains separate video and audio loops. You can edit the audio track without touching the filmstrip. Outstanding synchronization when the audio is replaced. Mastermatic offers rear or front screen projection capability. And its large 35mm format and bright 500-watt lamp provide a sharp, crystal clear image. Whether you're making your presentation in a large auditorium or in a brightly lighted office.

Optimatic™ Super 8 Sound Motion Projectors...small enough to take everywhere. Our 11-pound marvel is an ideal tool for more intimate communications to audiences of 1 to 3. It's small enough (8"x9"x13") and light enough to go anywhere. Which makes it great for sales presentations at your prospect's desk, or for point-of-purchase training and educational applications of all kinds. Optimatic's replaceable cartridge contains continuous Super 8 film, snaps in or out in seconds to change programs. Operation is a snap, too. We'll make you an AV expert with just a few minutes instruction.

the new business pitch,

Flip-up screen.

For showing across the desk.
To show across the room, flip
down and project on any wall
screen. (With a Kodak Ektalite
projection screen, you can
leave the lights on.)

Prices.

The playback model costs less
than \$460, or \$490 with zoom lens.
The playback-and-record model
is less than \$580, also with
zoom lens.

Magic mirror.

To raise or lower the image,
raise or lower the mirror. Not the projector.
It sits solid, keeps a low profile.

Instant playback.

Reverse the film on any frame, play back
any sequence you like. Flip the lever and
freeze frame anywhere. There's also
automatic threading, automatic
rewind. All with this single
control lever.

Crisp, clear sound.

Magnetic sound from
a 5-watt amplifier, with
jack for earphones or
external speakers.

Cassette loading.

Accepts silent or standard magnetic
sound super 8 film in one of four Kodak
Supermatic cassettes. You can load them
yourself, if you wish. Up to 29 minutes of
playing time. Set up and show within
30 seconds.

Take it anywhere

you can plug into 110 volt, 60 Hz.
(Weighs just 30 pounds.)

Use it to pitch, train, preview, introduce, entertain,
storyboard, or sell. With color, action, and sound.

If you'd like more details about Kodak
Supermatic sound projectors, call the
dealer who carries Kodak professional
audiovisual products. He's listed in the
Yellow Pages under
"Audiovisual Equipment
and Supplies." Or send
us the coupon.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services -RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists.

"HOLD IT"

freeze action!

**NOW! Available in all
Super 8mm sound film projectors**

Whether you're selling a product or service or perhaps training an individual or an entire team, Fairchild projectors equipped with the freeze action option offer the most dependable stop motion available in the super 8mm field. Freeze action instantly stops your film on any frame you choose without fear of film damage. Hold the frozen frame for as long as needed then resume normal film speed and sound. Unbelievably accurate.

Successfully tested by Fairchild engineers and successfully used by both industry and government, Fairchild projectors with freeze action bring another dimension to audiovisual selling and training.

With Fairchild expertise and experience at both the designing and manufacturing levels, you can be sure of an efficient and effective presentation of your program.

"Opinion of the Publics" New PR Film About PR

Almost every other management endeavor has had a good PR film to show for it except the one that has needed it the most, public relations, itself. The only reason for this seems to be that no one could agree on what a good PR film about PR should say.

Finally this year, a group called the Foundation for Public Research and Education, established by members of the Public Relations Society of America, got the much-needed film project moving, arranged funding, and turned it all over to a Film Committee headed by Scott Jones, president of Gardner, Jones, of Chicago; to Milton Fairman, a former Foundation president, and now serving as film production consultant; and ultimately for action to Ralph Weisinger, of Avon Productions, New York, to produce the film.

Weisinger, who has made several outstanding PR motion pictures for the New York News and for the Long Island newspaper, Newsday, among others, was impressed by the complexity of attempting an overall coverage of such a far-ranging subject, and decided that it could be best handled by on-the-spot interviews with a diversity of PR people telling and showing what they had accomplished in various projects for corporate and public service.

Using newspaper stories in which public relations activity had played a significant part, Weisinger took his camera and mike out into actual locations all over the country for spontaneous interviews with such PR specialists as Sylvan Barnett and Paul Gibson, of American Airlines, who have done some notable work in urban schools, teaching young teen-age girls how to be as attractive as AA stewardesses are taught. Bank of America VP Jim Langton shows how the Bank refused to be frightened out of town after the burning of its Santa Barbara, Calif. branch by student activists, and describes the positive general public response this produced.

Standard Oil of California's Assistant General Manager for Public Relations, Guy Carruthers, explains the prompt action his company took after

an oil spill near San Francisco, and the public's favorable reaction to this quick, successful clean-up.

In a lighter vein, McDonald's PR Counselor, Alvin Golan talks about his All-American Band promotion, and Pepsico's Alan Pottash describes how Pepsi established a friendly international identity by engaging the famous Brazilian soccer star, Pele.

All in all, 14 public relations practitioners were interviewed, along with over a score more people whose lives have been touched by PR activities. As the actual problems and solutions are being described, the camera often cuts away to newsreel footage, headlines and other illustrative material. Weisinger is a film maker in the modern genre. Everything is natural, everyone wears street make-up, nothing is overlit, and it looks great.

Mayor Jean Drapeau, of Montreal, with producer Ralph Weisinger, of Avon Productions. Mayor Drapeau described how valuable PR was for his city.

"The idea," says Weisinger, who served as writer-director, as well as Director of Photography on the film, "was to give a composite impression of public relations and of dedicated people doing an important and necessary job. We felt that the more realistic the film could be, the more the honesty and dedication to public service of good public relations would come across."

The primary viewing audience for the film is organizational management,

especially in the business corporation. Understanding of the public relations role is of vital importance in that sector, according to the Foundation. Other key audiences include public relations practitioners, themselves, and college students.

Modern Talking Picture Service is distributing *Opinion of the Publics* and prints are being made available to audiences from all offices of the company in the U.S. and Canada. In addition to the business groups mentioned above, the film will be circulated widely to community groups, schools and television stations.

Thus far, in preview showings, and before business management groups, the film has created a great deal of favorable response. Philip H. Dougherty gave it a fine send-off in the New York Times, and Robert Barbour, in the PR Reporter, reported that in a series of queries his publication undertook, the film rated either "darn good," or "excellent" by everyone—an extraordinary tribute!

"900 Fine,"

A Silver Dollar Documentary

Carson City Silver Dollars—shiny, elegantly sculptured, and seemingly new—the metal artworks are, in reality, historic relics, mementos of bygone Americana.

These particular silver dollars are unlike any others. They were minted between 1878 and 1891 at Carson City Mint in Nevada. Since then they have been stored in United States Treasury Vaults, almost forgotten, since Carson City Mint closed nearly one hundred years ago.

They and the historic era from which they come are the subject of the film documentary, *900 Fine*, to be shown throughout the United States on television this winter. Produced by Associated Producers, Inc., of Washington, D.C., *900 Fine* reveals the style of Nevada boom towns and mining camps—a life style as flamboyant, bawdy, and blustering as is imaginable. The Old West is here in all its dubious splendor—complete with bustling, beruffled women; hard-drinking, fast-living prospectors; slick professional gamblers, lawmen, horse-standers, and outlaws—all creating a swirl of life at the center of which is silver. Silver; feverishly searched for

BY OTT COELLN

Films of Britain and Germany Take 10 of 23 Awards at 13th International Industrial Film Festival

In the 13th year of its successful tour of various European cities under the auspices of The Council of European Industrial Federations, the annual International Industrial Film Festival came to Holland for the first time on November 20-24.

Held this year in the modern facilities of Amsterdam's RAI Congressentrum, the Festival was made possible by the combined efforts of Dutch employers and industrial federations joined by that country's industrial film producers and principal distributors.

119 films were submitted by 13 participating countries for competition in the eight primary categories of the Festival. With the exception of nine entries from Japan and a similar number from the United States, all the rest represented eleven Western European lands from Scandinavia to Italy and Spain. France, West Germany, Great Britain and the Netherlands each had the maximum of 15 films entered in this year's competition.

The big winner at Amsterdam was Great Britain with two first prizes, one of the two Grand Prix, two second prizes and a third prize. Britain's trophy total of six awards was followed by West Germany's acquisition of four trophies: a first prize; two third prizes and the other Grand Prix of the Festival.

Films of Denmark, France and the Netherlands were successful winners of three awards apiece, each gaining a first prize while France also took two second prizes and the Netherlands' films winning a second and a third prize. Danish entries also received one first prize, a third and captured the annual Inforfilm award for the film with the best international distribution potential.

Italy's entries won one first prize; Finland was tied as a third prize winner (with the Netherlands, in Category C); both Sweden and Switzerland captured the remaining single awards: each winning a second prize to round out the total of 23 prizes awarded at this year's Festival.

As at Florence in 1970, the United States was again shut out of the winner's circle. But so were the five entries from Austria; the seven films submitted by Japan; and the three entries from Spain.

The quality of judging at Amsterdam followed the high standards set at previous events with both competence and experience with the industrial film well represented among the 28 members of the International Jury in addition to the Jury president and vice-president from Holland. U.S. members of the judging group this year were Dan Kater, vice-president and general manager of Modern Talking Picture Service, Inc. and Anthony A. Sellner, sales development manager, Dorsey Laboratories.

But the film's the "thing" and this year's entries at Amsterdam showed a strong trend toward international trade concerns of the competing European lands, especially among the prize-winners. Concerns about water resources, the future of rail transportation v.s. highway over-building were reflected in the prize lists. There was a notable turn toward the use of the medium to *sell something* rather than simply image-building. The categories E-F-G, restricted (respectively) to science and health (E); employee training and motivation (F) and safety education and accident prevention (G) had excellent entries which followed, if not exceeding, previous winners in those lower-budget but highly-important areas.

Great Britain's first prize and Grand Prix winner in Category A, *A Pretty Good Arrangement*, was unusual in several respects. In previous years this category prize, and often the Grand Prix, has been captured by films of great "image" quality and cinematographic excellence. But up came London's Building Societies Association (similar to U.S. Savings & Loan companies) with a visual interpretation to the general public on how a building society works. A comparative newcomer to the prize lists, Abacus Productions Ltd. of London, shared top

honors on this good film.

The other Grand Prix went to the first prize winner in Category G, *Au Auto*, sponsored and produced by Profil-Film Frank Tietz of Cologne, Germany. This 20-minute color film showed in a most realistic and somewhat ironic way, the relation of the driver to his automobile and its effect on highway accidents.

Techniques of film production demonstrated in a film of high quality won a first prize for the Italian entry *Scenotecnica*, produced and sponsored by the Istituto Luce of Rome. This picture took highest honors among the 19 entries in Category B.

Category C, with the highest Festival total of entries (29 films), was won by a Danish film, *Sit-Down—Sit-Down*, sponsored by a Danish furniture manufacturer and produced by I. Dam Film, Copenhagen. This first prize winner, intended to stimulate interest abroad in Danish furniture, also received the Inforfilm jury award as offering "the best possibilities for international distribution."

A promotional film, *RC 200*, sponsored and produced by Poclair S.A. Le Plessis Belleville was the top prize winner in Category D; in Category E devoted to films on science and health matters, Great Britain again scored top honors with a first prize to *Bacteria*, sponsored as part of the continuing science film program of Unilever Ltd. and produced with superb technique by Rank Short Films Group of London.

The important Category F, devoted to films for employee training and motivation, had a familiar winner as Caillon Audiovisual Media's production of *Make the Difference*, for KLM Royal Dutch Airlines, received the first prize.

The Category G first prize winner (and Grand Prix recipient) *Au Auto* has been previously mentioned as the Festival's best among accident prevention films.

We've noted before and underscored again the Festival proclivity toward submitting entries on 35mm, which certainly tends to get bigger and better projection, especially in auditorium showings, at events of this kind. Make what you will of it, but in Amsterdam 17 of the 23 prizes went to films shown in 35mm v.s. six 16mm print

All except one first prize and both Grand Prix winners were submitted on 16mm stock and in color, of course. Jury members are only human and it takes a lot of content value to overcome the obvious image difference on that big screen!

This column expresses a personal word of appreciation to U.S. jury member Tony Zellner, Dorsey Laboratories, Lincoln, Nebraska who represented both CINE and the Industrial Audio-Visual Association at Amsterdam this year and dispatched special airmail reports from which this Business Screen report has been prepared.

Free Enterprise Needs to Tell the Complete Story With Films

Significantly, the President of the Council of Netherlands Industrial Federations, Mr. S. C. Bakkenist, devoted the greater part of his address welcoming delegates to the International Industrial Film Festival in Amsterdam to a key objective of that event and of the factual film: "to explain the position of industry in a free society and its social problems."

U.S. industry and its trade groups are no strangers to what this European leader calls "the rough passage these days . . . with the wind of criticism strong and the waves of politics high."

His message to the hundreds of Eu-

ropean industry representatives: "industry often fails to inform and clarify public opinion on its aims and activities."

Noting the excellent TV commercials in this vein of information sponsored by such companies as Humble Oil & Refining, for one, can we reasonably expect to get the complete story through in those costly, brief "shotgun moments? Is American enterprise failing to consider and widely, wisely the need to deliver real understanding to the countless thousands of influence groups meeting morning, noon and nightly in clubs, lodges, union halls, and classrooms all across the U.S.?

Commercial television is limiting and costly; public-service telecasts, including film prints made available to hundreds of public and educational television stations is "open" and far more convincing to the people who count: thought-leaders throughout the land.

Production excellence is at hand from among dozens of highly-creative film makers; distribution of informational motion pictures of real value is fully accountable and vast in dimension. *What are we waiting for?* Any public relations' executive can get the facts from the national and international film distribution companies.

Xerox' Restraint Sets Example for Commercials in "America"

Alistair Cooke's current television series, *America*, is being sponsored by the Xerox Corporation. Beyond the obvious interest of viewers in this 13-part weekly NBC program and its factual, scenic and tasteful presentation of this country's historical antecedents, a special word of commendation is due the sponsor for limiting commercials to a brief two spots at the beginning of each show and two after the close.

We trust that its rating popularity will remind us, too, that the subject matter is boundless and other approaches await other sponsors. And, at the conclusion of these showings, we're hopeful that 16mm prints will be made available to schools, etc.

Areas Where Films Are Needed Show Up in the Public Prints

The public prints are an important reference source for the sponsor and producer looking for areas where more films are needed. A recent New York Times' News Service release (Nov. 1972) revealed that the national shortage of physicians is expected to worsen. Bill Buckley Jr. devoted a recent column commentary on the "Rapidly

PARADOX: The "indispensable man" is one person along without whom you can easily get.

Recently I did something new for me . . . I got sick. I've always been blessed with good health, and except for an occasional headache or cold, I haven't actually been sick in bed since my teenage appendectomy. And suddenly in the middle of my busiest week in the year I found myself laid low by the flu for more than ten days. Dizzy, wan, pale, abdominal distress, aching bones, so weak I could hardly raise my head to cough and sneeze. Now why this recitation of dreary symptomology . . . and from a patient who spends one third of his time writing medical films?

Well frankly, because it was all so new to me. Like most healthy people, I always looked upon illness as some mysterious moral weakness which affects *other* people, who must have done something to deserve the sickness. My own visits to the doctor were for routine physical exams, at the end of which he told me to go out and enjoy life, but first lose twenty-five pounds. Invariably I followed half of his advice. And you can easily tell from my picture above *which* half of his advice I followed.

For no reason very clear to me, this has been the busiest year of my life . . . and it all came due at the same time. When I accepted the assignments in the first place, they were pretty well spaced out in a perfectly reasonable manner. But then, some projects were delayed, others were moved ahead . . . and some were emergency projects, tossed in at the very last minute. Anyway, all of a sudden, four complete

films, three scripts, and four sales conventions all came due within the same ten week period. In actual fact, I attended two mixes and four interlocks within the same five working days. It was the week following that week in which Father Flu gave me my comeuppance.

Being sick in bed is a very humbling experience. The first thing you discover is that the world goes on without you . . . "Indispensable man" though you are to all those producers and clients. How do they manage without you? Well, in many ways.

A writer friend sits in on an input session in your place and records it all on a tape cassette. A producer presents your script to another client, much to your surprise, since you never thought he could read *silently*, let alone out loud! (Furthermore, he does a very good job, and sells the script for you, finding many values in it you had not realized were there until he mentioned them to the client.) A quiet, workmanlike, scholarly film editor who had always been very laconic and retiring in your presence, presents an interlock to a client, explaining why things were done the way they were instead of the way originally promised in the script, and also gives "The - World - Famous - Stanford - Sobel - Pre - Interlock - Speech - Of - Explanation - Of - What - You - Are - About - To - See - And - What - You - Are - Not - About - To - See - Plus - Miscellaneous - Apologia", without which no interlock showing is ever really complete. (Obviously, he had heard it so many times before he had memorized it, and all that time I thought he was just shy and retiring.)

And then to climax the week a complicated, programmed, multi-media show came off perfectly, even though everything had gone wrong during rehearsals when I was present. My associates called to tell me how well everything had gone as soon as the show was over. Elated, they pointed out to me that when I was home sick in bed, the programmer picked up every signal, the Carousels dissolved on cue, no slides got jammed, the colored lights danced to the proper frequency ranges, the house-lights went down to half and stopped without flickering, nobody fell through any screens while snapping on the valences, and all four quadraphonic speakers balanced on the first tape.

And, they gleefully repeated over the sound of my teeth chattering from fever and chills, all this happened so perfectly while I was home in bed goofing off!

I also learned something about doctors, today. My doctor is a good friend. He's young, superbly qualified, deeply concerned with the broader issues of health-care, and good-looking enough that we used him as the lead in a medical film where he played his own professional role . . . a skilled and knowledgeable internist. He's also a superb poker player and a regular member of our group. However, he's always being called to the phone in the middle of the game for consultations, and it's not unusual for him to have to leave the game to go over to the hospital, and that happens even when he's not on call and has someone else covering for him.

Good friend though he is, I learned that nobody talks to doctors, although sometimes they talk to *you*. Every time I tried to reach him I spoke either to his answering service, his nurse, or his receptionist. When he finally called me back directly I asked him who all those people are that he has to talk to during our poker game and his answer was crushing . . . "Oh, but Stan," he said, "those people are *really sick*!"

You might think that this traumatic experience changed my life in some way. I thought at the time that I would myself. But here we are, just a week later, and what has happened? I'm back to the same kind of schedule. This morning I began with breakfast with an out-of-town client at his Manhattan hotel, which meant that I had to leave my house at 6:30 a.m. Then we had a mix at 9:00 a.m., at 11:00 a.m., I went to the office and answered phone calls and mail, lunched with the TV Academy people worked on a script from 2-4 p.m. worked with an art director and client on a storyboard from 4-6 p.m., finished at the office at 7:00 p.m., came home and had a late dinner, and here I am writing this column at 11 p.m.

So what did I learn from the experience? I learned two things: Number One: Nobody is indispensable except to himself, and Number Two: need a vacation! I also made an important resolution . . . I'm going to go on a diet . . . next week. □

Stanford Sobel is a hard-working writer, he says, who free-lances in New York and also writes this column of "Paradox" for each issue of Business Screen.

Movies to write by.

You can leave the lights on and let your audience take notes, when you show films with the Bauer P6 Automatic 300. Because this superb portable 16mm sound projector features a metal-arc lamp, which is up to four times as bright as conventional projector lamps.

Or you can use the Automatic 300 in the dark, to fill even large, distant screens with light of daylight quality. The kind of light you need for a brilliant image.

No wonder this projector is recommended for auditoriums, theatres and large conference rooms.

It's available in optical and optical/magnetic playback models.

Other features: auto thread-

ing; provision to connect optional change-over unit (also recommended for remote control of projector); and Fail Safe switch that stops projector if film breaks.

Other Bauer professional 16mm projectors:

Bauer P6 Studio 16 mm double band projector. A film maker's combined film-and-sound studio.

Bauer P6 Synchron—ideal projector for film screening. Manual threading. Optical/magnetic playback and magnetic recording.

Bauer P6 Automatic M152—Self-threading A-V projector. Optical/magnetic playback and magnetic recording.

For more information, please write us.

BY HUBERT WILKE

GUIDELINES FOR GOOD SOUND

by Irving W. Wood

Today nearly everyone realizes that audiovisual media are playing a very significant role in the communications process in business and education. The ever-increasing need to assimilate information, to evaluate information and to react with valid decision-making, depends upon the quality and effectiveness of the communications process—especially that part that relates to seeing, hearing, and being heard.

WHY ARE SPEECH REINFORCEMENT SYSTEMS NECESSARY IN THE FIRST PLACE?

The large room, hall or auditorium requires electronic voice support to cover the often considerable distances involved, and to provide an adequate sound level at the ears of the listener to ensure good hearing.

Properly designed reinforcement systems can provide good speech intelligibility in most acoustically difficult spaces, even those with long reverberation times, such as concert halls, and churches, where the architectural acoustics are optimized to support the musical requirements rather than speech.

It would seem that in most small-to medium-sized rooms, the unaided voice should be sufficient for intelligible communications without electronic amplification. This is generally true, especially where the architect has established and maintained suitable acoustic guidelines.

However, the converse is often true, and the reasons are:

1. Even with the best-laid plans, acoustical perfection is still an elusive quality because most spaces reflect a number of compromises between functional requirements, esthetics, space allocations, and budget.
2. Some people have difficulty projecting their voices, or they tire easily and cannot maintain adequate loudness.
3. Although they are often unaware of the fact, many people have varying degrees of hearing impairment, and

it does not improve with age.

4. Ambient noise, non-uniform acoustic absorption, and inadequate reflective surfaces within a room can degrade speech intelligibility.

It is not uncommon to experience hearing difficulty even in very small conference rooms where the energy distribution of heating, ventilating and air-conditioning noise masks the upper speech frequencies. A voice reinforcement system is not a panacea for room acoustic design oversights. But it can prove helpful when direct remedial action in room design is not esthetically or economically feasible, and it can greatly benefit those whose speaking or hearing ability is a little less than "average".

We often hear that a room does not require a reinforcement system because of the "excellent architectural acoustic design." It is our experience that most of these spaces DO need audio support systems. If the necessary architectural details are not designed, coordinated and installed as part of the original room construction they are added later at considerable extra expense and with minimal esthetic consideration.

Electronic reinforcement should be seriously considered for any space where effective, effortless voice communication is mandatory. An increasingly important benefit of such design is its easy adaptability to telephone conference use, interconnecting a remote telephone, or two or more conference rooms in the same building or between cities.

A major objective in the design of reinforcement systems should be to make them "aurally invisible." That the reinforced speech should be as natural, unobtrusive and effective as the original speech, so that the listener will not be particularly aware of its contribution (unless it is inadvertently turned off). Ideally every listener in a room should hear the person speaking with the same intelligibility and loudness that would occur if the two were conversing face to face. This degree of speech clarity and loudness should be maintained regardless of the actual separation between

All too often in the past, the audio aspects of an a-v installation were treated as a stepchild to the more apparent and glamorous visual requirements. Fortunately, we sense a change. Clients either are becoming more aware of what the current state of the audio art can accomplish or are just plain tired of straining to hear words of wisdom emanating from within large group conferences or 25 to 30 man board meetings.

There are many projects wherein we have found a greater challenge in solving the audio than the visual requirements. And, in most such situations the intricacies of the audio layout are not readily apparent to the listener. It may be said, not entirely in jest, that if there is anything more difficult than designing an audio amplification system that can't and shouldn't be heard—it is writing about it.

Our colleague, Irv Wood, has done both and in the accompanying columns shares with you some thoughts and guidelines based on his twenty-three years of experience as an engineering specialist in sound systems. The actual application of his work is evident in major assignments for such clients as AT&T, Continental Oil, DuPont, G.E., Exxon and the New York State Theatre at Lincoln Center.

H. W.

Hubert Wilke is president of Hubert Wilke, Inc., an international organization specializing in communications facilities design and programming consultation.

In low-ceiling rooms a series of low-level loudspeakers should be used, with sufficient overlap to give uniform sound for the listeners, as illustrated above.

Special speech reinforcement systems have been developed for use in boardrooms. The problem is to get sufficient amplification without developing feedback. Illustrated at left is a table divided into zones for differential amplification.

between the person speaking and the listener.

Too often, the typical sound system in use today amplifies the entire sound spectrum rather than just those selective frequencies required to enhance naturalness and clarity. This results in the usual "public address system" quality of sound; a booming, frequently muffled, but indistinct sound usually riding on the very edge of acoustic feedback.

Unfortunately this is the sound quality that most frequently comes to mind when one considers the use of electronic amplification, and it is understandably the reason why many facilities, which could have benefitted from the use of a properly engineered system, have done without it.

One of the most effective new techniques available to the system designer is the 24-section $\frac{1}{3}$ octave-band equalizer, which permits critical tuning of the entire electro-acoustic system for optimum sound quality and freedom from acoustic feedback.

For optimum directional effectiveness, the sound should appear to originate from the person talking. This is best achieved by means of a single cluster of overhead horn loudspeakers oriented with a generous overlap of individual horn coverage patterns to ensure uniform sound pressure level throughout the area of seated listeners. The cluster must be carefully located to reduce acoustic coupling to open microphones, and the inherent loss of gain before feedback. A loudspeaker horn cluster is suitable for use only in the large room, hall or auditorium, where there is adequate floor-to-ceil-

ing height to permit complete coverage of the audience.

With very long or wide, low-ceiling rooms, the designer has to turn to a pattern of ceiling loud speakers usually referred to as a low-level or distributed speaker system. More speakers are required for uniform coverage than one may realize. The lower the ceiling height, the greater the number of speakers required to provide uniform sound coverage. The reason is that ceiling speakers, like downlights, have a specific angle of coverage, and as with downlights, if the mounting centers are too far apart, the resulting pattern will be irregular and the variation in sound level will be excessive.

For critical applications where only a minimum sound level variation can be tolerated, a speaker sound dispersion angle of 60 to 80 degrees (depending on the type of speaker selected) is projected for a 50 per cent overlap coverage pattern at ear level (4 ft. for seated listeners). An alternate row offset pattern is preferable if the reflected ceiling plan permits. This tends to fill the diagonal holes in the projected sound coverage pattern.

REQUIREMENTS FOR EFFECTIVE PRODUCTION OF MOVIE SOUND TRACK AND AUDIOTAPE IS DIFFERENT FROM LIVE SPEECH REINFORCEMENT

When a facility is designed for preset-automatic or remote-control operation, it is often advisable to provide two partially or completely separate sound systems; one especially equalized for speech reinforcement, and often incorporating separate ceiling speakers; the other for wide band program re-

production often including the capability to playback two-channel stereo or quadraphonic material.

The main difference between live speech reinforcement and prerecorded music-program reproduction is that the latter, which has no open microphones to contend with, is free from acoustic feedback and, therefore, is capable of any desired playback sound level.

It is particularly desirable to maintain a directional effect for motion picture sound. The loudspeaker should be located on-center, as close to the projection screen as possible. Ideally it is located directly behind a stretched perforated screen. Because of space or other considerations, it is sometimes located directly above or below the screen. In any event, it is important that everyone be able to "see" the speaker location in order to hear the higher frequencies effectively. Since good hearing and good viewing are equally important for effective communication, the communications facilities consultant should wherever possible participate in the preliminary space planning and allocation to insure the proper selection and utilization of available space, to optimize the client's communications objectives. □

Irv Wood is a senior associate of Hubert Wilke, Inc., and a leading authority on sound systems.

Awards • Awards • Awards • Awards

The award winners at this year's INTERNATIONAL FILM & TV FESTIVAL OF NEW YORK were selected from the largest number of competitors in the Festival's history. Over 2,000 films and commercials were submitted from companies and individual producers in the United States and from nearly every country in Western Europe, as well as from Japan, Canada, Australia and many Latin American countries.

The Awards Presentation Banquet on October 27 was a lively evening of dining, dancing and entertainment attended by nearly 800 guests—the Festival Banquet's largest attendance to date.

As in previous years, the evening started with the distribution of bronze and silver and gold awards, which was followed by, first, the Triple Threat Award, which was given to William

Van Praag, and then the six Grand Awards, which were presented by Herbert Rosen, the organizer and Chairman of the Festival.

The greatest number of awards was captured by Benton & Bowles which received, among others, a Grand Award and three Gold Awards for their entries in various categories.

This year's Festival was additionally remarkable for the participation of representatives of no less than 23 countries from all parts of the world.

Here, left, Charles Ticho, of Fred Niles Communications Centers, receives a Gold Award from actor Jim Dukas for the multi-media production, *Today's Man Makes Tomorrow*, made for the Insurance Company of North America.

On the right, John Holmstrom, Ford Motor Company, receives a Gold Award from actress Gretchen Wyler.

A new award was made this year by THE COLUMBUS FILM FESTIVAL. Called The President's Silver Cup, the award is given by unanimous determination of all category chairmen. Here (l to r) Daniel Prugh, president of the Film Council of Greater Columbus; Paul Yoachar, producer/director, WBNS-TV, Columbus; and Ohio Astronaut John Gler accepting the award to Wolper Productions for the film *Appointment with Destiny*.

Coming up next...

The U. S. INDUSTRIAL FILM FESTIVAL has announced that entries are now being invited for the sixth annual awards competition and should reach festival headquarters prior to March 1, 1973.

The festival is said to be the largest international event devoted exclusively to selection and recognition of 16mm industrial films, filmstrips and 35mm slide programs. The festival this year is accepting both 16mm and 35mm filmstrips.

Invitations printed in fourteen languages are being sent out worldwide by the festival. In 1972 entries were received from 19 nations with 7 nations sharing in first place "Gold Camera" awards.

Entry forms and a brochure describing the festival may be obtained by writing the U. S. Industrial Film Festival, 4415 West Harrison Street, Hillside, Illinois 60162 U.S.A. Overseas entrants may cable FILMFEST:Hillside.

Presentation of Golden Eagle and Cine Eagle certificates by the COUNCIL ON INTERNATIONAL NONTHEATRICAL EVENTS took place in Washington, D.C. on November 10. Here (left) Robert Kelley, of Modern Talking Picture Service, receives Gold Medal from Giancarlo Cararra-Cagni, Counselor of the Embassy of Italy, for the film his company distributes, *What Man Can Imagine*. The film won the

XV Golden Mercury Prize at Venice. It was produced by Keith Merrill Associates for Kaiser Steel Corporation.

On the right, Lowell Wentworth, director/editor of the film *Ohio... It's the Beginning*, accepts a Golden Eagle from Dr. William G. Carr, president of CINE. The film was produced by The Film Group, Inc. and was sponsored and distributed by the Ohio Bell Telephone Company.

Eleven of the thirteen award winners used Arriflex cameras!

Again, for the fourteenth consecutive year—more winners* filmed with Arriflex cameras than all other makes combined! We are proud that Arri motion picture equipment continues to enjoy such a high degree of preference by professional cinematographers.

*Eleven of the thirteen winners in the 1972 awards used Arriflex cameras and during the past fourteen years, Arriflex scored in 171 of the total 219 awards.

a-v man

Elliot A. Macklow, Chief, Motion Picture Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, is Business Screen's **AV-Man** in this continuing series of profiles of leaders in the industrial audio-visual world.

Some of the busiest Audio-Visual Men in the country today are those working in the big Federal agencies in Washington. Our national government has used film and other audio-visual devices with great effectiveness almost from the beginnings of projected media.

One A-V Man who has done an exceptionally fine job of serving the government, who has won the respect of his peers, and who has provided audiences all over the country with entertaining and informative films for many years is Elliot A. Macklow, Chief, Motion Picture Service, of the Department of Commerce's National Oceanic and Atmospheric Administration.

NOAA's Motion Picture Service works quite a bit differently from most governmental film production and dis-

tribution facilities. More than 75 percent of the motion pictures it produces and distributes *are not* financed by the Federal Government but by outside organizations (industries, manufacturers, processors, trade associations, foundations and states). For example, one of NOAA's most recent motion pictures was sponsored by one trade association, twenty states, and one hundred members of industry. This type of sponsorship is one of the major factors making the NOAA motion picture program unique.

NOAA's government-industry cooperative procedures, of necessity, are complex. Many Government agencies have tried outside-financed motion picture production; relatively few have been successful. In brief, the procedures under which NOAA operates are based on a few important guiding principles:

- Mutual government-sponsor trust is combined in an extremely close and delicate relationship.
- Mutually advantageous selected subject matter content must be of importance to the general public.
- Stringent, intelligent, competent Government motion picture technical supervision is utilized.
- The motion picture to be produced must be a good, long term business investment for the sponsor(s).
- Follow-up motion picture utilization studies are always made so that there is good post-production reporting of usage, showing calculable investment returns to the sponsor.

Another major contributing factor making NOAA's motion picture service unique is that it is a complete motion picture service. It:

- Conceives the concepts for a motion picture.
- Arranges financing.
- Writes and supervises all motion picture contracts and agreements, always using commercial contractual motion picture facilities.
- Totally supervises every phase of production.
- Distributes, free of charge, about 10,000 prints of 30 titles which it has produced through a nationwide NOAA distribution system of 200 film libraries.
- Arranges for specialized methods of distribution, eg, television, theatrical, convention and foreign distribution.
- And most important, makes extensive film distribution and utilization studies reporting back to the sponsor(s) periodically.
- Arranges low Government-cost print purchase and takes care of all motion picture administrative matters protecting the sponsor's cash investment as well as the Government's investment in time. As a result of this,

NOAA has an almost 100 percent record of repeat business with every sponsor.

Statistics show that the average business film brings about a seven-year investment return. NOAA films, produced more than 25 years ago, are no more active than ever. NOAA seems to know how to plan them that way.

Elliot Macklow, who is in charge of NOAA's film activities, has had a thorough background in all phases of audio-visual applications. After majoring in Natural Sciences and Education at the College of William and Mary, he went on to an M.A. in Audio-Visual Education at Columbia University. He taught natural sciences in New York, Miami and Darien, Conn. at the high school and junior college level. He was Educational Director of the Army Air Force's School of Meteorology at Chanute Field, Rantoul, Ill., and was Director, Comad School of Optical Technology. ("Yes," he says, "I've even ground my own lenses.")

Macklow feels that it is important before making motion pictures for primary use in educational institutions to do some teaching with films.

"This experience does not have to be gained as a formal classroom teacher," he says, "although that is helpful. It can also be gained more informally as a scout, P.T.A., civic or religious organization leader. With this preparation I launched into 27 years of Government film making. Twenty-six years have been in the same job, constantly broadening its scope. Twenty-four years in the Department of Interior, then in the Department of Commerce where the job, itself, was moved, and moved with it."

Not only his formal education and previous work but all his avocations have contributed to Macklow's effectiveness on the job. All of his hobbies seem to be part of his audio-visual work. In music, he attended the Juilliard School of Music, studying piano; he held a Philharmonic Scholarship for three years on flute; and he played saxophone and clarinet in his own dance band at college. In electronics he built his own hi-fi equipment before the word was invented; he is an amateur radio enthusiast (his call letters are WA4GHC in case some of our ham readers would like to give him a call). He won his first photo contest at the age of twelve. Another hobby lies in the theatrical staging of light operatic productions. Combine all these "extra-curricular" activities and you have almost all the requisites for good film making.

Even at home, Macklow and his family live and enjoy the audio-visual

The "Creative" Film—

How well does it serve the client? How important is it in 1973?

by LEE R. BOBKER

Over the past decade, as the art of film has reached maturity, much lip-service has been given to the entire question of "creativity" vis-a-vis the sponsored film. Many sponsors and producers, happily entrenched in a quicksand of financial success, were still holding fast to a convenient philosophy that the art of filmmaking, as evidenced in such landmark films as *McCabe & Mrs. Miller*, *Garden of the Finzi-Continis*, *Shame* and *Clockwork Orange* has no real or justifiable place in what they imagined to be an entirely different field. "We're not in the entertainment business," they testily argued and went back to their illustrated lectures and didactic celluloid manuals. Indeed, a major film consultant or "counselor" in New York has built a highly successful business on the expressed philosophy that art has no place in the sponsored film.

Prior to the mini-recession of early 1971, this debate was largely academic. Those who felt that "creativity" and filmmaking were inseparable (a small minority of the industry, unfortunately) worked at their craft and carved out personal and particular reputations while the "big business" boys of the field built studios, played at being Hollywood producers and delivered to the leaders of American business the most dreadful films ever made. Since prosperity was the motivational force, no one during the late 60's even stopped to evaluate these films or to investigate audience reaction. However, when the financial ax fell in 1971 and the sponsored film was deemed an expendable luxury, the question of "creativity" became a focal point for many agonized budget reappraisals.

"If . . .", the iconoclast asked, "all the millions, yes, millions of dollars, that had been spent on sponsored films were really doing their job, why was the sponsored film now being universally deemed an expendable luxury?" The casualty list in early 1971 among the major producers of

those straight no-nonsense, non-creative disasters, shocked the whole industry. The small high-quality, highly creative producer fared much better. The reason was relatively simple.

Under the pressure of impending financial catastrophe (depression, that dirty word never used by R. Nixon's Council of Economic Advisors), the leaders of the American business community had begun to look at the films they had been buying . . . and they were horrified. The standard "sponsored" film producer, faced with cutbacks and cancellations of a product he thought would be in demand forever, and having nothing in the way of talent to fall back on, simply folded up.

Then, due to the election year necessity of shoring up the economy by whatever means necessary, we were, as they say in the Bible, "all saved". But nothing ever again would be the same *because* that word "creativity" was once again spoken aloud. As the stock market now breaks through 1000 with a vengeance and the rosy

glow of favorable forecasts emanates from the glass towers of our commercial centers, there is no hysterical rush to get back to producing those awful films again. Quite to the contrary, the day of the straight sponsored film is probably over. Few, if any, top executives of major corporations will today accept the dull lecture, the formula film, the stolid narrated tranquilizer. As with all change, the sins of the past will linger on for a few more years in the person of those remaining producers who won't or can't make an artistic creative film. Firms like the film consultant company mentioned earlier will go on digging up (and it's quite an excavation) clients who are still willing to accept the "nothing" film but by and large, a major revolution has been accomplished.

Today—the intelligent client sets one standard for his film investment—and it is creativity. He has learned that it is the only criterion by which his film investment can be measured. H

Lee R. Bobker is a teacher, author, film maker, and president of Vision Associates in New York.

Few, if any, top executives of major corporations will today accept the dull lecture, the formula film, the stolid narrated tranquilizer."

Now that despite the impressive set of numbers provided by the distribution of the sponsored film, a far more important set of questions need be answered. It is no longer of paramount concern whether the film was seen by 5 or 50 million people. The old definition of per capita cost is no longer a yardstick. In our new-found wisdom we know that the linked question of audience impact and *quality* of audience are far more important. Finally, it has been recognized that audiences do not make any distinction between the adjectives we used to use to apologize for a shoddy dull film. To paraphrase Miss Stein, "a film is a film is a film is a film." For today's audiences this is the reality. A film made for IBM or Eastern Airlines must in its artistic achievement compete with the creative merit of *Five Easy Pieces*, *Hounddog*, or *Chloe in the Afternoon*. If they fail to do so the client, in return for his substantial investment in producing prints, and distribution, will reap a harvest of anger and antipathy. If his film is dull and didactic, the audience will make the connection to the company as a whole. Recently, a major oil company using a film consultant service, produced a motion picture that in its narrative was virtually illiterate and covered, like a shroud, almost 80% of the film. The structure of the film was infantile as it plodded from location to location proclaiming the excellence of the sponsor and all his works. To add insult to injury, a monochromatic ballad was added accompanying the weaker sections of an already weak film imitating the folk ballad of circa 1958 when Burl Ives and Richard Dyer Bennett were the only singers on the YMHA circuit. Ecology and all the dynamic social upheaval of a quarter century were ignored. More important, the film was greeted with jeers and catcalls on several college campuses. The client, never questioning the efficacy of his \$250,000 investment, was happily counting audiences.

Today, and for the foreseeable future, the sponsored film will focus on the words *artistic integrity*, *creativity*, *imagination*. The major buyers of these films know now that they must rely

on the filmmaker who can intellectually understand the message he is trying to communicate, who can emotionally identify with that message and who has the talent to create a sponsored film that is a true work of art.

It is, in the final analysis, "creativity" that justifies the film. This imposes on the filmmaker a very heavy responsibility. Scripts must really be written and researched . . . no vague superficial obfuscations designed to get "approval." No longer treatments, picture plans, film analyses or other semantic excuses for lack of talent. Direction and camera work must reflect the tremendous technical advances being made in the field. One has has only to view the cinematography of Vilmos Zsigmond in *McCabe & Mrs. Miller* and *Deliverance* to catch a glimpse of what can be done with current film stocks and cameras. We no longer need to hide our creative laziness under a blanket of dull narration since our sound equipment now makes essential lip synchronization under any and all conditions. Music is modern so we can close the door forever on the conventional stock library score that sounds like something from the old WPA Group Theater. Editing has taken off—so sponsored films need not look like they were cut by a kindergarten child doing an ordered exercise.

"Creativity" is the central factor behind the tremendous success of recent films produced by IBM, Coca Cola, Eastern Airlines, Planned Parenthood, The Franklin Mint, H.E.W., U.S.I.A., Armstrong Cork & Tile, Kaiser and AT&T. Creativity is the basic trademark by which we can recognize the work of Guggenheim, Owen Murphy, John Peckham, and others and it is no coincidence that they are consistently among the busiest and most successful producers on the current scene.

Film is an art and this is true regardless of the kind of film. If this is true—creativity is what the client is buying. He will, in the decade ahead, buy fewer films but he will demand that they be artistic and creative—and he will begin (hopefully) to pay close attention to the effect the film is having on audiences. □

SLIDE SYNC CASSETTE RECORDER

Combine a Telex Slide Sync Cassette Recorder with a remote controlled slide projector and create your own tape-slide presentations. Record both the audio program and sync pulses (advance or stop) separately or simultaneously and you're ready to present, instruct or train with a synchronized audio/visual program. Effective with one person or one hundred and easy to produce, erase, play and repeat program segments.

That's right, REPEAT. A single Review button adds the unique capability to instantly repeat any portion of the program maintaining perfect tape and slide synchronization. It's great for emphasizing, studying, training, drilling, or testing. Other functions provide complete control for tape and slide projector including remote focus, slide advance reverse, tape start/stop, instant pause, tone and volume controls, tape fast forward reverse and end-of-tape sensing.

With the Telex Slide Sync Cassette Recorder you can record both audio and sync channels, add the sync track to a pre-recorded cassette or use the unit as a standard monaural recorder/player. You can monitor while recording and add narration through a built-in P.A. system to supplement the program without recording. All this combined with heavy-duty industrial design make this unit the most versatile slide sync cassette unit ever! Also available as a player only. Made in the U.S.A. and warranted for a full year.

BUHL

If you want
the sock, the
sophistication and
the sizzle of
multi-image, you
have to pay the
price.

\$465.

Working on tone pulses from your stereo tape recorder, our Quadra Que four-channel programmer runs any combination of four projectors to give you a faultless mix of slides, filmstrips and motion pictures. And if you run fewer than four projectors, you can use Quadra Que's automation to program anything from the house lights to the popcorn machine.

Quadra Que gives you important *exclusives*, too. Remote control, for example. Toggle-action programming switches. Compact, ultra-reliable integrated-circuit design. And 15-amp power outlet for your movie projector.

Want capability that grows with your ambition? Just add

our companion Quadra Que 2 programmer, and get a total of eight channels, all still automated from a single track on your tape recorder.

Then there's the exclusive that may mean more to you than all the rest: programming sophistication without temperature. Even with the least expensive tape recorder, Quadra Que works perfectly every time.

If you're going into multi-image, go easy. See Quadra Que in action at any Spindler & Sauppé dealer, or write Spindler & Sauppé, 13034 Saticoy St., North Hollywood, Calif. 91605 (phone: 213-764-1800) for full details.

NAVA PREVIEW

Here are some of the significant pieces of audio-visual projection equipment and related accessories which will be on display at the National Audio-Visual Association convention in Houston, January 20-23. Items illustrated were chosen as those especially useful for today's varied business and industrial programs.

Today's buyer of audio-visual equipment can expect to see the greatest variety and options of equipment ever offered at the NAVA show. Modern design techniques and emerging technologies in materials, components and operational characteristics all combine to provide the potential industrial buyer with a wide variety of selection. Basically, the buyer can expect lighter weight, smaller size, brighter images and a tremendous flexibility with emphasis on ease and simplicity of operation from most of the 1973 equipment. Whether motion picture, slide, filmstrip, audio or video recorders or overhead projectors, buyers can expect the best in materials, workmanship and design in the equipment shown on these pages.

It should be noted that these equipment listings represent those supplied by the various exhibitors at the NAVA convention as the star items they will have on display, and are not intended as a complete directory. For a complete list of all currently available audio-visual equipment, we recommend the excellent 464-page NAVA Equipment Directory available from the National Audio-Visual Association, 3150 Spring St., Fairfax, Va. 22030.

Super 8 Projectors

DE JURE AMSCO CORP. will show a new Versatile Insta-Valometer Dual 8 movie projector offering automatic single-frame advance at various speeds and

"still" projection with 100% illumination. Instant stop-action. Northern Blvd. at 45th St., Long Island City, N.Y. 11101.

EASTMAN KODAK COMPANY will feature the new Supermatic 60 Super 8 sound projector at its exhibit. A unique, low profile design, instant loading of projection cartridges, two-way projection

—on to a large screen or on a built-in 6" by 8" Ektalite projection screen, 5-watt audio output are some of its features. List price is \$460. 343 State St., Rochester, N.Y. 14650.

FAIRCHILD INDUSTRIAL PRODUCTS DIVISION'S exhibit will have a full line of its "70" series on display, all

NAVA PREVIEW

with Super 8 magnetic sound and in a variety of cases. Freeze Action Control on all of the "70" series permits instant stopping of the film at a desired frame and with no change in light level. Can be activated by optional remote control cord. 75 Mall Drive, Commack, N.Y. 11725.

MPO VIDEOTRONIC PROJECTOR CORP. will show a new, smaller, lighter projector—the Compact—measuring only 14½" x 10½" x 5½" and weighing 15

pounds. Built-in screen, or can project on a wall or external screen. Cartridge load. 305 E. 46th St., New York, N.Y. 10017.

NORELCO TRAINING & EDUCATION DIV. will demonstrate the PIP system Super 8 projector which combines the

features of filmstrip and movie projection and permits animation, slow-downs, speed-ups pop-ons, freeze frames, all with sound sync. 35 Abnett Ave., Morristown, N.J. 07690.

OPTISONICS DIVISION OF ELCO CORPORATION will exhibit the new Optimatic sound/motion picture projector with self-contained screen. It is fully automatic, uses continuous loop Super 8 cartridges with instant stop. Weighs 11 lbs. 1758 West Grant Rd., Tucson, Ariz. 85705.

RETENTION COMMUNICATION SYSTEMS, INC. will display the RCS AV Set which combines Super 8 film and

magnetic tape and rear-screen projection. 2 Penn Plaza, New York, N.Y. 10001.

TECHNICOLOR, INC. will exhibit the latest addition to its broad line of Super 8 projection systems, the Showcase. It is a compact, rear-screen, sound projector in an attache case. Uses standard Technicolor continuous play/rewind cartridges. Weighs 17 lbs. Available with optical or

magnetic sound, and with stop motion. 299 Kalmus Drive, Costa Mesa, Ca. 92626.

HPI Filmstrip Viewer

Optimatic Projector

16mm Projectors

ALLIED IMPEX CORP. will show a broad line of Bauer projection and production equipment, including the P6 16mm projectors. The P6 Automatic 300

features a metal-arc lamp up to four times as bright as convention lamps. Other features: auto threading, optional change-over unit, fail-safe, switch. 168 Glen Cove Rd., Carle Place, N.Y. 11514

Filmstrip Projectors

DU KANE CORP. will feature a new Response Cartridge Cassette Commander among its broad line of filmstrip projectors. Automatic advance, and a provision for stopping the program to "hold" for

discussion or response are features of the new projector. Both response mode and normal operation may be used. Projector utilizes the Du Kane compact 35mm filmstrip cartridge. 2900 Du Kane Dr., S. Charles, Ill. 60174.

HUDSON PHOTOGRAPHIC INDUSTRIES will show a new line of inexpensive filmstrip viewers with 20 sq. in. built-in viewing screens. 2 S. Buckhout St., Irvington-on-Hudson, N.Y. 10533.

LA BELLE INDUSTRIES, INC. will show a broad line of sound filmstrip projectors, including the currently most popular model, the Courier 16, which uses the Commpak Slip-in Cartridge for automatic instant program changes. Cou

16 weighs only 15 lbs., has built-in screen, remote start/stop, permanently synchronized sight/sound, continuous loop, programmed stops for user participation. *Oconomowoc, Wis. 53066.*

HITACHI SALES CORP. will have an automatic 35mm single frame projector, Model SPR-770, on display at its exhibit.

cassette sound is used. Built-in 23½ sq. in. screen. 48-50 34th St., Long Island City, N.Y. 11101.

Slide Projectors

SENGER COMPANY'S GRAFLEX DIVISION will have an extensive line of slide and filmstrips projectors on display including the new Caramate, a 35mm air-screen sound slide projector with

Built-in screen. Synchronized cassette sound, record and playback, 9" x 9" screen, up to 140-slide capacity. 3750 Monroe Ave., Rochester, N.Y. 14603.

OPTICAL RADIATION CORP. will introduce a new high-intensity slide projector, the Xenographic 500, six times brighter than conventional 500-watt tungsten projectors. 4000 lumens output. Does not require special ventilation or permanent installation. Based on Kodak Ektagraphics projector with Optical Radiation light source. 6352 N. Irwindale Ave., La Jolla, Ca. 91702.

Video Equipment

AKAI AMERICA LTD., will show its new color video tape camera, CVC-150, weighing just 5½ lbs. and retailing for

\$3495. Compatible with all color video tape systems now in industrial use in the U.S. Lens is a 6 to 1 zoom. F2. Sensitivity range is 33 to 1. 2139 East Del Amo Blvd., Compton, Ca. 90220.

CONCORD COMMUNICATIONS SYSTEMS will show its entries into the ¾" Video Cassette market, Model VUP7510

Player and Model 7500 Player/Recorder, both compatible to the U-system. 40 Smith St., Farmingdale, N.Y. 11735.

JVC INDUSTRIAL DIVISION will demonstrate its CP-6000 U-VCR U-system ¾" Video Cassette Recorder/Player. Unique features are an optional timer, remote control, memory counter which

O.R. Xenographic 500

NAVA PREVIEW

provides automatic search, electronic editing. 58-75 Queens Midtown Expressway, Maspeth, N.Y. 11378.

PHILIPS BROADCAST EQUIPMENT CORP. will show its new record/play video cassette unit, Model N1481 Norelco VCR. Special features are light weight

and compactness or portability. Uses ½" tape at a speed at 6.75 ips. Unit is an N.T.S.C. version of the N. V. Philips European VCR. One Philips Parkway, Montvale, N.J. 07645.

SHIBADEN CORP. will introduce a new ½" EIAJ-standard cartridge video recorder, the SV-530. Will accept all previously recorded ½"-EIAJ tapes loaded into new cartridges. Features automatic

threading, piano key controls, automatic rewind, tape footage indicator, camera input, drop-out compensator. 5825 Brooklyn-Queens Expressway, Woodside, N.Y. 11377.

SONY CORP. OF AMERICA will demonstrate the latest version of its U-system video cassette recorders and players. The switchable NTSC-PAL U-matic permits

both American and West European systems to be played on the same machine. Two independent audio channels may be used for bi-lingual programs. 47-47 Van Dam St., Long Island City, N.Y. 11101.

Programming Equipment

COLUMBIA SCIENTIFIC INDUSTRIES will show an expanded version of

NAVA PREVIEW

its Media Master 1200 multimedia programmer. The new model programs up to 9 projectors rather than 5 and is available with a programmable dissolve rate

option. Special effects permit dissolve, flash and animate control of two projectors and fade control of a third. 3625 Bluestein Blvd., Austin, Tx. 78762.

SPINDLER & SAUPPE will introduce a low-cost dissolve unit at NAVA, the Selectro Dissolve Model 730. Capabilities include fast "cut" and medium dissolves, provision for mixes, flashes, pop-ons and animation effects. Other features:

remote operation, "glow circuit" for extended bulb life, ready light after dissolves, reverse button for backing up both projectors simultaneously. Selectro Dissolve lists at \$275. 13034 Saticoy St., North Hollywood, Ca. 91605.

Screens

DA-LITE SCREEN CO. will show the new popularly-priced Da-Lite Electrolet completely automatic screen. Clean lines

make it adaptable to any room or office decor. Available in 50" - 60" - 70" square sizes in beaded or matte surfaces. Warsaw, Ind. 46580

DRAPER SHADE AND SCREEN CO. will feature the Rolleramic Electric Screen which comes in 20 sizes up to 20'

by 20'. Available in beaded or matte surfaces. Spiceland, Ind. 47385.

POLACOAT INC. will exhibit the new miniature "Twinscreen" designed for table or desk top placement and for either front or rear projection. Crease-resistant front or rear projection screens snap on

to black anodized aluminum framework. Comes in handy leatherette case. Price is \$49 and up. 9750 Conklin Rd., Cincinnati, Ohio 45242.

Cassette Duplicators

INFONICS INC. will demonstrate the new System 200 modular-unit cassette duplicator. Available with reel-to-reel and

cassette master and slave modules—fully automatic for unattended operation. Capable of 10-15,000 Hz frequency response on cassettes. 1723 Cloverfield Blvd., Santa Monica, Ca. 90404.

PENTAGON INDUSTRIES, INC. will feature its Model C-1323 "Editor" Tri-Master Duplicator which works reel to cassette, cassette to cassette, and cassette

to reel. Half-hour reels to cassette can be made in less than 1 1/4 minutes. 4751 Olcott, Chicago, Ill. 60656.

TELEX will show a desk-top Cassette Copier I (master) and Cassette Copier (slave) that provide simple, quick operation for non-technical personnel. Each Model I makes one copy, which can

Model II (slave) will make two more copies. Two buttons and a track select provide complete control; all other functions are automatic. 9600 Aldrich Ave. South, Minneapolis, Minn. 55420.

Projection Lenses

BUHL OPTICAL COMPANY will demonstrate a new long-throw projection system delivering screen widths from 5' to 20' and projection distances from 10' to 200'. Called a "Screen Filler" the system

consists of a slide projector, prime lens Buhl's variable power optical module as a base for aligning the components. Permanent capabilities. 1009 Beech Ave. Pittsburgh, Pa. 15233.

Overhead Projector

T. M. VISUAL INDUSTRIES, INC. will feature its new Carri-Vue overhead projector which quickly folds down into its own compact case to fit under an a

lane seat. Weight is 18 lbs. Stage area is standard 10" x 10". 600 watt quartz lamp. 25 West 45th St., New York, N.Y. 10036.

Cabinets and Storage Equipment
RET FORD MANUFACTURING CO.
 will show "Mini-Pak" mobile equipment tables which ship disassembled for econ-

omy but offer similar rigidity to welded tables. 9715 Soreng Ave., Schiller Park, Ill. 60176.

ACK C. COFFEY CO. will have a new **LUXOR Media Center, Model LMC-100,**

picture parade

continued

brutally fought over, torn from the earth through mining, and then, finally, minted into coins that are today worthy collector's items.

Ron Van Nostrand, producer-cameraman and **Dick Norling**, assistant cameraman of Associated Producers, Inc. on location with "900 Fine".

The film, narrated by Burgess Meredith, was created for the General Services Administration of the United States for the purpose of making the public aware of the historical signifi-

with versatility for interfiling of several types of media on one shelf. 104 Lake View Ave., Waukegan, Ill. 60085.

NEUMADE PRODUCTS will feature a Video Tape Storage Cabinet for Half Inch Tape, Model HVT-225-G. Holds 225 Half-inch video tapes in their con-

cance of these valuable keepsakes of our American heritage. These mementos will be available for purchase by the general public on a bid basis through the General Services Administration in 1973/1974.

Urban Honolulu: Underside of Paradise

Da Kine Sandbox?, a Model Cities film on a multi-racial urban slum called Kalihi-Palama in Honolulu, features a spontaneous voice track of seven local citizens getting down to the nitty gritty problems of their community.

The visual trip playing over these voices gives viewers a candid look at the other-side-of-the-tracks in paradise where 33,000 citizens scramble to survive. The elusive answers to problems such as substandard housing, a lack of jobs, poor education and overpopulation are vigorously pursued by both the camera and the multi-cultured voices of these seven super-aware citizens of Kalihi-Palama.

Five months in the making, *Da Kine Sandbox?* was conceptualized and scripted by Michael Dougherty and filmed, edited, scored and mixed in Hawaii by George Tahara of Cine'-Pic Hawaii with his assistants Tiki George and Teri-tai. It was produced for the Office of Social Resources, City and

NAVA PREVIEW

tainers on six tiers. Has 12 dividers and clips plus two convenient pull-out retrieval shelves. 720 White Plains Rd., Scarsdale, N.Y. 10583.

H. WILSON CO. will show newly designed audio-visual tables, mobile cabi-

nets and mobile learning centers. 555 West Taft Dr., South Holland, Ill. 60473.

Audio-Visual System

HONEYWELL, INC. will demonstrate a new series of modular audio-visual remote control systems designed to be installed in conference, board and training rooms. The system is newly patented and operates touch-tone signals, either local or long distance. Can also be connected to a computer for programming purposes. P.O. Box 1010, Littleton, Colo. 80120.

County of Honolulu from a Department of Housing and Urban Development grant.

Never Underestimate the Power of Film

When I was in Los Angeles last month, a friend, convinced that I must not miss all the educational experiences of the big city, took me to an establishment on the Sunset Strip called the Classic Cat.

This is a bar with waitresses in considerable deshabelle, and with a little platform on top of the bar for go-go type dancing.

Next to the platform, attached to the wall, is a continuous movie projector showing films of football, boxing, surfing, etc., on the wall opposite the bar.

At one point in the proceedings, my friend nudged me and said, "look at that—wouldn't that make a good illustration for Business Screen?" Here was the go-go dancer on her little platform, stark naked—bottomless, as they call it in L.A., there was the projector grinding away on the wall right by her left elbow, and sitting at the bar right at her feet were four guys looking in the opposite direction from her, watching the sports films. Fantastic!

B.S.

WHY VISUALS?

Industrial Audio-Visual Association Meeting in Orlando stresses the need for more understanding of the basic tools.

Amidst all the brouhaha about the expensive and glittering new hardware now available to industry, A-V men were warned by key speakers at the Industrial Audio-Visual Fall meeting in Orlando, Florida, October 16-19, that the basic tools were still a most important key to effective visual presentation and should not be down-graded by more glamorous media. In a meeting planned by program chairman Calvin R. Gould of Martin Marietta Corp., IAVA men heard such speakers as Bill Walton, of IBM; Bill Buch, Lederle Labs; Russ Landgraf, of Marine Midland Bank; Ray Hollingsworth, United Air Lines;

and members of Martin Marietta's visual aids department describe new ways to get the most out of such standard tools as slides and overheads.

You can't get A-V men together for long nowadays, however, without discussion coming back to a new basic—videotape. Lee Coyle, of Ohio Bell, spoke of an exciting new video program his company is undertaking to step up employee efficiency, while Dave Kennett, also of Ohio Bell, described some of the technical problems the company has experienced and how they have been overcome. He had some good advice and warnings of pitfalls to avoid for neophyte videotape users. Jim Damon, IBM World Trade Corp., spoke of his experiences with the Sony U-Matic cartridge system, and Eugart Yerian, Holiday Inns, described his company's experiments with in-house broadcasts of cartridge video movies at various Holiday Inns. Lots of systems have been tested; almost all have had one shortcoming or another so far.

John Bussler, of Watkins Johnson Co., spoke of the new requirements for industrial security, and demonstrated how to go about "de-bugging" a conference room.

A day's excursion to inspect the visual communication facilities of the Tupperware Company, and of the Na-

IAVA President Harold Read, Liberty Mutual Insurance Co., speaking at opening session.

tional Aeronautics and Space Administration at Cape Kennedy, occupied one day of the three-day meeting.

Rounding out the meeting on the final day were talks on production techniques for the Norelco PIP system by Robert Hennkens, of M&C Company, St. Louis; a panel discussion on A-V dealers; and technical papers by Cal Gould on Diazo processing; precision slide mounting for dissolve use by Al Murdock, of Ford Motor Co., rear screen projection by Byron Benton, of Polacoat Inc.

New members who joined IAVA at the meeting were: Irwin W. Cook, R. J. Reynolds Tobacco Co., Winston Salem, N.C.; Norman E. Kenyon, Michigan Consolidated Gas Co., Detroit; Frederick W. Lloyd, American Republic Insurance Co., Des Moines; J. R. Matta, Westinghouse Electric Co., Pittsburgh; and Warren R. Williams, Dana Corp., Toledo.

"Are Audio-Visual dealers dependable when it comes to setting up a remote meeting?" Calvin Gould, Martin Marietta Corp., and program chairman, poses question to members, along with panel members Bill Dikeman, Penn Mutual Life, and Hal Fischer, NAVA dealer in Orlando.

"Some of them are all right, but some of them are a bunch of banditos!" Gerard Hall, National Cash Register Co., cited examples of shabby performance by A-V dealers in failing to provide promised services, overcharging and incompetence. Hall went on to say, however, that not all dealers could be tarred with the same brush. Some had provided excellent service. "You just have to know your dealers," he said.

No other lab in
the world knows as
much about filmstrips &
color slide duplicates
as HOLMES!

...because it's OUR World!

Since 1948 we've specialized in processing filmstrips and color slide duplicates. They're not a "side line" with us. They're our only business. During these 24 years, we've created our own unique equipment and developed many unusual techniques. Most important of all, we've instilled in every department an outstanding enthusiasm for perfection. That's why we say: "No matter what your material is, we can do more with it — and get more out of it — than anyone else." It's a promise... from the only lab that knows and cares enough.

**"The
package
solution"**

...to total
audio-visual programming

Somebody had to be first with one-stop shopping — and who could that somebody be but Viewlex!

Up to now, you've had to deal with a series of producers, writers, photographers, sound technicians, . . . and one or more equipment suppliers to put together a complete audio-visual program.

Now, Viewlex has it all. We've put the 'software' together with the 'hardware' to offer you a complete, simplified audio-visual systems service — the most effective audio-visual equipment plus a coast-to-coast network of experienced, creative "producer partners" to plan and prepare your film programs. And, when the program and the equipment are made for each other, you gain in effectiveness, simplicity, reliability, and, above all, you save money. It's a new idea and it took Viewlex to make it work.

Whatever your need — sales presentation, training program, P.R. program . . . motion picture, filmstrip, slides, tape, cassettes, records — whatever the size of your audience . . . one to one thousand — you can buy all or any part of the Viewlex package to fit.

Find out for yourself today what the Viewlex package can mean to you. Get your copy of "We Do It All." It's free. There's no obligation. Just call 516-589-6600. Or write

New Films

Bondit Corporation is using a new product demonstration motion picture, "Diaseal", made by **Pelican Films**,

of New York. The film shows how the Bondit Diaseal process joins materials together by resonating the molecules of a bonding agent with radio high

frequency. Sales presentation will be on Super 8 cartridge projectors.

National Carl Schurz Association, a German-American cultural organization, is presenting a new film, "Anywhere You Go", which seeks to counteract some American attitudes of ignorance and intolerance towards people of other nations. Distribution nationally is by Modern Talking Picture Service.

National Fire Protection Association is distributing two new films, "Bomb Threat! Plan, Don't Panic" and "Instant Arson-Testing Firebombs and Incendiaries" produced by **William Brose Productions**, of Hollywood. Films are concerned with the handling of bomb threats and with testing and demonstrating molotov cocktails and other incendiary devices for industrial fire prevention programs.

The Aluminum Association, New York, has a new film, "Aluminum Building Wire Installation Tips", which demonstrates that aluminum conductors are not difficult to install, but must be handled with different techniques than copper.

American Oil Company will soon present a new sales training package for dealers produced by **Fred Niles Communications Centers**, Chicago. The all-media presentation will stress

methods of gaining higher sales volumes with Amoco oils.

Deere and Company recently used 30-foot high "Tower of Visuals" for product introduction to consumers.

product dealers at Deere's Administrative Center Auditorium at Moline, Ill. Eleven projectors were used by producer **Ken Saco Associates**, New York.

Insurance Institute for Highway Safety is showing a new film, "Booby trap", which points out the man-made

THREE NEW 1" VTR UNITS FROM SONY

Sony Videocorder Model EV-320F — A color and monochrome video tape recording unit. Features capstan servo electronic editing, with a rotary erase head. You can take sequences from tape, off-the-air, live cameras, etc. and insert them into a pre-recorded tape with perfect synchronization.

Sony Video Color Pack Model CLP-B — Brings full color record and playback capability to Sony's EV-310 and PV-120 U Series Videocorder video tape recorders. Excellent stability and color fidelity.

Sony Trinitron Color Monitor/Receiver Model CVM-1710 — Use with video tape recorders and CCTV systems. Special circuitry and transformers allow input from VTRs, video cameras or any other video signal source.

hazards along the highways which kill thousands of drivers each year. **Harvest Films, Inc.**, New York, is the producer. **Winnebago Industries, Inc.** is celebrating the National Parks Centennial year with a new film, "Traveler, Traveler", made by wild-life film producer, **Bob Davison**. Film tours five of our most spectacular parks—Grand Teton, Yellowstone, Bryce Canyon, Zion and Grand Canyon. Distribution is by Audience Planners.

Information Service of South Africa is released "For the Love of an Eagle", about a young woman who befriends a South African black eagle and its newborn eaglet through kindness, patience and understanding. Distribution via Association-Sterling Films.

National BankAmericard, Inc. has a new film in national distribution, "Think of It As Money", produced by **Keith Merrill Asso.**, Cupertino, Calif. Film takes a panoramic look at the impact of bank cards on our society.

Dale Carnegie & Associates highlights the story of its founder in a new film "Dale Carnegie—A World of Confidence", produced by **Canyon Films, Inc.**, Phoenix, Ariz. Featured by Art Linkletter, Lowell Thomas and Mrs. Dorothy Carnegie.

U.S. Plywood Company has an an-

swer to the housing crisis in "Mod Mod Modular", produced by **Jack Fennimore**. Film focusses on the rapid growth of the modular housing business. Distribution by Modern Talking Picture Service.

The Maryknoll Fathers have produced a new film, "Campamento", on the founding of a "revolutionary" shanty-town on the outskirts of Santiago, Chile. Surprise: no priests or church buildings may be seen. Point: such a community could well be the first assignment of a Maryknoll missionary.

The Travelers Insurance Company is showing what it thinks about "No Fault Auto Insurance" in a new film of the same name produced by **Fred Niles Communications Centers**, Chicago.

De Beers Consolidated Mines has spectacular footage of volcanoes erupting—the source of diamonds—in a new film, "A Very Special Stone" produced by **Gerald Holdsworth Productions**. Distribution is by Association-Sterling Films.

Compassion, Inc. is a group dedicated to caring for orphaned children. "The Children of Compassion" is a new film showing how the Rev. Everett Swanson began his work in Korea in 1952 and how Compassion now

helps 23,000 children throughout the world. Modern TV, a division of Modern Talking Picture Service, distributes to TV stations.

Leisure Village is showing "The Freedom Years" about its housing developments for retired people. Film is designed for security analysts and financial specialists. **Pelican Films, New York**, is the producer.

National Gypsum Company is sponsoring a new film on Tectum II, a new insulating material, to be produced by **Fred Niles Communications Centers**.

Ford Motor Company takes its audiences behind the scenes in "A Car Is Born", produced by **Wilding, Inc.** Film

shows the advanced resources and vast amounts of capital required to design, engineer and manufacture cars and trucks.

Look at things both ways!

Wyman-Gordon Co. does—with two Da-Lite® Screens!

Wyman-Gordon Co. has a reputation for looking at things both ways before they make an engineering decision! And, they made a sound decision on projection screens by installing *both* a Da-Lite 6' x 12' rear projection screen *plus* a 7' x 7' Executive Electrol®.

The Da-Lite Executive Electrol disappears into the ceiling when not in use to keep the conference room uncluttered. And, with the Da-Lite Rear Projection screen, the remote-controlled projectors are out of the way too!

Da-Lite offers a complete line of electrically operated screens for easy "hang-up" or "built-in" installation, in sizes from 50" to 30' square, plus a full line of rear projection screens.

For all the facts, and the name of your nearest Audio-Visual Specialist, call or write Dept. B.S.

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Lighting Equipment

CENTURY STRAND INC. has announced the Featherlite 1800, a new lighting kit for motion picture and TV use. Weighing 31 lbs. and small enough to go under an aircraft seat, the Featherlite

1800 kit contains two 600w quartz focusing spots, one 600w quartz focusing broad, three quartz lamps, three heavy duty stands, cords, switches, extensions, gaffer grip, barn doors and scrims for each unit and an aluminum carrying case. 3411 W. El Segundo Blvd., Hawthorne, Ca. 90250.

Camera Accessories

RONFORD LTD. stainless steel and aluminum tripods in various sizes, with professional fluid heads, offering from two to 15 increments of fluid damping are now available from: (in the east) *Camera Mart*, 454 W. 55th St., New York, N.Y. 10019; (in the midwest) *Victor Duncan, Inc.*, 11043 Gratiot Ave., Detroit, Mi. 48213; and (in the west) *Alan Gordon Enterprises, Inc.*, 5362 North Cahuenga Blvd., North Hollywood, Ca. 91601.

ECLAIR CORP. OF AMERICA is now exclusive distributor of Zeiss 10-100mm Vario-Sonnar lenses with Eclair CA-1 mounts. The 16-element lens is said to offer image quality equalling that of fixed focus lenses. ECLAIR has also announced a new 400 ft. magazine for use with ACL cameras. All the features of the familiar 200 ft. model—fast, silent, accepts day light load or core-wound film, clips directly to ACL—are contained in the 400 ft. magazine. 73 S. Central Ave., Valley Stream, N.Y. 11580.

COMMUNICATION ARTS INC. has introduced a new crystal sync motor control interchangeable on all motion picture cameras. Light weight. Fits Cine 60 belt. Switchable 50/60 cycles. Out of sync warning light. Box 478, Bernardsville, N.J. 07924.

Editing Equipment

GUILLOTINE SPLICER CORP. has a new model 16mm professional splicer for precision tape application which permits butting film with tape dimensioned to

exact frame-line depth so that splices cannot be seen on the screen. Price is \$160. 45 Urban Ave., Westbury, N.Y. 11590.

W. A. PALMER FILMS, INC. has introduced a new magnetic film transport, Model PIA, which works with various models of Super 8 and 16mm projectors. It records and plays back separate 16mm

magnetic track in sync with projected motion pictures. Model PIA has its own motor but is connected with a flexible shaft to the projector. Forward or reverse operation in perfect sync is possible. 611 Howard St., San Francisco, Ca. 94105.

HAMTON ENGINEERING ASSO. have a new "Edistick", an inexpensive, light weight guide for editing Super 8mm film and full-coated 8mm magnetic tape. 735 Providence Highway, Norwood, Mass. 02062.

Video Tape

MEMOREX CORP. has developed the first domestic chromium dioxide tape cassette for the 3/4" video cassette recorder. The new chromium dioxide tape is said to provide higher output over conventional ferric oxide tape at high frequencies. *San Tomas at Central Expressway Santa Clara, Ca. 95052.*

Cameras

CINEMA BEAULIEU has announced the availability of a new 16mm "Euratom" medical motion picture camera designed particularly to operate under typ-

cally difficult medical film lighting situations. "Euratom" variable density d automatically adjusts to proper exposure. 14225 Ventura Blvd., Sherman Oaks, Ca. 91403.

TV Camera

PHILIPS BROADCAST EQUIPMENT CORP. has been demonstrating a new moderately priced three-Plumbicon tube color TV camera, Norelco LDH-1T, using light triaxial cable instead of conventional multi-conductor cable. Camera head c

be separated from C.C.U. by as much as 4,000 ft. without video compensation, making it particularly useful for medical schools, industrial studios and video tape production firms. *One Philips Parkway, Montvale, N.J. 07645.*

Largest Sales of Moviolas in History

Magnasync Moviola Corporation has announced the largest single sale in its 50-year history as 55 M-77 console editors were sold to The Camera Mart, Inc., in New York, for \$500,000.

Samuel "Chick" Hyman inspects the latest shipment of M-77 Moviola consoles. Record deal will bring 55 M-77's to New York.

L. S. Wayman, president of Magnasync/Moviola and Samuel "Chick" Hyman, president of The Camera Mart, who included the deal early in November, said that every major area of film making

in New York will absorb the new equipment.

Hyman pointed out that his company now has five factory-trained maintenance and repair men, and a complete supply of spare parts available to service the new Moviola horizontal editing machines.

Shipping of the Moviola consoles began last month. They are moving out to editing rooms all over the East almost as fast as they come in, Hyman said.

New Low-Cost Private Television Industry Launched

Plans for a nationwide system of hundreds of private, low-cost color television networks for use by business, institutions and government bodies have been announced by Microband National System, Inc., of New York. Microband, which has signed affiliation agreements covering more than 150 MDS applications and, as individual stations are granted licenses, will soon be able to offer customers interconnected MDS (Multipoint Distribution Service) on a national basis.

MDS operates in the 2150 MHz microwave band and involves omnidirectional transmission of microwave

signals to any number of points with approximately a 25-mile radius. The system encodes television signals so that they are picked up only at certain pre-designated reception locations.

Programs can be originated live, on film, on video tape, or with any other visual communications media from either remote locations or from central MDS origination studios and can be seen in color or in b/w.

Short Takes

Jack R. Rabinus, Marketing Director of WRS Motion Picture Laboratory, Pittsburgh, died October 24 after a short illness. As cameraman, writer, producer and director his credit line was on almost 400 TV commercials and over 100 industrial motion pictures. He had been with WRS since 1969.

Robert Finchout, Group Vice President of Association Sterling Films, said that nine out of ten motion picture theatres are now playing sponsored shorts. His remarks were made at a breakfast showcase presentation of the

life. He and his wife Roslyn, of 3 years, live in Alexandria, Va. with their son, Mark, who is an Audio Electronics Technician in the Foreign Service Institute of the Department of State. Mark is also a ham (W4GHA) and in the family tradition is also a musician, playing an electric organ.

As Chief, Motion Picture Service NOAA, Macklow is actually a Chief with very few Indians. Together with a capable Secretary Administrative Assistant, Ann Manning, and a Film Librarian, Marian Baillie, Macklow's department serves all of NOAA, which is made up of The National Weather Service, The Environmental Satellite Service, The National Marine Fisheries Service, National Ocean Survey, Environmental Data Service and other assorted organizations. He is mainly responsible for publicly distributed motion pictures since his group is within the Office of Public Affairs, headed by Stanley Eames. Macklow also provides consultation on technical films for use within NOAA.

N OAA has one of the best battalions in the country for national and international awards—about sixty awards for thirty productions. And beyond this, NOAA films are recognized in the film and education communities for a consistently high standard of excellence.

Macklow believes that a needed film has little difficulty in finding an audience, especially if the film was planned and produced with the audience and its needs constantly in mind. His problem is never finding an audience but rather having enough prints to be able to serve the public demand, which has always been high and is constantly growing.

Macklow's relationship with the professional motion picture production community is excellent. He feels that potential Government motion picture contractors should not have to invest considerable time or money for the privilege of bidding for government work. "We are complimented that a relatively large number of companies bid on our contracts," he says. "I am in favor of that. Often all that is required from the potential contractor is a suggested price. If possible, I like to stipulate a suggested price range in the invitation. Of necessity, price may be the first factor in the 'Government selecting-out procedure.' Then come the qualifying procedures in which only a few potential contractors are involved. In my industry-sponsored contracts I prefer to use a procedure where we stipulate the exact price a contractor has. We have \$45,000 to spend—will you provide for this sum?

WE UNBUCKLED FOR SAFETY

presto! exciting new reels and film cases
were born... simpler and safer than anything
you've ever used!

When we did away with belts and buckles, we also did away with buckling reels, cases and ruined film

Here's the secret. Our reels and cases are made of rocket-age Plio-Magic, the lightest, toughest, most resilient material ever used for shipping film. It won't dent, bend, crimp or bind, even in today's high-speed postal equipment. And it can't break apart! Our four built-in locks are completely impact-resistant. They open only when they're twisted by hand

With all this brawn, Plio-Magic is beautiful, too. Our cases come in sparkling yellow, red, light blue and beige so you can color-code your library to simplify retrieval. And it makes your shelves look great

If you want real safety and simplicity for your film library, you want the unbuckled case—Plio-Magic

money?" The motion picture industry seems to appreciate this technique. Government procurement officers probably cannot permit this procedure. Endorse more governmental use of commercial contractual audio-visual services and even less governmental in-house production."

Talking about Government films in general recently, Macklow pointed out that during the middle 1930's U.S. Government films like *The River*, *The Flow that Broke the Plains* and many others pioneered and led the way in the non-theatrical film field. "This was partially true even through World War II," he said. "But on the average, today, Government films (and many of my Government colleagues will not like this) tend to imitate, rather than lead. This statement is made as a challenge to Government film makers to dare them to be more innovative, creative, yes, and even controversial. Some years ago I made a private, informal, unscientific study and found that a Government insignia at the beginning of a film 'turns audiences off', particularly school audiences. This is the saddest commentary on the reputation of the average Government film. Many of our audiences have commented, supposedly as a compliment, 'NOAA films don't look like Government films'. To me this is a left-handed compliment. Government film makers must strive to counteract present public attitudes regarding Government motion pictures.

"Of course, I'm talking about Government films on the average. We have excellent Government films and talented Government film makers. Often Government or industry films fall short of their goals because of the 'environmental climate' in which the film maker must work. This climate usually strongly reflected in finished productions. To a great extent, the film maker can exercise considerable control of his work climate. If he can't, he should look for a new environment. Many film makers make no effort to affect their 'environmental work climate'. They complain that 'they will not let me be creatively innovative' . . . it's easy to sit back and complain and make excuses, rather than to understand, influence and even train the 'they'. The above is probably equally true in industry as it is in government.

"Government audio-visual activity has been on the ascent during my whole Government career," Macklow says. "And I see no peak to this ascent. There are always will be new audio-visual media and multimedia. As a boy I read Aldous Huxley and I am certain that someday we will have the 'Smell-s' and 'Feelies' as he described them,

LA BELLE

AUDIENCE-RATED

AUDIO/VISUAL EQUIPMENT

... the right answer to your communication problems!

Sound-filmstrips offer greater retention than movies and cost much less to produce. Program revision—improving—updating and replacement are economically practical.

What is your communication problem? Is it a sales story, assembly instruction, employee indoctrination, employee training, worker guidance, public image, public information, or the new dimension in education? Look to a good, practical sound-filmstrip to do the job most effectively at lowest cost.

However, just having pictures and sound is not enough . . . there must be a dramatic, convincing presentation . . . and that presentation needs proper "audience-rated" dependable equipment.

LaBelle offers a reputable line of reliable, rugged audio/visual equipment.

- **35MM FILMSTRIP**
with interchangeable programs.

LA BELLE COURIER® I
Completely portable — rechargeable battery — instant play and replay.

LA BELLE SENTINEL 35
TV-like, self-contained for small groups or carrels.

- **SIGHT/SOUND SYNC**
Adds sound and activates visuals for remote control filmstrip or slide projectors.

LA BELLE PLA-MATIC 83
Compact — ideal for built-in applications. Continuous loop tape sound with inaudible activating signals.

- **16MM FILMSTRIP**
Featuring 3-WAY COMMPAK Cartridge: interchangeable in "16" Series.

LA BELLE COMMPAK 3-WAY* Sound-Filmstrip CARTRIDGE

Continuous loop visuals and audio tape in a permanently synchronized SINGLE cartridge. No threading, no setup, no rewind, no turnover . . . slip in the cartridge—ready to show—ready for replay.

New programs can be delivered in COMMPAK cartridges. Existing filmstrip or slide/sound programs can be adapted. Cartridges easily carried, easily shipped. Label, catalog, and store like books.

***1 LA BELLE COURIER® 16**
Portable, self-contained for personalized communication.

***2 LA BELLE SENTINEL 16**
Self-contained, TV-like for small groups, carrels, displays.

***3 LA BELLE TUTOR 16**
Large screen projected image. Clear visuals, convincing sound. Compact — easy to carry.

along with our pictures and sound, through electrodes working on our nervous systems, so film editors had better make provision for at least a couple more heads on their editing equipment.

"In the early days," he continued, "audio-visual activity, particularly motion pictures, was considered a luxury. In some instances it still is, and therefore it is the first item to go with any kind of austerity. But it is fast being realized by both Government and Industry that *effective* audio-visual activity, particularly motion pictures, is a necessity, a timesaver, a money saver, an operational tool, but please pay special attention to that word 'effective' audio-visual activity. Otherwise, like any other tool, it is a waste and *should* be the first to go.

Looking back at some of the high points of his career, Macklow remembers with particular satisfaction the 14 years in which he represented the Department of Interior on the Government Interagency Committee on Auditory and Visual Materials for Distribution Abroad. "In 1951," he says, "I was elected by my Government motion picture colleagues on the Committee to represent the United States at the Edinburgh International Film Festival. This was one of the nicest, of many

nice things, the Government has done for me during my Government career. This selection of Government festival representatives by colleagues is no longer in existence. It should be reinstated. During the Festival I spent three weeks in Edinburgh, averaging only about three hours of sleep a night. I lost about fifteen pounds—that did me good—talking, seeing films, exchanging film ideas with the world's best motion picture documentarians. These three weeks probably contributed more to my value as a Government film maker than any other three weeks in my life. Probably no one realizes it, but CINE, born much later, was conceived during those three weeks, and I claim to be the father. Recently Dr. Carr, the President of CINE, endorsed this paternity. To explain, the Edinburgh Festival was receiving junk films from the United States. Anybody could send one. There was no U.S. clearing house for non-Government United States films. On my return from Edinburgh, in my official report, I recommended that an organization like the now defunct Film Council of America take over the screening chore. They did so for several years and then CINE inherited the responsibility.

trical short subjects for advertising, R and industrial people.

Writer/director **Larry B. Marks** has opened new offices at 211 E. 51st St., New York.

E. Robert Velazco has moved his music and effects service, Musifex, Inc., from New York to 1022 Wilson Blvd., Arlington, Va.

Robert T. Kreiman, President of Deluxe General, Inc. announced that his company has reached an agreement in principle to purchase Precision Film Laboratories, New York, from its current owner, Royal Business Funds. Burton "Bud" Stone will continue as President of Precision, reporting to Raymond A. Gaul, who will be Chief Executive Officer, as well as a Vice President of DeLuxe.

Optonics Division of Elco Corporation, Tucson, Arizona, manufacturer of audio-visual projectors and slide synchronizers, has sued Optasound Corp., New York, which makes motion picture sound synchronization equipment, for trademark infringement.

Plastic Reel Corp., Carlstadt, N.J. has won a patent infringement suit against Hollywood Film Company in connection with Plastic Reel's Pliomag line of film shipping cases.

U.S. Department of Commerce's Office of International Trade Promotion, Washington, D.C., will again stage an Audio-Visual Marketing and Training Aids Exhibition in Sydney and in Melbourne, Australia, May 14-24, 1973. U.S. manufacturers of A-V equipment are invited to participate.

Jamieson Again Heads ACL—Four of the five officers of the Association of Cinema Laboratories were re-elected at ACL's recent convention in Los Angeles. Above, **Bruce Jamieson**, second from right, ACL's president and head of Jamieson Film Company, Dallas, confers with his officer colleagues on 1973 planning. Left to right, **Preston B. Mergin**, executive secretary; **Findley J. Quinn**, president of Quinn Laboratories, Ltd., Toronto, newly-elected secretary; **Frank M. McGeary**, president of Motion Picture Laboratories, Memphis, vice president; and **William H. Smith**, president of Allied Film Laboratory, Inc., Detroit, treasurer.

The Social and Economic Statistics Administration of the Department of Commerce is again conducting an economic survey of motion picture production, distribution and allied film and tape services. All companies, in both theatrical and non-theatrical ends of the business, will receive the census forms in early January. The census is a major source of detailed information concerning the motion picture and tape industries in the U.S. Statistics gathered will be available by late 1973.

Sony Corporation has announced that it will produce more than 100,000 U-matic Videocassette machines dur-

ing 1973. 40,000 units were manufactured in 1972, 20,000 of which were sold in the U.S. and Canada.

Dr. Richard J. Goldberg, Chairman of Dymat International Corporation, has announced that scientists of his company have used a dye-transfer process to produce Super 8 color prints, said to be of high quality with excellent registration, utilizing low-cost materials on non-silver base film. Patents have been applied for. Development of equipment and mass-production techniques is now being undertaken. □

MULTIMEDIA CONTROL STARTS AT \$275

A Media Master control system can be as simple or as sophisticated as your needs and your budget dictate. It can be as basic as a five channel programmer that sells for \$275 plus cords. The Media Master 375 controls slide advance for up to five projectors. When used with optional output modules, it can also control movie projectors, VTR's, or the office coffee pot. It programs projectors or coffee pots individually or simultaneously in any combination.

If you need more pizzazz in your multimedia presentation, consider the Media Master 1200. The 1200 programs up to eight slide projectors and a movie projector. It also programs dissolve, fade, flash and animate effects and includes its own stereo cassette recorder. A new, optional feature permits programming of the dissolve rate. In short, it is a complete multimedia control system in a single case and small enough to fit under an airline seat. Ask us for a demonstration. The Media Master 1200 sells for \$2,900.

If you are planning a permanent installation system for your plant, school or office, consider the Media Master 2001. The 2001 is a modular system. You select the options and we plug-in the boards accordingly. The options include dissolve, reverse dissolve, programmed dissolve rate, animate, flash, slide advance, movie or VTR on-off, house lights, drapes, motorized screens and more.

We also manufacture projector stands and continuous loop message repeaters. For more information, circle the reader card in the back of this magazine or contact us directly.

LETTERS TO THE EDITOR

More on Federal Film Procurement

Dear Sirs:

Your editorial in the November/December 1972 issue of *Business Screen* on government bidding procedures for films caught my eye since a contract with which I had a great deal to do (writing work scope, reviewing proposals, monitoring performance, giving technical advice) was cited as a particularly horrible example. I refer to the Agency for International Development RFP issued June 2, 1971, and presume some further light on that one might interest you.

We got out the RFP as soon as was humanly possible, given the date when we first had the idea and the bureaucratic procedures through which we were obliged to go internally in order to obligate funds before the end of the fiscal year, meaning June 30, 1971. No one would have been more pleased than I to have had the RFP available sooner and I personally apologized to every filmmaker who interested himself in the contract. Most importantly, in terms of one of your piece's major implications, we damn well had *not* made up our minds about a contractor in advance.

In the end there were no fewer than 26 solid proposals. Not nibbles but proposals. Including a sample of work that was relevant to capability to make films under developing country conditions. I personally reviewed them all, spending at least an hour on each and far more on many. I also screened every film, always with one or more of my colleagues. I then chose eight proposals as acceptable to the concerned technical office and convened a panel of persons professionally knowledgeable in the film subject (family planning). This group reduced the number to five that were then certified to our contract office as acceptable. The low bidder among the five, Dick Young Productions, Ltd., received the contract which was signed at the eleventh hour on June 30. All in all a very arduous business.

Notwithstanding the circumstances of haste and our requirement for what amounted to a treatment, fully half the bidders later phoned or wrote me to say they thought they had received a fair shake. Which is a good time to point out that no proposal ideas were later "borrowed."

For what it is worth, AID had done very little film contracting and, quite frankly, I had not been involved

in any myself although the bidders uniformly seemed to think we had done a good job of saying what we wanted. The point is that I am not sure whether the AID example was an isolated instance, and thus untypical, or did indeed represent a more general government practice. You would know better than I.

In any case I am not really quarreling with the editorial. I hope it does some good and I have shot it along to our contract people. God knows that from my viewpoint there must be a better way than plowing through 26 proposals, nights and weekends, in the waning days of a fiscal year.

Edgar A. Comee

Agency for International Development
Department of State

Dear Sirs:

Your editorial in *BUSINESS SCREEN* for November/December was most appreciated. As a film company who bid on all three proposals which you discussed, we have grown very frustrated with the procedures outlined in your editorial.

Scott G. Anderson
Concept Films, Inc.
Washington, D.C.

Dear Sirs:

Your editorial in the November/December issue has stirred the hope that *Business Screen* might become the Nader Raider of the communications film industry. Your to-the-point remarks about the wastefulness surrounding the bidding for government production opens the door to discussion of other questionable practices in our industry.

One such—a blood relative of the ogre you discussed in your editorial has been on my mind for some time. I would like to initiate a discussion on the subject and would be interested in hearing the views of other producers and those who contract for the services of producers. Competitive bidding has led to abuses in the non-government production work, too.

Ed Schultz
Cinemakers Inc.
New York, N.Y.

Ed. Note: Ed Schultz will lead off discussion of procurement practices in our next issue. He'll be joined by other producers, and by industry sponsors who procure film production.

feedback *continued*

Eager Young Filmmaker Strikes Back

Dear Sirs:

We are *not* going to renew our subscription to your magazine for the following reasons:

1) Your magazine is for people and audio/visual firms over 65 years old, I'm sure. The letters you print from these people are unbelievable, and reflect a growing resentment on the part of these "older" firms for new and young ideas and talent. So, apparently, you are not interested in adding new perspectives to the business, but rather in keeping the new competition out, and old ways in. The sure way for the industry to die is to discourage any newcomers to enter the field as you are plainly doing.

2) We are a young firm doing very well and do not care for the idiotic advice of the old cronies you seem to invite letters from.

So, cancel our subscription, and here's to all the "Eager Young Filmmakers" that you are afraid of. After all, when you try to cancel out the competition, the product suffers, and we don't want that to happen here.

Constance M. Alter
Film Group, Inc.
Alexandria, Va.

a-v man *continued*

commented that the effectiveness of film music used in production from other countries far surpassed the film music of U.S. productions. While over the years we have closed this gap, I feel we still lag. Many producers catch in' music after all other parts of the production have been completed. By this time, most of the budget has been spent; the time for production delivery is overdue; the sponsors are impatient for the finished product and so we film makers tend to short-change the important musical score. The answer is to plan the music from the beginning and keep it in mind during all production procedures."

In thinking back on his career, Elton Macklow thinks that one of its greatest rewards is that every work day has been different, challenging, interesting. "Many people in Government and industry work day after day, year after year, with little in the way of tangible achievement," he says. "But when making films, there it is on the screen—your triumphs and your mistakes, larger than life for the world and for you to see. After every film, before the public gets to see it, I say 'I like it' and for me that's what counts. Thus far, the great majority of the audience has liked them, too—hecky for me!" □

SOUND EFFECTS

camera eye continued

Eroding Will to Work" which he notes is "becoming a formal preoccupation of American business." Films could help.

The Wall Street Journal carried a three-part series of articles on old people in America . . . "to be old and poor is to be alone, afraid, ill-fed and unknown." All too few films have dealt with the problems of and the help we need to give our older people.

President Nixon seems bent to war on "permissiveness" among our people. Are we slack and undisciplined? But James Reston, in a recent nationally syndicated column, asks whether Mr. Nixon's definition is precise enough or too partisan. Scotty Reston said "he has left the country with the impression that he thinks the welfare system is a mess, which it is . . . but he doesn't carry the good fight against selfishness and permissiveness all the way . . ."

Finally, it's obvious that old trade and political barriers vis-a-vis China and the Soviet Union are coming down. *Films speak an international language* visually; there's only a need for Mandarin or Russian sound tracks to help crack more barriers toward real international understanding.

Once, awhile ago, we traded films on modern surgical/medical techniques with professional groups in the Soviet Union. Let's trade *more ideas*, show our land and see the other fellow's.

"The Habit of Winning" Shown in Film by Former Pro Players

A couple of years before the untimely passing of professional football coach Vince Lombardi, the Dartnell Corporation sponsored an inspirational, motivating film on his leadership principles. Literally thousands of prints of this subject been purchased and used throughout America.

A logical sequel titled *The Habit of Winning* has been produced under the general direction of former all-pro Packer guard of those championship years, Jerry Kramer. Seven former Packer stars who have since become successful in business relate their success to the habits formed in those winning years on the Lombardi teams.

Willie Davis, at 37, today faces the pressures of business where the pressures of the past were faced on the football field. He and other stars such as Paul Hornung, Jimmy Taylor, Fuzzy Thurston, Max McGee and Henry Jordan relate their experiences to Kramer.

Vince Lombardi's voice comes through at the start and at the film's conclusion; his philosophy echoes throughout.

Modern announces a new program to reach more college students with your PR film . . .

4000 college theatres

The movie theatres most patronized by college students. In college towns, in big cities, wherever they may be.

We have carefully pinpointed them for the benefit of the business community, government agencies, professional societies and others who must communicate with that important but elusive audience, the college generation.

Never before has there been such a comprehensive list, so thoroughly researched. Or such extensive plans for circulating sponsored films to the college audience via theatres.

We're beginning a new program of promotion to theatres—by mail and personal contact—unlike any ever undertaken for sponsored films before. Theatres are using more and more sponsored shorts. College students are heavy moviegoers. Result: An unparalleled opportunity for you to reach the college audience.

Do you have a question about theatrical circulation? Ask the leader. Ask Modern.

ask the leader. **Ask
Modern.**

OUR 17 OZ. PLIO-MAGIC CASE TOOK ON A 4000 POUND CAR WITHOUT CRUSHING

THINK HOW IT STANDS UP TO NORMAL ABUSE!

Have you ever seen a case protect film the way this one does? With a full size car on top of it, our Plio-Magic 16mm 600' shipping case didn't crush, crack or break open. It's as good as new and so are the reel and film inside.

It's made of Plio-Magic, a space-age material that's tough, light and resilient. Combined with our patented positive-action locking design, it provides a reel and case unit that can easily take the abuse and shocks of rough shipping and automated postal equipment.

Just as important, Plio-Magic gives you special economies not offered by any other reels and cases. It costs no more because it lasts years longer. And it saves you up to 40% on shipping costs because it's so much lighter in weight. Our colorful brochure tells you all about our full line of Plio-Magic Reels and Cases. Write for it today.

PLASTIC REEL CORPORATION OF AMERICA

Subsidiary of Williamhouse-Regency, Inc.

Dept. B3, 640 South Commercial Avenue, Carlstadt, New Jersey 07072

Mr. Sam Getzoff
Eclair Corporation of America
7262 Melrose Avenue
Los Angeles, California

Dear Sam:

Enclosed are some production stills, shot while making Apollo 16 -- "Nothing So Hidden ..." as part of our contractual support to the Manned Spacecraft Center. We've also enclosed some film clips of the Mission Control Center at Houston.

In providing all Mission Control documentary motion picture coverage during manned spaceflights, our cameramen operate under difficult conditions. Besides an average illumination level of 16 foot candles, all footage must be shot on an absolutely noninterference basis. This is one of the reasons we went to the Eclair NPR early in the game: there is no extraneous noise to distract the Flight Director or Flight Controllers. We've shot under the most critical situations, without a single complaint.

Because of the noninterference rule, shooting sync sound on Apollo 16 proved particularly challenging. We rigged a Sennheiser shotgun microphone directly to the side of the NPR, connected to special circuitry we built to remote all audio and sync to the sound man 75 feet away -- leaving the cameraman unencumbered. Most NASA people didn't even realize we were shooting sound!

On the recent Apollo 17 mission, we used three NPR's to provide the same kind of coverage, with equal success. Thanks, to a great extent, to the reliability, flexibility and remarkable silence of our camera equipment.

Sincerely,

William W. Robbins
Vice President
NASA Motion Picture Production

creators in Audio-Visual communications • EXCELLENCE is our difference

Quite another sort of voyage took place during recent Apollo missions. The setting, Mission Control in Houston. The environment: low light levels; tight quarters; tense subjects...and silence an absolute requirement.

Filming with a condenser microphone actually mounted on the camera, A-V Corporation's professionals moved rapidly, inconspicuously -- recording the activities and emotions of NASA's Flight Director and Flight Controllers. Running thousands of sync-sound feet through their NPR's in the most critical situations without a single complaint

from Mission Control. More important, the capabilities of A-V's crew and its cameras translated the drama of space flight into first-rate documentary cinema.

If flexibility, reliability and utter silence are important to the way you shoot, you owe yourself more knowledge of the NPR. Ask to see one at your Eclair dealer's...or send for our fact-filled brochure to Eclair Corporation of America, 62 West 45th Street, New York 10036 (212) 869-0400 or 7262 Melrose Avenue, Los Angeles, California 90046 (213) 933-7182.

the projection room,

Flip-up screen.

For showing across the desk. To show across the room, flip down and project on any wall screen. (With a Kodak Ektalite projection screen, you can leave the lights on.)

Prices.

The playback model costs less than \$460, or \$490 with zoom lens. The playback-and-record model is less than \$580, also with zoom lens.

Magic mirror.

To raise or lower the image, raise or lower the mirror. Not the projector. It sits solid, keeps a low profile.

Instant playback.

Reverse the film on any frame, play back any sequence you like. Flip the lever and freeze-frame anywhere. There's also automatic threading, automatic rewind. All with this single control lever.

Crisp, clear sound.

Magnetic sound from a 5-watt amplifier, with jack for earphones or external speakers.

Cassette loading.

Accepts silent or standard magnetic sound super 8 film in one of four Kodak Supermatic cassettes. You can load them yourself, if you wish. Up to 29 minutes of playing time. Set up and show within 30 seconds.

Take it anywhere

you can plug into 110 volt, 60 Hz. (Weighs just 30 pounds.)

Use it to pitch, train, preview, introduce, entertain, storyboard, or sell. With color, action, and sound.

If you'd like more details about Kodak Supermatic sound projectors, call the dealer who carries Kodak professional audiovisual products. He's listed in the Yellow Pages under "Audiovisual Equipment and Supplies." Or send us the coupon.

Editing Equipment for motion picture and TV?

See Camera Mart.

1. CAMART EDITING TABLE Custom-built, heavy-duty all welded steel construction, genuine formica top (flush trim). Built-in light-well (9" x 12") with 1/4" frosted plexiglass. U.L. approved. 28" x 33" x 60" with light box \$139.95, without light box \$119.95, other sizes, prices on request. (Packing charge for deliveries outside New York City Area.)

2. CAMART FILM BIN • Rectangular construction—30" x 24" x 12" • Vulcanized fiber with reinforced metal frame • Double-row racks. Complete with rack and scratch-proof liner. With skids \$49.00, with casters \$56.00

3. EDITORS SWIVEL CHAIR Seat and back-rest are deeply upholstered with Durafoam. Mounted on heavy gauge steel seat pan 17" x 16". Adjustable backrest. All welded tubular steel frame. Without casters \$39.25, with casters \$42.65.

4. 16mm ZEISS MOVISCOP VIEWER Sharp 2 1/4" x 3 1/4" picture. Large magnifying screen, hooded against stray light, shows exceedingly bright image, right to corners. • Film can be run backward or forward, left to right. • Fits Precision sound base. \$180.

5. MOVIOLA SYNCHRONIZERS Easy to read. Easy to operate. Strong cast aluminum frame. Main Shaft turns on sealed, precision ball bearings. Film retaining rollers equipped with self-lubricating bearings. All parts machined for interchangeability. From \$140.

6. MOVIOLA OPTICAL SOUND READER MODEL SRB—35 mm—16mm, 35-32mm \$195. Moviola's versatile optical sound reader, reads left to right, right to left, emulsion up or down.

7. M-H PROFESSIONAL HOT SPLICER Cuts splices and welds in one operation. Low visibility splices made at frame line. Built-in "life-time scraper blade and holder." Precision, full fitting pilot pins. Thermostatically heated blades make perfect welds-fast. Model 135-16/35mm \$389. Model 116-8/16 mm \$264. Model 8/16S-\$314.

8. GUILLOTINE SPLICER • Precision machined for accurate registration. • For use with non-perforated Mylar or Cellulose Tape. • Cuts straight for picture and diagonal for sound 16mm Model \$155 35mm Model \$180

9. RIVAS MYLAR SPLICER Constructed to professional specifications for 16 or 35mm film. Registration pins align the film perfectly while the serrated cutter holds the tape firmly over the film during the splicing operation. Rivas 16 or 35mm straight \$165, diagonal \$175.

MULTI-IMAGE AUTOMATION OFF THE SHELF

1. **QUADRA QUE 1 PROGRAMMER**—Quality and economy in a 4-channel magnetic tape programmer, complete with built-in power relay for motion picture control—automate any mix of four projectors.
2. **QUADRA QUE 2 PROGRAMMER**—Expands Quadra Que programming to eight channels or adds four channels to a Dynamic Que Dissolve—in either case using only a single tape track for pulses.
3. **DYNAMIC DISSOLVE CONTROL**—First and still best solid-state, multi-speed slide dissolve control for S&S and Kodak projectors—unmatched fast-to-super-slow dissolves, plus dazzling special effects.
4. **QUE SETTE RECORDER**—A 3-track cassette recorder specifically designed for use with multi-channel mag-tape programmers—uses one track for pulses and two additional tracks for amplified stereo sound.
5. **DYNAMIC QUE DISSOLVE**—The multi-speed dissolve control with its own built-in programmer to automate "Cut," "Medium Dissolve," "Lap Dissolve," "Alternate" and "Standby" with pushbutton ease.
6. **MEDIA MIX PROGRAMMER**—The original "out-performer"—a 27-channel, punched tape programmer with built-in synchronizer—an entire stage crew in a 10-pound package the size of a cigar box!
7. **TRI CUT CONTROL**—One compact unit to create high-speed "Cut" dissolves on each of three pairs of Kodak slide projectors for multi-screen shows—the bridge between conventional projection and multi-speed dissolves.
8. **SELECTROSLIDE 900 SLIDE PROJECTOR**—shows up to 500 slides non-stop...shows 'em five times as bright...changes 'em up to three times as fast. This is the *serious* slide projector you've been hearing about.

In short, the whole show. Multi-image without mystery...or misery. We've solved the problems, packaged the answers, and put them on the shelf, world-wide. For more information and the address of your nearest Spindler & Sauppé dealer, write us today.

REVIEWS AND PREVIEWS OF NEW VISUALS

Films: Key Factor in New York Stock Exchange's Public Information Campaign

Fred Fugue, inventor, showman, businessman supreme, is the animated mythical hero of the New York Stock Exchange's new motion picture, *The One Man Band That Went to Wall Street*, now going into national distribution to general audiences, television and theatres.

One-Man Band follows the multi-talented Mr. Fugue's rise from obscurity to tycoon, commenting with good humor on the opportunities and pitfalls confronting an ambitious young entrepreneur. Along the way, he invents the Fugue Inflatable Theatre and the Fugue Remote Entertainment Device and learns how to attract the capital needed to finance his extraordinary ventures—by incorporating, by going public and ultimately, by qualifying for a listing on the Big Board.

Engagingly interwoven with the narrative are easy-to-understand facts about the history and operation of the Exchange, requirements for companies to become listed on the Exchange, the relationship between broker and investor and the all-important role of the stock specialist in the auction market on the Exchange trading floor. All of this is done with the clarity—and fun—made uniquely possible by animation.

The One-Man Band That Went to Wall Street was produced for the Exchange by Potterton Productions, Inc., of Montreal. Potterton is a contributor to *Sesame Street* and *Electric Company*, and was involved in the production of the Beatles' *Yellow Submarine*.

The film is the latest in a series of seven educational films produced by the Exchange since 1952. It is estimated that the films have played to audiences of some 250 million.

The Exchange, because of its uniquely central position and importance in the securities industry, has shouldered the responsibility of educating the general investing public during the last two decades. The Big Board film program has been an important factor in this campaign to explain the complex process of in-

vesting in layman's terms, introducing potential investors to the stock market, and giving them further basic information and guidance once they get there.

While it is difficult to evaluate the results of the film program in this campaign with a high degree of precision, the statistics available indicate great success. Some 250 million people have seen the seven films released since 1952; the number of investors has increased from 6.5 million then to 32 million today.

Eugene Miller, NYSE Senior Vice President, Public Relations and Investor Services, says, "There is no doubt in my mind that our film program has played a considerable part in the increased number and sophistication of investors."

Who else but Fred Fugue, once an itinerant performer, and now head of a huge entertainment corporation, could fill a stadium at the annual shareholder's meeting?

Audiences have seen these Exchange films on television, in theatres, and at investor, school, social, fraternal, business, religious and military group showings. They also have been shown at resorts and in airports around the country.

The Exchange's films are produced by its Public Information and Press Relations Department, under the direction of Assistant Vice President George B. Bookman. "While each of our films," Bookman says, "reflects the changes in movie-making styles over the years, our general approach remains constant. We receive considerable feedback from our member

firms and sources here at the Exchange about the information needs of potential and novice investors. With the aid of a film specialists, permanent on staff, we aim at producing films with both information and entertainment value. The two really cannot be separated."

Bernard Landou, who has headed up the Big Board's film and broadcast activities for the past six years, under scores Bookman's remarks. "Audiences have become so visually sophisticated—the average television set is on several hours a day—that nothing less than the best production values will do. We make informational films about the Exchange, but they have the same 'class' look that purely entertainment films have."

Exchange films, including the new *One-Man Band*, are distributed by Modern Talking Picture Service, with the exception of the television distribution of two older NYSE films which is handled by Association-Sterling Films.

Eugene Miller, in commenting about the future of the NYSE film program, says, "The Exchange is deeply committed to the use of film in public education and information. Broadening individual share-ownership, adding liquidity and continuity to the securities market is particularly important under today's stock market conditions. The wide appeal and effectiveness of film will be significant in making individuals more knowledgeable about the investing process and the Exchange marketplace."

Case History of Successful Canadian Pacific Film

Multiplicity, produced for Canadian Pacific by Crawley Films, Ltd., had a dual purpose—to serve as an educational guide to employees outlining the new corporate organization of Canadian Pacific, and to portray to the general public the nature of the overall Company operations in the field of transportation and resource development. Into one film it brought together CP Rail, CP Ships, CP Air, CP Transport, CP Hotels, CP Telecommunications, and various activities of CP Investments.

The film had its premiere at last year's meeting of Canadian Pacific in Montreal. The company then ordered about 100 prints, in English and French, and in 35 and 16mm. Ha-

Who produced 31,000 strip shows in 6 days?

Just who you might suspect... Color by DeLuxe.

But what you may not believe is the fact that within that mini-week not only did we convert the customer's transparencies into 31,000 film strips—we also put them in individual plastic sleeves and delivered them to his headquarters in the Mid-West.

That's probably a record. But when you're as busy busting deadlines as DeLuxe, yesterday's achievements soon become today's routine.

Which helps explain why the growth of our service to the Industrial, Educational and Medical markets is beginning to rival our growing dominance of motion pictures and TV.

So when you think of Color by DeLuxe, think of a complete communications lab. A lab that does everything from 8 to 70 MM film processing, video tape transfers, film strips, opticals, sound, developing and printing to engineering, cart-ridging and warehousing *world-wide*.

"Rating" the Film Festivals

In any game, everybody wants to be a winner. And in the film awards "games" there are certainly plenty of ways to win and a lot of events for players to enter.

The "dealers" in some of these "award-games" have become pretty professional about it, too. Laying on lavish banquets, making sure darn near everybody (who can afford one) gets some kind of medal, etc. But we're not sure that such prizes are worth the prices that are beginning to add up and, most recently, to earn the scorn of overseas observers who have attended some of these "parties" we've been holding.

This column has long ago provided some valuable clues on what we believe to be *cardinal principles* to use in judging the worth of film award prize-givings. But for new generations of players who have arrived on the scene since our last admonition-session, here we go again:

A. We believe that the first real measure of awards-contests is that Festival sponsor(s) attain *non-profit recognition*. The Internal Revenue Service is the sole judge of that status.

B. Public pre-entry announcement of qualified jurors is an essential, so that all entrants may determine the validity of those who will judge their films.

These principles are brief and simple. Let us apply them to present U.S. and overseas events you may consider entering. Here are the U.S. festivals which meet our criteria:

1. The National Safety Film Contest, sponsored by the authoritative National Committee on Films for Safety, is aided by the National Safety Council. Those who judge the nation's best safety-education films include top people in various safety-oriented organizations. After pre-screenings by specialists in specific subject areas at the National Safety Council, the finalists are judged by men and women who *know their subject matter*. The Bronze Plaques and other awards are publicly presented each year at the National Safety Congress. It's an *honor* to be a winner here!

2. The Annual Chicago International Film Festival, directed by Mi-

chael J. Kutza, Jr., is "broad-scope" in its program aims, including entertainment feature films, short subjects, tv commercials, etc. as well as Business/Educational Films. Wisely, this event went *non-profit* in status some years ago. And here is what Mike Kutza has to say about that event's approach to the subject of special interest to us:

"The Business & Industrial and Educational areas have expanded to such a size that they are now totally a separate festival at a different location and free to the public. They are (separately) held at The Museum of Science & Industry and at The University of Chicago. 1973 promises to be even more impressive in all areas.

"... We are a non-profit event; we do not stage giant award banquets that force the entrants to pay for their dinner just to receive their awards, etc. We feel there are more benefits to presenting their films FREE to the public, to teachers and to the business community, than holding it all in a stuffy hotel with no one at all screening the films, a practice of many of the festivals these days."

The man-in-charge said it himself. Let's look at a few other events which merit your participation, when you have something worthy to enter:

3. The American Film Festival, long sponsored by the members of the Educational Film Library Association and owing much to its dedicated founder, Emily Jones, is another not-for-profit event which primarily serves the educational field but recognizes the business-industrial sector with its annual "Blue Ribbon" awards. Don't expect lavish trophies and dancing girls but you do get honest recognition and fair judgment, from the viewpoint of educator-jurors.

4. Overseas film events are served by the Council on International Non-Theatrical Events (CINE) and the world's foremost business-industry showcase, Europe's annual International Industrial Film Festival, is one of those events which is cleared through CINE, on behalf of the official U.S. entering body, the National Association of Manufacturers.

CINE long ago received IRS clear-

ance to receive contributions as a most legitimate non-profit organization. Not all overseas events are as worthwhile but CINE *evaluates*, has observed abroad when possible and concentrates its entries among the *best* overseas events.

Regional screenings by qualified jurors are followed by Washington-based "finals" before any film receives the "Golden Eagle" and is sent overseas to compete for individual Festival prizes. No CINE volunteers are paid anything, not even their travel expense to Washington. CINE's experienced staffers work on tight budget aided by the National Education Association whose former president, Dr. William Carr now heads this fine organization. CINE has *earned* the utmost support of all of us.

Among regional Festivals, the long and devoted service to our media by the hosts of the Columbus (Ohio) Film Festival merits a final word of commendation. Sponsored by the Film Council of Greater Columbus (an also non-profit in character), it brings together many segments of this University city for careful judgment of all entries before the final giving of its annual and prized "Chris" award.

Atlanta, Georgia tries to do the same thing. Presumably organized to at least break-even if not to profit, we doubt that it has ever achieved either goal. Since our name has been used as an "advisor" without renewal or recent permission we note with regret that we have not been kept up to date on any of its recent plans or programs.

But we've given you some "clue" to what we believe to be support of participation-worthy Festival events. If you have any further doubts ask any of the leading distributors of business films; if you're abroad ask your country's member of the INFORFILM group, represented in the U.S. by Modern Talking Picture Service, Inc.

Now if you find yourself in the middle of the dancing girls, trying to pay for and eat a hotel dinner you didn't want while you wait to be called up for the medal you "won" don't say we didn't tell you.

Front Office Gives Top Awards Audience-Winning Films

The most valuable film awards of 1972 were not engraved on silver plaques or parchment scrolls—they were bestowed on hundreds of business and government-sponsored motion pictures by the free choice of club, lodge and community program makers; by program directors of commercial and educational television stations; and by the people who book films for showing to local cinema theater audiences throughout these United States.

A single national (and international) distributor of these films, Modern Booking Picture Service, has furnished a column with our requested analysis of 1972 audience results in all principal channels served:

a) Booking by request to community audience groups, owning their own and having ready access to 16mm and motion picture projectors.

b) Bookings of requested films to Modern terms "Resort & Campground Cinema" largely made during summer/winter vacation periods shown on 16mm sound projectors.

c) Bookings to "hard-top" and drive-in theaters with paid attendance.

d) Bookings by television station program directors for day and night showings, largely of 16mm prints.

e) Bookings of television "spots" consisting of less-than-a-minute news clips, public-service spots mailed to TV stations.

f) Showings in air terminal theaters, operated by Modern in principal U.S. cities and called "Skyport Cinema."

The combined audience, computed assigned reports of users or through audience measurement data (TV only) and by television rating services and audience results of TV commercial coverage, added up to an astounding 3 billion sponsored film viewers through Modern's channels of distribution in 1972. The exact audience total provided by the Service was 3,458,000,104 adults and young people.

With some 1,500 titles in distribution last year, Modern made 1,414,225 bookings to non-theatrical audiences in 1972 for a total of 3,165,800 showings to an audience of 130,250,873. To advantage to the sponsor-client in the multiple use of a "booked" print held by groups or in schools for several showings during the available period of use; the distributor charges only for the original booking. This non-theatrical audience (16mm projector-equipped groups) was comprised of 1,441,033 men, 8,902,378 women, 557,842 boys, and 38,972,207 girls.

Theatrical Bookings: 1972

Modern booked sponsored films into many theaters during 1972. A total of 30,638 35mm print bookings were made and these short-subject pictures were shown a total of 165,614 playdays for a total of 286,623 showings. The total theatrical audience, computed by paid admissions, accounted for a total audience of 37,838,518 persons in 1972.

It is noteworthy that such films must be of real audience interest; no theater operator risks the wrath of his paid patrons by using blatantly commercial or dull theatrical fare, especially when he is under no compulsion to fill the screen with other than the pay-to-see attraction. It is, therefore, a very high compliment to be selected by managers to appear on theater programs and many highly-interesting short subjects have received special marquee mention and unusual community response as patrons have indicated their approval of informative and entertaining content.

Television Bookings: 1972

There were 73,279 "free choice" bookings of sponsored film subjects through Modern in 1972 with 85,942 certified telecasts, reaching a measured and computed total audience of 2,627,573,000 viewers.

Here again, to attain program directors' approval and requests, such tv-directed short subjects must have public-interest value and excellent production value. Our subsequent in-depth analysis of the kinds of films the audience preferred in 1972 is revealing.

Skyport Cinema: 1972

The seven major-city air terminal "Skyport Cinemas" set up and maintained by Modern across the U.S. reach influential travelers during "between plane" waiting periods where they provide restful lounge quarters while dispensing interesting and relevant film fare.

Through these facilities, Modern made a total of 77,941 showings in 1972 for an accountable viewer audience of 1,519,813 men, women and young people.

Resort & Campground Cinema: 1972

An in-depth analysis of this Modern channel of distribution, wherein the resort or campground site may be supplied with 16mm sound equipment as well as carefully-selected 16mm programs shows that there were 61 resort circuits in operation at 1,279 locations during the past year. These summer/

winter, etc. resort audiences accounted for 176,176 bookings to reach 8,623,900 viewers in '72. Worth noting: families with spendable income able to vacation in such places comprise a most valuable sponsor audience in an extremely receptive, after-hours mood for such showings. They are largely "family" audiences and there were an average of 46.8 viewers at each showing. The "family" aspect is emphasized by the statistics showing that total adult viewers were 4,832,500 persons (25.6 out of the 46.8 viewers per showing) for a total adult percentage of 54.7 per cent. Here's more analytical background:

370 campground locations accounted for 53,297 showings to 3,037,100 viewers with an average per-show attendance of 57 persons. Of these, adult viewers comprised 1,512,200 or 49.7 per cent.

Formal resort inns at 909 locations accounted for the 1972 total of 122,879 showings to a total viewer audience of 5,586,600. Here, the attendance at each showing averaged 45.5 persons. The adult percentage in such audiences logically rose to 57.7 per cent as a total of 3,320,000 adults sat in on these sponsored film showings last year.

Television "Spot" Mailings

Extremely brief (often under than a minute-duration) news clips or other public service spot films comprise what Modern calls "a fast-growing segment of our services" and are handled by direct mailing to TV stations, usually requiring no return handling of the print.

During 1972, Modern dispatched 27 such titles to 1,963 stations and registered a total of 8,683 telecasts with estimated viewership of 661,657,700.

It's a comparatively inexpensive, generally successful, means of delivering an important or timely public-service message to the American public.

Distribution Audience Winners

The awards trophies garnered by sponsored films in 1972 will be great to admire but the greatest prizes of all for the managements and government agency heads responsible for film titles (and for the men and women who created and produced them) are in '72's audience figures!

Take public-spirited Kemper Insurance Company's recent films for example: through 13,794 community audience request bookings of that firm's *The Dangerous Years*, Modern accounted for a total of 1,414,242 viewers. The same sponsor's other titles in distribution, *The Noble Breed* (1,047,223 community audience viewers) and *It takes a Lot of Help* (1,446,083 viewers) brought a very gratifying total community audience

to Kemper of nearly 4 million persons in a single year'

Armour-Dial helped the cause of good grooming in 1972 and was rewarded with a total of 1,113,320 viewers of *Good Looks Here and Now* through Modern's community audience distribution last year.

What did theater managers think their audiences would consider worthy program fare in '72? Texaco, Inc. was a popular favorite with 2,489 theater-bookings for a total cinema audience of 3,183,014 persons who saw that company's film, *Magic Trails*. Also extremely popular was The Equitable Life Assurance Society's film, *Voices of Chicago*. Another 14 short subject titles each had theatrical audiences in excess of one million theatergoers.

The most successful television short-subject of 1972 appears to have been Exxon's (formerly Humble Oil & Refining Co.) film, *The Challenge of Santa Barbara* which accounted for a total audience of 18,755,800 viewers. The United States Office of Education film, *The Right to Read*, reached 17,278,900 viewers via Modern. J. C. Penney Company's title, *Wheelin' Easy*, had a total of 17,678,100 viewers in 1972.

Volkswagen of America's well-produced film on international trade, *In Spite of Walls*, now in its fourth year of distribution, continues among the leaders in TV audiences with 424 telecasts and 10,820,400 viewers.

The "Award" That Really Counts

It's the audience achieved by your film that really counts in the front-office. Prizes are dandy to fill office walls and to impress management, whether in government or private industry. But what did the picture do out there across-the-land or with specific groups for whom it was created?

Tens of thousands of influential groups meeting day and night are real judges in 16mm distribution; film program directors in the 509 U.S. VHF commercial television stations; the 186 UHF stations on the commercial side and the 93 VHF and 131 UHF tv stations in the educational field are the real prize-givers if your film merits their showing.

And the nation's 35mm hard-top and drive-in theaters remain open-minded about *really good* short subjects sponsored by business.

Coming up fast is the audience opportunity among 2,880 CATV Systems being urged to do more local programming.

The winners in 1973 will be those sponsors with films moving to their real objectives: the audiences which will judge the message. Frame your computer-analysis of distribution re-

sults on your wall.

Deere & Co.'s "Farming Frontiers" Hits the Road for Dealer Showings

The 1973 edition of *Farming Frontiers*, nationally-sponsored by farm implement manufacturer, Deere & Company, is on the road again! This annual film program, devoted to a "review of the latest developments and research in agriculture" is presented by John Deere dealers throughout the land.

Regional representatives of the parent company help set up showings at optional morning, afternoon or evening hours. In our "home" territory (Missouri's South-Central Ozarks country) the Stubblefield Implement Company at Alton held a morning program, topped up with a serve-yourself lunch and door prizes: the West Plains'

Deere dealer, Ozark Tractor & Equipment Co., staged the show at the Richards R-5 school in the evening, furnishing refreshments and door prizes.

It's the way films work, out there where they help sell farmers and ranchers on better ways to produce and better machines to produce with.

14th Int'l Industrial Film Festival at Biarritz in June

The world's foremost showcase of the industrial motion picture, Europe's annual International Industrial Film Festival, will move to Biarritz on the South Atlantic coast of France for its 14th event in June of 1973. CINE (the Council on International Non-theatrical Events) will again cooperate with the official U.S. entrant agency, the National Association of Manufacturers in the selection of U.S. entries. A maximum of 15 films may be submitted for all eight categories of the Festival.

The 13th Annual was held in Amsterdam, Holland last fall with only eight U.S. entries submitted. This prestigious event, which brings together entries from all Western European countries as well as those of

Japan and the U.S., is sponsored by Council of European Industrial group is the Conseil National du ronat Francais, the French equivalent of our own N A M.

U.S. Film Advocating Abortion Shelved After Protest Campaign

And while we're on the subject of government film spending, it appears that an official U.S. film, which includes a segment advocating legalized abortion and was slated for distribution to schools and colleges, has been temporarily shelved after a heavy letter-writing campaign by anti-abortion forces.

The "Abortion" sequence is part of the filmed version of the Presidential Commission on Population Growth and the American Future \$170,000 project. It was first shown in Washington last November on public television after the three commercial networks had previously refused to carry it.

Slidefilm on "Better Water" Brings Help to Rural America

Sometimes you can deliver vitally useful information via the comparatively inexpensive 35mm slidefilm medium. There's solid evidence of that in *Better Water for Rural America*, recently produced by the Commission on Rural Water and Demonstration Water Project (DWP) for the guidance of local and national groups who want to assist rural Americans to get better water and waste disposal facilities.

Communication Experts Belong on the Company Executive Team

SHAREHOLDERS will be comforted to note that the growing majority of chief executive officers of leading American business companies have come up out of the ranks of financial, legal and purchasing departments, with a goodly number of engineers now at the helm. That's good from the viewpoint of profits that make jobs, pay taxes and help insure economic health.

Meanwhile, out in the real world where markets are threatened by racial-boycotts, balance sheets affected by pollution-control costs, deferred to help pay for welfare hand-outs sans job requirements, today's hard-won black ink can't be too red all too easily when both public and employees are lead into ignorance and misunderstanding by demagogues of both labor and politics.

Our point: every corporate president's "cabinet" had better have a capable, active and strong communication's officer. The V.P. for Public Relations and the V.P. for Employee Relations are the two men you must have on your team, Mr. President.

Seven out of ten rental cameras are Arriflexes. Why?

Every rental agency has a reputation to protect. Camera breakdowns would ruin it, of course. And they'd rather have their gear out on rental than in the repair shop or on the shelf. That's the secret.

Reliability?

So it's their business to know which equipment is the most dependable. Arthur Florman, President of F&B CECO, says: "It's the backbone of our rental departments for many years, Arriflexes have proved themselves trouble-free and simple to maintain."

Familiarity?

Director of Photography Fuad Said uses seventy-two Arriflexes in his Academy-Award winning Cinemobiles. Says Mr. Said: "Everyone knows how to use an Arri. You can hand one to a production crew anywhere in the world, and they'll be ready to go."

Service?

Film maker Gerry Feil lost an Arri 16S when it was swept

away by a torrential river in the uncharted jungles of New Guinea. His short-wave radio request for a replacement was relayed to the Arriflex factory by telegram.

A new camera with the correct motor, cables and lenses, plus proper customs documents, arrived at Port Moresby in New Guinea *three days later*. Service like that impresses rental agencies concerned with "down time."

Versatility?

The more *uses* a camera has, the more people are likely to rent it. For example, people have used the Arri 16S for hand-held footage, animation, time lapse, microscopic study, shooting titles, kinescope recording, and on a sound stage, (blimped), shooting lip sync.

Not bad, for a camera whose basic body weighs only six pounds and lists for around \$2680.00.

Toughness?

You've probably heard it said that such-and-such is "not a rental camera." This means, simply, that it can't stand up to the treatment it gets from rental users, day after day. Well, obviously, the Arriflex camera can. *It's worth thinking about.*

paradox

BY STANFORD SOBEL

PARADOX: Overhead is underhanded

One of the major concerns expressed in letters to me is that of pricing scripts. Producers ask how much I charge, writers want to know how much they should charge, and clients are interested in finding out whether they are overpaying for scripts. It's a fascinating subject with all kinds of ramifications. One of the most important ramifications is the question of overhead . . . which has to be included in any pricing structure.

If you ask an accountant what overhead is he'll include such obvious items as rent, typing services, wages, telephone, stamps, all the normal fixed and variable cost of doing business. And, although some people will not allow these costs to writers, most people will admit that it's fair to charge for them. I still have a very small number of customers who insist that a writer doesn't really have any overhead, but somehow manages to keep every penny he collects.

Actually, the true definition of overhead, unique to writers is as follows:

"Overhead is everything a writer does when he's not productively engaged in writing."

Now if that seems simplistic to you, let me take you through a few of the implications. Notice the last three words of the definition: ". . . engaged in writing . . ." And many people confuse writing with typing. The two are

separate and distinct, although they are related for many writers. When I was young, I shared an office with Gordon Miller, a very inventive and original writer, who wrote all his scripts in longhand on legal pads, arguing logically that Shakespeare never used a typewriter, so why should he. (I answered that he *would* have if he had worked for Wilding.)

In my own case, since my handwriting is illegible, I have always done all my writing of every kind, including most revisions, on the typewriter, and I have had a typewriter since I was in high-school. In fact, my first typewriter was a gift from three of my high-school teachers who felt that I might have something interesting to say, if only they could read it. It was a wonderful, "antiquey" old Oliver, which was truly portable.

The keyboard had only three rows of keys and each key had three characters, and there were two shifts, an upper and a lower. The entire keyboard could fold up against the platen. In a suitcase, it took up less space than a miniature cassette recorder does today. I used it until I wrote a play on it my senior year at Michigan, which won a Hopwood award. I bought a new typewriter with some of the prize money, and gave the Oliver to a young lady in appreciation for . . . but that's another story and a different column . . . probably in a different magazine.

Anyway, one difference between *typing* and *writing*, is that by the time I sit down to type the actual first draft of a script, I have already done a great deal of the writing . . . in my head, of course. And in most cases I have made some notes about the script on file cards or a notebook that I keep instead of money in my pocket.

Jack Rowles, who, like Gordon Miller, is no longer with us, used to say that the most valuable time a writer spends is when he's sitting back in his chair, staring out the window, and, in fact, he once wrote an ad like that which ran in this magazine some years ago. At my home we have many good-natured jokes about writing and one of them has to do with my work habits. Coming home from school, the children often see me lying prone on the couch with my feet high over the end and my eyes closed. One day a

neighbor boy observed this and asked my oldest son, "Why is your dad sleeping like that?" "He's not sleeping," was the disgusted answer . . . "He's working on reel two . . . whatever it is."

My family assumes that I am writing, even when I just sit and stare because they know I am always trying to solve some creative problem. It has been my own experience that only a few people in our industry even sit down and *think* about what they are doing . . . actually face the problem facing them. I find, for example, practically no producer ever knows what it is he wants to accomplish with his business . . . they almost never have long term goals for their own company. And . . . they resent anyone bringing up the subject.

Sometimes people who call the office are referred to me at home, almost invariably they assume I am "taking the day off." But, in fact, my home is a working environment. It is where I do most of my productive writing . . . thinking, problem-solving . . . and creating. I am fortunate in having conditions myself to work in almost any environment, but my office in New York is the most difficult situation in which to write. Most of the time I spend there is, in fact . . . you guessed it . . . "overhead".

This overhead includes such activities as screening films for prospective clients . . . attending recordings and meetings . . . reviewing storyboards with designers . . . casting with clients . . . talking on the telephone with agents and other writers and people looking for work and young people who want to get into filmmaking profession . . . reading scripts to clients . . . arguing with producers about how much certain scenes will cost to shoot . . . waiting for the elevators . . . outrunning little old ladies with umbrellas to beat them to cabs at 4 p.m. . . . trying to get a reservation for a flight that's oversold . . . and, of course traveling to jobs out of town. In the calendar year of 1972 I was on an airplane or train a total of 60 days out of the year. I don't mean commuter trains, either. I'm one of the unfortunate New Yorkers who has to drive to work. So I like

BY HUBERT WILKE

TIMES SQUARE ON THE CEILING

by Raymond H. Wadsworth

Thinking about a brief introduction to the accompanying article somehow reminded me of an old song. It is a haunting refrain with the implausible title of "Dancing on the Ceiling". My guess is that it came to mind only because nowadays that's about the only thing we don't try to do on the ceiling.

In retrospect it is hard to imagine that there was a period of time when the only thing on a ceiling—was the ceiling. After Mr. Edison extinguished the gaslight era, ceilings began to house new forms of lighting. And that was the beginning of the end of the simple ceiling. Ceilings have never been the same since, and there appears to be no end in sight.

With the increase of competition for ceiling space, it is time for the A/V interests to stand up and be counted. If not counted, at least, recognized.

With this in mind, our Senior Associate, Ray Wadsworth turns his attention to 6 ceiling mounted microphones, 24 loudspeakers, 8 sprinkler heads, 7 air conditioning diffusers, 24 wall washers, and banks of high intensity directional lamps as he welcomes you to the hottest spot in town—Times Square on the Ceiling!

The ceilings of today's corporate activity rooms are, square foot for square foot, probably the busiest of any of the surfaces that enclose the space. It is paradoxical that the design of such important areas as board rooms, committee rooms, management information centers, conference rooms, and meeting rooms, should evidence such little appreciation for the importance of the functions that have to share the ceiling.

It's quite usual to hear the client ask the space designer to give him a change in ceiling appearance for his meeting rooms—something a little more imaginative than the monotonous building-standard tile squares found in all the corridors and general office areas. The same goes for the lighting—must the client have 200 footcandles of building-standard eye-straining fluorescent lighting pouring down over the conference table?

The answer to these kinds of questions is, of course, quite logical from a practical standpoint—building standards have been introduced not only to save money, but to simplify construction and produce uniformity of design and appearance. In the case of ceilings, however, it is unfortunate that standards are developed for the less important areas, then automatically applied to other areas as well. While fluorescent lights, for instance, are perfectly satisfactory for general office areas, and corridors, they leave something to be desired in board rooms, seminar rooms, management information rooms etc., where the use of audiovisual systems is contemplated. In these instances, there are many reasons why building standards are not optimum. A flexible, fully controlled lighting system is a must for important activity rooms. For this reason alone, incandescent lighting is

preferable. It is true that fluorescent lighting systems using the newer solid state controlled rectifier solid state dimming devices can be very satisfactorily controlled in regard to dimming but there are still the drawbacks: special ballasts (preferably remotely located) for use in such dimming systems, non-uniform light tube response as the circuits are dimmed, certain tubes which are prone to flicker when reaching the permissible lower threshold of brightness, and frequent maintenance to replace blinking or off-color tubes. In addition, fluorescent tubes require rather large fixtures, which occupy a good portion of the ceiling space.

On the other hand, incandescent lighting consumes more wattage when it hurts—that is in the lamp filaments themselves, for equal levels of illumination and this produces more conditioning load. The difference air conditioning load is not as great as is often supposed however. Typically, in a board room measuring 28 feet long 28 feet wide with a ceiling height of 10 feet, the substitution of incandescent lighting for fluorescent would amount to about ¾ ton of refrigeration, thus increasing the room sensible heat gain from 3½ tons to 4¼ tons of refrigeration. This is a small penalty to pay in exchange for the benefits gained.

The point here is that in a room where the audiovisual function is of prime importance, a compromise between using fluorescent lights and providing excellent viewing environment with infinite light control on an incandescent system should not have to be made—the room function should dictate the kind of lighting to be used.

No less could be said about the need for loudspeakers in the ceiling. If there is one thing that turns a signer off, it's the thought of "ruining" a non-building-standard ceiling with two dozen loudspeakers. Here he acceded to the client's request—designing a beautiful ceiling for an exciting multi-purpose meeting room only to have the AV consultant tell him that 24 loudspeakers are required.

Hubert Wilke is president of Hubert Wilke, Inc., an international organization specializing in communications facilities design and programming consultation.

to the ceiling! Up to that point lighting fixtures and beveled ceiling squares were the only matters of concern. But that's not all! Now it turns out that ceiling-mounted microphones, eight sprinkler heads, seven air conditioning diffusers, 24 wall washer fixtures, and banks of high intensity directional lamps for television pick-up are also being housed in the ceiling.

It might be a good idea to stop here, and take a closer look at the junctions (and the reasons therefore) that are causing such a headache of conflict with the aesthetics of the ceiling.

The Ceiling Itself

Finished spaces, except for those classified as work areas such as certain TV studios, TV control rooms, storage areas, mechanical and electrical equipment rooms and the like, require a finished ceiling. In recent years, ceiling space has become so important, especially in activity rooms such as those mentioned earlier, that the acoustic tile grid system has become very popular. With this system not only is access possible, but penetration for the installation of any items designed for ceiling mounting is easily handled.

The hung ceiling of composition material serves another important function—and that is control of the internal room acoustics. This has also been achieved by the use of acoustic plaster. However, this material is becoming increasingly harder to obtain due to environmental restrictions connected with the use of asbestos in its manufacture.

Where ceilings are designed to take advantage of the sculpted look, with beveled panels and smart light fixture arrangements, the appearance becomes of prime importance. While manufacturers of ceiling systems have recognized the need to start incorporating specialized air conditioning slots to permit uniform and draftless distribution of conditioned air, they have not been so mindful of the needs for ceiling loudspeaker installations.

Ceiling Mounted Loudspeakers

Loudspeaker enclosures, with their perforated flush ceiling plates, have always been considered an intrusion into the ceiling space. Consider the thought of the AV consultant, who can't put a loudspeaker in the screen, well above the center of the screen, which is where it belongs, because the ceiling height has been made so low that it cannot accommodate anything more than the four feet required below the screen, plus an undersized screen height of four feet, plus six inches above the screen for adequate

trim.

Even if it were good practice, which it is not, he could not place a speaker on each side of the screen, because sliding panels open to show the screen and consequently come to rest directly in front of the loudspeaker locations.

Normally he does not like to put the speaker below the screen if audience seating is rather high density, because sound projected around the knees is not the best arrangement. The client doesn't like the idea of rolling a portable speaker into the room, and the space designer doesn't like a piece of furniture functioning as a loudspeaker. So where can the speaker be located? In the ceiling! Now, normally this does not seem too bad, except that the 55 degree angular cone of sound leaving a ceiling speaker doesn't have a chance to spread very much in traveling the short five or six feet downward to the listener's ear level. Consequently, a dozen or more speakers are needed to adequately blanket the listening zone with low volume sound. Only in this way can we achieve high intelligibility—which after all is the main purpose of the sound system.

There are two advantages that accrue from the use of ceiling speakers used to carry the program sound, such as 16mm film sound and audio tape sound. The first is that we have a built-in system just right for voice amplification of lectern speech, and secondly, we likewise have a perfect speaker system to distribute conference call telephone conversations for group participation. In passing, it must be said that some realism is lost when watching a film and hearing the audio from above rather than from the image, but for all but the largest rooms, the ceiling system is very satisfactory.

It is worthwhile to note that manufacturers have come out recently with very handsome speaker grilles and well-designed enclosures—but the problem is to get the space designer to accept them as a vital part of the ceiling.

3. Ceiling Mounted Microphones

There are many instances where ceiling mounted microphones are necessary, for such purposes as monitoring what is going on in the room, voice pick-up from a conference table, and for conference telephone pick-up. Here again, the ceiling is not always the best location, but other arrangements are unacceptable for one reason or another. For example, some clients want nothing on a board room table that would detract from its appearance, such as twenty or so microphones. Others will not permit con-

cealing of even miniature microphones if it means cutting holes in a \$25,000 table. In other cases, a specially configured table is not practical from a budget standpoint.

It is fortunate that microphones can be mounted rather unobtrusively in a ceiling—but they do contribute to the general confusion of that sacred place.

4. Lights

Lights, of course, are one of the reasons for having ceilings. They usually occupy from 50% to 100% of the ceiling area, and take precedence over everything else in the ceiling. The pattern of lighting fixtures in the ceiling is, of course, inviolable, especially in perimeter areas of a building, which can be seen from the street. When adjacent rows of fluorescent fixtures are used, there is often not more than two rows of tile squares between, and this makes a problem, in attempting to center an 8" diameter loudspeaker hi-hat in the center of a 12 x 12 tile and maintain symmetry.

5. Air Conditioning

Many of the newer distribution systems are featuring continuous slots in the ceiling and, of course, the combination of light fixtures combined with air passages are finding increasing use. While these devices look neat and compact from below, the ductwork that serves them occupies much of the above ceiling space, further limiting the placement of loudspeaker ceiling enclosures.

6. Sprinklers

While not usually a problem in the average room, there are many cases where an entire floor in a new building is set aside for an audiovisual complex, with training rooms, large meeting rooms, etc., which causes an occupancy density that exceeds the fire code allowance unless the floor is sprinklered. Naturally this happens in the very spaces where ceiling loudspeakers are needed for good audio.

From a consideration of all that goes on above our heads, there is probably one point of agreement—and that is—the ceiling is certainly a busy place. □

Ray Wadsworth is a senior associate of Hubert Wilke, Inc., and a leading authority on audiovisual projection systems.

a-v man

Lee P. Coyle, Division Information Manager, Ohio Bell Telephone Company, is Business Screen's **A-V Man** in this continuing series of profiles of leaders in the industrial audio-visual world.

As with many people in industrial visual communications, Lee Coyle backed into the field. Ohio Bell wanted to produce an industrial development film, and he was selected as the project supervisor. To hide his ignorance he was instructed to follow the director around and look earnest. That lucky break occurred nine years ago. He has been an A-V man ever since and has developed a deep affection for visual communications.

"I've been a newspaperman, a teacher, a writer, an editor, and constructor of annual reports," he said recently, "but never have I been more delightfully involved than I am now. Few communicators ever get the opportunity to develop and make full use of the talents demanded by A-V media. For though visual communications gives free play to the imagination, it also imposes the rigid discipline of achieving a sensitive balance among words, sounds, and visuals."

Before becoming involved with industrial communications, Lee Coyle

was a college English teacher, and he has been balancing his interests in the academic life with his business career for many years. Luckily, in his case, both sides have complemented each other. While serving in Ohio Bell's public relations department, and presently as Division Information Manager, he has at the same time earned a Ph.D. at Western Reserve University, has published two books on American literature and is currently working on a biographical novel about Mark Twain. He has been a lecturer on visual communications before many industry groups, and has written a number of articles on such disparate subjects as William Dean Howells, multi-media presentation, Mark Twain, and video cassettes.

After broad experience in all phases of public relations work for Ohio Bell, Lee Coyle is now manager of the company's Visual Communications Center, a sophisticated complex which he proposed, designed and staffed. Most of his work in the Center is in CCTV, 16mm motion pictures and slidefilms. His greatest activity is presently in the area of television. The Center is involved in communications in the broadest possible sense and has made significant contributions to employee information, training, news, and has successfully used television to change behavior. As a result of the freedom given Coyle and his staff by an unusually enlightened philosophy of management in the Public Relations Department of Ohio Bell, he has had free rein in the area of experimentation. As a result, the Center has produced some exceptionally innovative programming. Coyle is responsible for software as well as hardware and purposely makes time to write scripts, direct projects and do whatever creative work is necessary to keep himself alive and free of the "pernicious tendency of becoming merely an administrator." He has a top-notch staff of twelve people including engineers, scriptwriters, directors and cinematographers. But the lines of organization are kept loose to enhance both creativity and productivity.

"Our engineers come up with creative ideas," Coyle says, "and our cinematographers direct projects. Scriptwriters are also producer-directors and, upon occasion, cameramen. I try to give each person a crack at whatever he'd like to try his hand at. I share the managerial freedom given to me with my staff and on the whole the response has been excellent. Good people keep earning freedom through high productivity and responsibility."

One of the greatest strengths of the Bell System lies in the value it puts on training, and Coyle has been en-

couraged to learn and continue to learn. "The most valuable opportunity I've had to develop myself has come through membership in the Industrial Audio-Visual Association," he says. "It is the only professional organization I've ever belonged to that has won my unqualified respect and dedication. Imagine attending a conference which goes from 8 AM to midnight every day with minimal attrition: the evening screenings; I seldom go to an IAVA meeting without returning with at least one major idea that can use to substantial advantage. I honestly lose much of whatever cutting edge I have were I unable to attend IAVA meetings. The limited size of the Association and the intense devotion of the members to both the software and hardware aspects of A-V have been invaluable to me and Ohio Bell."

Coyle has won wide recognition for his work in audio-visual communications. His films and tapes have won awards at some seven film festivals. In fact, one appears in Business Screen's "Most Honored Films 1972" compilation in this issue. He is a past president of IAVA and has received its award for "outstanding accomplishment and leadership in the audio-visual field."

Lee Coyle has positive ideas about the position of the A-V man in industry today and his future. "If one thing is slowing the progress of A-V in industry," he says, "it's the imbalance between hardware and software. Ideas have greater value than gadgets, but many instances A-V men have tended to become gadgeteers rather than communicators. The outstanding A-V man has to stand off from the golden machine and reflect deeply on the problems of his business and how he can help in their solution through A-V media. Instead, the tendency is to build electronic pyramids and spend intellectual resources in plots to get quads, programmers, etc. I think the ideal A-V man has got to be part poet and part businessman. He can lead all he needs to know about hardware through IAVA or by other means. What I'm trying to say is that there's just not enough soul in A-V today. But it's coming. As soon as the writers and editors of all those sick and dying industrial publications wake up and reach out for a share of the A-V action, we'll begin to equate the value of ideas and the costs of machine. Then you'll see more than a spurt of A-V activity, you'll see visual media especially color television—assume its dominant role in industrial communications. You'll also witness the emergence of a totally new breed of A-V man. I'm excited at the prospect."

Whatever camera turns you on...

we'll turn it on.

Whatever the shooting situation, the exclusive Cine 60 Power Belt gives you the voltage, current and *proven reliability* needed to run every professional camera on the market. Plus the unhampered mobility to go wherever the action is.

Just buckle it on, plug it in and you have convenient go-anywhere nickel-cadmium power from 6 to 30 volts, and up to 7.5 ampere-hours. Recharged by a built-in charger. And protected by an integral overload disconnect that automatically resets when

normal conditions are restored. For even greater maneuverability, there's an optional 6-foot coiled power cable that retracts to a mere 11". And to shed more light on your subject, we have a belt/light combination providing 150-250-350 watts.

When you add up all its advantages, and factor in the thousands of newsreels, documentaries and features that have been made with our Power Belt, there's little wonder why Cine 60's the standard motion picture supply throughout the world.

Whatever turns *you* on, let us show you how we can turn *it* on—accurately and reliably. Send for our spec sheet and price list, featuring the Power Belt and our other accessories.

Doing the Business of Creativity

An Effort At Helping Sponsors and Producers to Understand Each Other And Find a Viable Way of Work Together.

by ED SCHULTZ

Business Screen's Production Review issue a few months back made a strong editorial attack on some of the abuses arising out of the bidding for Federal government film assignments. Beware, for, if you haven't noticed, some of these abuses are leaking out of the government bureaus and spilling into executive suites.

Producers: have you participated in a competitive bid for a corporate image film recently only to discover after much labor, anxiety, and expense that you were pre-selected to be the second or third runner in a race that had already been won? Or perhaps you were the fortunate one in the winner's circle waiting for the official results to be announced?

How do you feel about being required as part of a competitive bid to provide a full film treatment or script—for free?

What do you think of sponsors who think they *may* want to do a film if you or one of several other producers can come up with a good reason why they should, and can show them some really exciting scripts (free, of course) from which they might choose—then they decide they can't afford a film?

Or, isn't it personally satisfying to learn that the result of a film bid you sweated over served a truly functional purpose—to prove to management that producing a film "outside" costs more than the same film produced in-plant?

And now a word for our sponsors:

How satisfying is it when the lowest bidder on your film project gets to the workprint stage and announces there isn't enough money to finish the film?

Or, how do you face the frustration of reading, three, six, or eleven full film treatments you asked producers to do on speculation and not one of them has a price tag you can afford—or an idea that suits your needs?

Or, how do you explain to your chain of command that the film made from what they thought were the best parts of several treatments submitted on spec by several producers has sent every test audience out of the theatre in yawns of ennui or gales of giggles?

Whether or not you consider these things abuses, they are symptomatic of a decline in the sponsor/producer relationship and therefore should be of concern to us all.

Competition has become keener and there are more filmmakers ready to make films than there are films ready to be made. The result is an open bazaar and, like any shopper in the market of Marrakech, the film buyer is at once exhilarated at the exotic variety and fearful of being cheated or being made a fool of. So, defensive procedures are called for. The competitive bid is one such defense mechanism. It is predicated on the assumption

that one is dealing with charlatans—or at least potential charlatans—and the wily fellows must be forced to make their approach at arms' length with sealed bids that can be examined carefully far from the befuddling bazaar. But the defense armor that protects the innocent also masks the guilt. The folklore of business is rich with tales of tacky transactions and double dealings taking place in the shadow of the "free and open market." Even dressed up with the respectful business-ese of "efficiency" and "free and open competition", it still all trundles down to mistrust with a touch of "getting-something-for-nothing" fantasy.

How then can producers and sponsors best protect themselves (and each other) from each other (and themselves)?

The best defense any buyer can have in any market is to know what he or she wants to buy. Otherwise you're

Ed Schultz is president of Cinemakers, Inc., a leading New York film production company.

How can producers and sponsors best protect themselves and each other) from each other (and themselves)?"

set-up for any fast-talking pitchman that happens along.

A film that will cost thousands of dollars to create, produce, and distribute is not exactly an impulse item and deserves some thought.

There is an excellent booklet called *RESPONSIBILITIES OF THE FILM PRODUCER AND SPONSOR**, prepared and published by the Association of National Advertisers, that has recently been revised. This booklet covers nearly every aspect of sponsored film production from "An Analysis of the Need for a Film" to "Maintenance of Prints" and just about everything in between. It spells out in some detail the reasonable performance of sponsor and producer during each phase of production and is **MUST** reading for any new sponsor or producer. It wouldn't hurt the experienced to go through it and check their recent performance against its guidelines.

The booklet points out the sponsor's initial responsibility to analyze the need for a film; to define its objectives; and determine its audience and content. This homework is easily done with the aid of the booklet and puts the sponsor in a far better position to evaluate a producer's suggestions and competence vis-a-vis the specific project. From the producer's point of view, a sponsor who knows what he or she needs, and why, makes it possible to focus attention immediately on solving specific problems instead of wasting time taking guesses at answers that only the sponsor can really know. Less exciting perhaps than having a bevy of producers telling you what to do and why, but, in fact, more efficient.

Defense Number Two is to sort out the reputable producers. Concrete suggestions for this procedure can also be found in the A.N.A. booklet. They boil down to screening the producer's work and checking into his or her reputation. I'll add: talking with him or her to see if the "vibes" are good and that the possibilities are for understanding one another.

With a firm grasp on the "why" and the "for whom" and a list of reputable producers in hand, we approach the starting gate of the competitive bid.

The revised edition will be available in the near future from the A.N.A., 155 E. 4th St., New York, N.Y. 10017, for \$5.00.

In theory the competitive bid is fair and reasonable when bidders are given precise specifications on which to bid. Only a storyboard or script provides sufficient specifications on which a film producer can make a definitive bid. But what happens when the bidder is not only asked to bid, but to provide the specifications? An unorthodox business procedure at least. It solves nothing, of course, since each bidder is selecting his or her own specifications which may or may not be similar to others. The resulting price bids can range all over the lot and the sponsor may not be able to evaluate the relative merits of each bid because the specifications aren't uniform.

This also raises the question of just how much a sponsor has a right to demand, and how much a producer should do on speculation. Every filmmaker—and experienced film buyer—knows that the most significant contribution a filmmaker can make to a sponsor's project is creating the concept, the filmic design that will make that film unique, compel attention, and move audiences to respond. Give it away free? We all know the estimated value of something given away free.

Yet, there is the sponsor standing at the finish line with a film to be produced if only three or four producers would be willing to run the competitive bid race. The qualifications are simple enough: excellent fiscal condition; honorable reputation; proven talent; willing to buy own sneakers and run blindfolded. The blindfold is necessary since it gives the sponsor the ultimate option of moving the finish line—or leaving quietly—if things aren't going well. Have no fear; in spite of the stacked odds, the odds are the track will be alive with producers, freshly sneakered and blindfolded, eager to run. Filmmakers want to make films. Unfortunately, blind competitive bidding is a race that nobody wins—not even the sponsor.

A producer whose bid was too high might have been able to create an excellent film on the budget available if he or she knew what it was. Choosing the lowest bidder and then making "improvements" in the script as it is developed almost always results in additional costs—frequently higher than the highest losing bid. And if none of the bids is "in the ballpark", as

they say, does one start all over again with another group of producers? Efficient?

Forget about money. What about bidding with ideas? Obviously, by definition, the majority of producers involved must lose—although some of their ideas may show up later in the "winner." The sponsor seems to be getting something for nothing—the best ideas of the most creative minds in the business. Maybe. Even assuming that the excitement of the race provokes the participants to do more than their usual best and the resulting film ideas are all very imaginative, are they producible for the price? Do they expose and explore the subject or merely illuminate it? Are the ideas geared to communicate effectively with the film's intended audience, or to impress the sponsor?

Personally, I feel that asking creative people to do any work on speculation is a poor way to work. At Cinemakers we don't ask cinematographers to shoot a few scenes of a film they *might* be hired to do. Nor do we ask artists to submit storyboards on speculation. For one thing, few will do it, and, for another, I'd wonder about the qualifications of those who would. We simply view the individual's previous work, check their references, and talk a little bit to see if our heads are in the same place. If it is a craftsman who works on a fee basis, we ask what it is. If it is an artist or animator whose fee depends upon the complexity of the job, we give as many specifics about the project as we can and ask for an estimate. Frequently we will tell the individual what we've budgeted for that aspect of the production and ask whether he or she can work within that figure.

That's the way I think sponsors should select producers and is, in fact, the way many sponsors do commission their films. It works, but it does require some understanding of film, confidence in one's judgment, decision-making ability, and the *authority* to make decisions. Qualities that are not always encouraged in carpeted corporate corridors.

If competitive bidding has to be the name of your game there are ways to play that are more productive (even ethical) than a dog-eat-dog free-for-all. Ask your list of pre-screened producers to prepare a proposal based upon your predetermined need for a film,

It's lightweight and slim... carry it like an attache case.

TRICOM...so versatile it goes and shows anywhere

The New Super 8 Sound-Motion Picture Projector From Jayark

TRICOM

WITH 3-WAY PLAY

Introducing the new Jayark TRICOM with 3-Way Play communications power...rear screen...front screen...still frame. It's a new concept in audio visual design, engineered for versatility to help you sell, train and teach more effectively anywhere...anytime.

Easy-To-Use

Just flip up the lid and the big 16" screen drops into position. Insert the automatic self-winding, color-sound cartridge (plays up to 30 minutes) and push the button. That's all. It's totally automatic...always reliable. Perfect for dynamic desk-top presentations. Sharp, brilliant pictures even in fully-lighted rooms. Excellent sound quality. Powered by a new, patented cartridge which prevents film damage and foul-ups.

Switch in seconds for front projection on a wall screen of any size... without distortion. Switch to still frame/stop action to emphasize key points... answer questions...or add a personal touch. Freeze any frame in either rear view or front projection use for as long as you like without film damage.

Easy-To-Carry

The new TRICOM is truly compact, lightweight and portable. Carry it like an attache case.

Economical long-term leasing plans are available, if you prefer. And don't worry about films. Our Associated Film Producers Network can develop custom-made films for every budget. Film costs can even be included in lease.

Try It... Test It

Wherever communication is important Jayark and TRICOM can help you do it better. Try TRICOM...test it. Just mail the coupon below for more information or a no obligation demonstration.

Yes, I'd like to see how the new TRICOM Super 8 projector can help me.

☐ Contact me for a no obligation demonstration.

☐ Send me additional information.

Business Screener

PRESENTS

1972's

MOST

HONORED

FILMS

In the next three pages, Business Screen has gathered together the films which have won awards at three or more major U.S. film festivals or contests during 1972.

Winning multiple awards is a good indication that a film not only appeals to one small group of jurors at one particular time, which can be said of some isolated single contest winners but can almost always be recognized as a film that will be consistently appealing to a wide variety of audiences.

Members of Business Screen's staff have seen most of these films during the year. They are of exceptionally high quality, perhaps the best group that we have ever listed in these annual compilations.

We salute these "Most Honored Films" and the people who have sponsored and produced them.

AGRICULTURE ON THE MOVE

Winner at CINE, IP, New York.

Sponsor-Distributor: Union Pacific Railroad Company

Production: Union Pacific Audio Visual Services

Producer-Editor: Ralph R. Burrell

Director: Gene Burson

Why is this man smiling?

What would you do if yours was the most popular professional camera line? So popular, you had to move out of your space? So fast-moving, that sheer demand forced you to relocate in the heart of New York? You'd smile. Knowing this is just the beginning. Knowing you'll soon be announcing other developments that will rock the motion picture industry. Or maybe you'd just stand on a corner, enjoying a good cigar.

eclair

We're moving. How about you?

15th Street, New York, 10036 (212) 869-0490, 7262 Melrose Avenue, Los Angeles, Ca. 90046 (213) 933-7182, Telex Number 14-7208

Industrial TV Groups Merge

The former National Industrial Television Association and the Industrial Television Society have officially joined together to become the International Industrial Television Association (IITA).

The IITA is a user group of specialists in business, industry, education, government and similar organizations devoted to the professional development and use of television and related techniques for communication, training, information, instruction, observation and documentation. The IITA welcomes as members individual users as well as manufacturers, vendors, consultants and students.

With members throughout the US, Canada, Europe and other international locations, the IITA is organized on a regional and local chapter basis. Prominent USA chapters operate in San Francisco, Boston, Dallas, New York City, Minneapolis, Chicago, Philadelphia, Buffalo and Tulsa.

Industrial Management Award to Caterpillar Air Pollution Film

"Something in the Air," a filmed analysis by Caterpillar Tractor Co., of the air pollution situation, has received a First Place Award in the 1972 Ralph M. Landes Film Competition by the Industrial Management Society.

Producer Donald G. Peterson, right, received the award for Caterpillar from Mr. Landes at the I.M.S. Engineering and Management Clinic recently held in Chicago.

The film asks whether mankind must learn to live with air pollution; what's being done; and does America have to sacrifice jobs and cripple the

convenience and mobility that we have come to take for granted?

"Something in the Air" discusses pollution from international combustion engines and explores the viewpoints of government officials, manufacturing spokesmen and scientists concerning the problem and possible solutions.

George W. Colburn Dies

George W. Colburn, founder and Chairman of the Board of the George W. Colburn Laboratory, died on January 12th in Chicago.

Mr. Colburn had been a leader in the motion picture industry for more than 35 years. His inventive genius made possible many innovations in both printing and processing techniques that have benefitted the entire industry.

He was a Fellow of the Society of Motion Picture and Television Engineers and has served as Governor, Treasurer, and Conference Vice-President for the Society. He was also a founder and past President of the Association of Cinema Laboratories.

Eclair Opens New Headquarters in New York

Eclair Corporation of America has moved to new offices at 62 West 45th Street, New York 10036.

According to Leo Lukowsky, Executive Vice President, the new offices, triple in size to previous quarters in Valley Stream, N.Y., will make it "easier than ever for us to provide equipment, technical assistance and even faster service to the industry."

Eclair also has West Coast offices in Los Angeles and a franchised dealer network.

Short Takes

The 15th Annual American Film Festival, said to be the largest non-theatrical film festival in the world, has received a record 732 entries for its 1973 competition.

Dymat Motion Picture Labs is a new name for the former Hollywood Valley Film Labs.

MCA Inc. is carrying its Disco-Vision demonstration to several major cities throughout the U.S. this spring. The MCA Disco-Vision system transmits pictures and sound from a disc player to TV set monitors.

Association-Sterling Films has announced that its theatre-distribution library of free films was booked 100% solid during the Christmas-New Year's holiday season. Top drawing card is "Puerto Rico—Island Beauty," which, in three months, has garnered 1,500 theatre playdates, reach over three million moviegoers.

A new survey by the American Film Institute has revealed that 613 American colleges and universities are now offering 5,889 courses on film and television. 194 of the colleges offer degrees with majors in film and television. A total of 22,406 students are enrolled in the courses of the 13 schools with major programs in the two arts.

G. Carleton Hunt, left, retiring Chairman of the Board of DeLuxe General, Inc., has been honored with

a commemorative plaque from Wilt Holm, right, President of The Society of Motion Picture and Television Engineers for "his initiative, dedication and leadership in the SMPTE and the motion picture industry."

What the Viewlex SuperViewers did for others...

A midwest electronics manufacturer needed a filmstrip viewer to enable employees to learn new job skills individually at their own learning rate. The viewing screen had to be large and the image bright enough to be clearly seen in normal light. And their budget was tight.

One company needed a sight and sound Super 8 motion picture viewer for dramatic product presentations in their coast-to-coast showrooms. A viewer that could be programmed to automatically stop at predetermined points, and at the program's end. And also provide the flexibility of starting and stopping manually.

Employee instruction and response testing for gauging program effectiveness was the prime requirement for this northeastern government agency. They needed a one-to-one programmed response capability from an automatic sound filmstrip viewer—with response time controlled by the trainee.

A heavy machinery manufacturer needed color motion pictures to clearly demonstrate the advantages of his equipment, in actual use situations, to sales prospects as well as at engineering seminars. For budgetary reasons they wanted to utilize the low cost Super 8 film format.

FEATURING NEW EQUIPMENT AND SERVICES

Camera Accessories

ARRIFLEX COMPANY OF AMERICA has introduced a new ultra-compact Duro-Pac battery for use with all 16S models. Can be mounted on accessory shoe or matte box beam. Eliminates need

for shoulder-pack or belts on most assignments. Will run 1000 ft. at 68° in 100 ft. daylight spools, or two 400 ft. magazines before charging is necessary. 25-20 Brooklyn-Queens Expressway West, Woodside, N.Y. 11377.

ECLAIR CORPORATION OF AMERICA has been named exclusive U.S. distributor for the UNIVO Perfectone Crystal Sync Motor. UNIVO mates with Eclair NPR models, provides pilot tone

outputs of 60 or 50 Hz for 24 and 25 fps. Also permits 8 to 40 fps by calibrated control. Has automatic stop with reflex mirror in viewing position, auto clapperlight, built-in tripod base. 62 W. 45th St., New York, N.Y. 10036.

ANGENIEUX CORPORATION OF AMERICA has introduced a friction block device to eliminate "creeping" of Angenieux zoom lenses when the crank

handle has been removed. Block fits on the lens in place of crank handle and

allows zooming without interference from crank handle. 440 Merrick Rd., Oceanside, N.Y. 11572.

Filmstrip Projector

DUKANE CORP. has announced a new Micromatic Model 14A650C automatic sound filmstrip projector featuring solid state circuitry. 500 watt quartz halogen lamp and 3" f2.5 lens are standard. 2900 DuKane Drive, St. Charles, Ill. 60174.

Lighting Equipment

BERKEY COLORTAN, INC. has a new Mini Soft-Lite weighing 8¼ lbs. and designed for two 500, 750, or 1000

watt long-life lamps. Lamps are individually switched, with non-overlap area coverage. 1015 Chestnut St., Burbank, Ca. 91502.

CENTURY STRAND, INC. has developed new Cinemar color and color correction filters for effective control of Kelvin temperature and intensity. On a high temperature mylar base, the materials may be used with new high intensity quartz lights. Twenty colors. Outlast gelatine 20 to 1. 4 ft. and 25 ft. rolls. 3411 W. El Segundo Blvd., Hawthorne, Ca. 90250.

Programming Equipment

MONTAGE PRODUCTIONS has introduced the Media/Matic, a unique optical programmer capable of operating up to nine audio-visual devices. One Carousel projector with its manual control or standard change system controls the programming through photocells picking up light shining through holes in pre-punched plastic slides. Changes in any

sequence can be made by simply changing a slide. Plastic slides are available at 6¢ each. Controls slide projectors and through a relay, motion picture projectors, lights, tape recorders, etc. \$400 list. 9 Industrial Drive, Rutherford, N.J. 07070.

Storage Equipment

NEUMADE PRODUCTS CORP. has announced new decorator colors as finishes for its entire line of storage and retrieval products. Five colors are now available, as well as seven "Fiesta" colors which can be used on doors and drawers to create two-tone effects. 750 White Plains Rd., Scarsdale, N.Y. 10583.

Cassette Duplicator

3 M WOLLENSAK is offering a new compact cassette duplicator, Model 2770, which makes two copies from a single

master at 16 times original speed. Automatic rewind. Senses faulty cassettes. Suggested list is \$995. P.O. Box 33600, St. Paul, Minn. 55133.

Super 8mm Projector

JAYARK INSTRUMENT CORP. has introduced a new TRICOM Super 8 sound projector with 3-way projection options

front screen, rear screen and still frame. Built-in screen is 16" diameter. Self-winding 30-minute cartridge. Contains in attache-style case. 420 Madison Ave., New York, N.Y. 10017.

Helicopter Service

RONSON HELICOPTERS, INC. is now leasing helicopters complete with Tyler vibration-isolated camera systems. Ten Tyler and Arri-mount equipped helicopters are based at Trenton, N.J. and available anywhere in the Northeast. A base is also maintained at Newark Airport. Box 1386, Mercer County Airport, Trenton, N.J. (212) 431-3930.

Glen Glenn Sound Co.

video tape

filmstrips & slides

think **CFI**

We offer every post-production service that a customer may require . . . *laboratory services . . . title & optical services for both film and video tape . . . film strip and slide service . . . video tape to film transfers . . . video tape duplication . . . video cassette duplication . . . on-line and off-line CMX computerized editing facilities . . . the modern and complex sound facilities of the famed Glen Glenn sound organization.*

This is backed up by continuous research and development that has

won for CFI more academy technical awards than any other laboratory in the world. Add to this the many advantages that come from having all these various facilities concentrated at one location, and you can see that CFI truly offers "state of the art" quality.

Perhaps the single factor that has contributed most to our growth and expansion over the past half-century has been our sense of direction and involvement with our industry—our philosophy. It is that every job we

process is important—that every job we do for our clients, whether it is big or small, deserves and receives the personal attention of a large, professional and dedicated staff backed by the finest technical resources available.

At CFI you can rest assured that your work will receive the highest level of professional attention. And that we have the *total capabilities* to do whatever is necessary to make the results turn out right.

paradox *continued*

Metroliner and usually take it to Philadelphia, where I have a couple of marvellous clients, Russ Case and John Meader of Aitken-Kynett, and also to Baltimore, where I meet and work with Bob Fenwick and his terrific team at Social Security Administration. But any kind of travel, even pleasant travel, is just a lot of overhead for a writer. And obviously, some of the worst overhead of all is the time I spend standing in stand-by queues, circling in fog over airports, running from one end of O'Hare to the other carrying two heavy bags, and waiting interminably for room

service breakfast at the Century Plaza. I won't even mention things like looking at answer prints with the sound track backwards and bad color timing or arguing with a transfer house about sending me another "B-wind" when the written order says that we need two "A-winds" for the internegative.

But even when a friendly client or producer agrees with a writer that all of this is overhead . . . he cannot seem to grasp, that for a writer . . . *research* is also overhead. They feel that the writer should do the research on his own time, and not list it separately or invoice it or allow it in his total pricing structure. When I first started in this business this was a

terrible trauma for me. By now it is much less of a problem, just because over the years I have acquired a lot of information which I can dredge out of the little Rolodex in my head, or CMU for short. I have been fortunate also with research because I'm married to a librarian, who is professionally trained, and who has instant access to many reference sources the average individual must seek out for himself.

But experience has been the biggest factor. I no longer have to make a note of it and go look it up later when interviewing a doctor who refers to a B.U.N., an engineer to a Rockwell, a physicist to a gas chromatograph, a systems analyst to T.S.O., an educator to tracking, an architect to soffits, an artist to friskets, or a media analyst to the demographics of barter spot. Not only that, but the whole technology of research interviews has become such second nature with me by now that I can get as much relevant information from a thirty minute interview today as I used to get from four hours of questioning. Since I can't get people to pay for research, at least I can now reduce the overhead from 240 minutes to 30 minutes, so I can get back to my productive work . . . writing . . . three hours and thirty minutes earlier.

I am amused by some of the articles I have read lately in our industry press, in which various producers and creative types make eloquent pleas for more research, better research, and more time spent in preparing for the job before starting the writing process. Invariably, I have noted, these are the very same plea-bargainers who refuse to pay for *any* research, and who expect the writer to assume all the costs as part of the normal educative process which accompanies the script-writing function. All I can say, Readers, is that in my view, research has absolutely nothing to do with creativity in general, with scriptwriting in particular, and with greatness on the screen at all.

Research is nothing more or less than overhead . . . exactly the same as rent and typing services and showing up at interlocks to handle client objections. And if someone requires unusually expensive research . . . then he ought to pay for it the way he expects to pay for unusually expensive office space or interior decor or shooting in 35 instead of 16.

Like any other overhead, research can be very sneaky. It can creep up on you like the foggy miasma of Erewhon until it consumes you in the very same way . . . underhandedly . . . destroying the creativity of which you are capable. □

"HOLD IT"

freeze action!

**NOW! Available in all FAIRCHILD
Super 8mm sound film projectors**

Whether you're selling a product or service or perhaps training an individual or an entire team, Fairchild projectors equipped with the freeze action option offer the most dependable stop motion available in the super 8mm field. Freeze action instantly stops your film on any frame you choose without fear of film damage. Hold the frozen frame for as long as needed then resume normal film speed and sound. Unbelievably accurate.

Successfully tested by Fairchild engineers and successfully used by both industry and government, Fairchild projectors with freeze action bring another dimension to audiovisual selling and training.

With Fairchild expertise and experience at both the designing and manufacturing levels, you can be sure of an efficient and effective presentation of your program.

Contact the franchised Fairchild dealer in your area. We have a network of service/sales dealers second to no one in the AV field.

Doing Business

Continued

purpose, audience, and desired content (following the A.N.A. guidelines) and the budget range or limit you have in mind. Reputable producers will do their best to come as far under that upper figure as possible or will commend as imaginative a film as can be done for the upper figure. Either way you have realistic alternatives to choose. If you *really* have no idea how much you want to spend, you are willing to be flexible because you're more interested in ideas than dollars, say so and be prepared for the wild bids. Give each producer efficient time to consider the problems—a month is not too long, especially if the problems are ones you've been trying to solve for years—and be available to answer questions or to supply additional information.

The proposals you receive may not be elaborate but should contain recommendations for the film's length; brief one or two page outline of how the film is to be structured and what the producer sees as its general tone and "feel"; and an estimated production cost range. Don't expect to see a full screen treatment or storyboard describing all the action and dialogue in a speculative proposal.

If you are not prepared to make a final commitment to a particular producer on the basis of the initial proposal, enter into a Research/Creation Agreement which commits the producer(s) to doing detailed research on your subject and to preparing a full film treatment, storyboard, or even shooting script, plus a firm quote on the production of the described film. The fee paid to the producer under the Research/Creation Agreement can range anywhere from 5% to 10% of the estimated overall budget or be a flat fee. Either way it is deductible from the film's production price.

Making an effective sponsored film is a volatile blend of art, science, and business and the relationship between sponsor and producer must be one of mutual understanding, trust, and respect. Misunderstandings of fact, petty conflicts about how something is said or done, ego-centered demands to include or exclude one thing or another, show up in the final film and affect its effectiveness—mostly negatively.

The manner in which a producer is commissioned establishes the atmosphere in which the film will be created and produced. It has to be one of mutual respect and confidence if we are to avoid making asses of ourselves and poor films to boot. □

Now...

Capital Film offers two Full Service Laboratories...

● in Washington, D.C.

● in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services —RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

Training the New Wave of Film Makers

From among the 301 colleges and universities offering film making courses, none enjoys the unique position held by Rochester, New York, Institute of Technology. Since RIT is one of the foremost colleges in photography, students who enter the Film Making/TV courses have had at least two years of photography in either professional, industrial, portrait, advertising or illustration.

Whether this is an asset or not toward knowledgeable students is what we asked Professor Reid Ray, co-ordinator of the Department. Professor Ray, veteran film producer of 40 years, and now head of the motion picture and television courses being taught at RIT, was careful in his answer.

"About half of the students make the transition quite well from 'still' photography to 'cinematography.' Others require a rather strictly supervised 'refresher' in lighting for motion pictures, and the idea of the subjects 'moving' in relation to composition. I am quick to say that this in no way reflects on their earlier instruction, but the moving image sometimes confuses the young person. They know the ASA of the emulsion, but the shutter speed can no longer assist their exposure. Likewise, there is some reluctance toward back-lighting, which is so important in film making, and television. But we soon take care of that with studio demonstrations," Professor Ray said.

Aided by the efforts of Dr. Lothar K. Engelmann and Professor William S. Shoemaker, Dean and Director (respectively) of RIT's College of Graphic Arts and Photography, and the School of Photographic Arts and

Sciences, the Film Making/TV Department (formerly the Motion Picture Section) has increased its enrollment by 90 percent in the last three years. The increase in student enrollment has taken place since the college moved from downtown Rochester to its new four-year old \$90 million campus in Henrietta, six miles south of Rochester.

Professor Ray said that considerable new equipment has been added to the department in the motion picture field which has been made possible with the assistance of grants, and the acquisition of equipment from industry.

"These donated items consist of dolly, a crane, a microphone peramulator, printing and processing equipment and an animation stand. Purchases have added new editing facilities, recording equipment in both mixing and recording, and a television installation which includes an addition of a second studio for our television course, one of the new courses added this Fall. The grant we received made possible the purchase of the TV equipment, which was needed to amplify a new Biomedical Communication course, part of which is taught by our Film Making/TV Department," Professor Ray said.

A staff of five and a graduate assistant in the department instructs classes daily in Film Making I, Film Making II, Motion Picture Workshop, Biomedical Film Making, an Art and Design Film course, Introduction to Television Production, and History and Aesthetics of Film. There is also a program leading to a Masters of Fine Arts in Photography, with a major or minor in Film Making. Summer sessions include four of the above in abbreviated form. □

No other lab in
the world knows as
much about filmstrips &
color slide duplicates
as HOLMES!

...because it's OUR World!

Since 1948 we've specialized in processing filmstrips and color slide duplicates. They're not a "side line" with us. They're our only business. During these 24 years, we've created our own unique equipment and developed many unusual techniques. Most important of all, we've instilled in every department an outstanding enthusiasm for perfection. That's why we say: "No matter what your material is, we can do more with it — and get more out of it — than anyone else." It's a promise... from the only lab that knows and cares enough.

picture parade

continued

were distributed to every branch of the Company and the balance to Modern Talking Picture Service, Department of External Affairs, Department of Industry, Trade & Commerce, and some special outlets.

The audience already exceeds 3,800,000 and the film is still in constant use within the Company and being progressively shown to outside audiences.

While the major showings have been in Canada, the film has been viewed in many important centres in the United Kingdom, Europe and other countries. For instance, it has been screened at Gothenburg, Aarhus, Lake Como, Hamburg, Bremen, Düsseldorf, Paris, Munich, Frankfurt, Stuttgart, Antwerp, Glasgow, Birmingham, Leicester, London, Lisbon, Rome, Santiago, Buenos Aires, Athens, Madrid, Tel Aviv, Mexico, Tokyo, Honolulu, Rio de Janeiro, Malaysia, Tanganyika, Sydney, Brisbane, and it is now at Man And His World.

It was shown daily in January by the BBC in London, and is still being seen on the BBC who use it as the test pattern!

It shows a cross-section of modern transportation and resource development techniques in Canada. The film has been well received by audiences throughout the world, and has provided both employees and the general public with a better understanding of the role of transportation in the highly competitive and expanding world economy.

AMF "Easyscore" Introduced Via "Watch-and-Touch" Film

When you feel you have one of the biggest product innovations to hit your industry in at least a decade, your introductory sales presentation ought to be on something of the same order.

AMF "Easyscore" Presentation to bowling proprietors.

In the recent introduction of "Easyscore" automatic scoring machine, AMF's Bowling Products Division attempt just a presentation. With the counsel and assistance of Audio Image, Inc., a New York-based audiovisual communications firm, AMF built a ten-part spectacular to im-

ce "Easyscore"—first to its 60-man
es staff and then to bowling pro-
prietors and representatives of bowler
organizations across the country.

The hour-long presentation made
of some 600 slides, twenty minutes
16 mm color film, as original
soundtrack and narration by CBS
sportscaster Pat Summerall. The cli-
max of the presentation was a nine-
minute segment with a specially-shot
motion picture of a match game be-
tween two professional bowlers inte-
grated into a "live" demonstration of
"Easyscore" model. After each
roll (bowling, that is) the film was
stopped and members of the audience
were invited to "Easyscore" the frame.
The just-concluded five-week in-
ductory campaign used four sets of
presentation equipment and two teams
of AMF spokesmen to reach bowling
proprietors and bowlers in 24 cities.

Look at Long Island

L.I.U.S.A. takes a look at the many
faces of the nation's largest suburb
known as Long Island, a uniquely self-
contained microcosm of America hous-
ing over 2.6 million people.

Through the pages of Newsday, the
great suburban daily paper in the
S., and the words of its editors and
reporters the film focuses on life in
suburbia with its problems of pollu-
tion, planning, housing, health care,

education and transportation.

Director-Cameraman Ralph Wei-
singer of Avon Productions spent a
year filming *L.I.U.S.A.*, a film that
takes its audience from the big city
skyline to the woods, farmland, water-
fronts, peaceful meadows, teeming
parking lots, quiet beaches, congested
highways and the cookie cutter housing
developments of suburbia. The camera
captures the color and excitement of
country fairs, band festivals, firemen
tournaments, auto racing, ballooning,
surfing, and at the same time spotlights
the decisions 50.2% of the nation's
population must make to preserve the
style of living they now enjoy.

New Sponsored Films:

Kodak Canada, Ltd., has released
a new motion picture, "Picture Can-
ada", depicting the moods and activi-
ties, places and people of Canada.
The film's objective is to stimulate a
greater awareness and desire among
Canadians to explore their own coun-
try. It was produced by **Crawley Films,
Ltd.**

Two new films on sterling silver de-
sign and manufacture, "The Fine Art
of Sterling Design" and "Your Sterling
Heritage" have been sponsored by
Reed and Barton Silversmiths for dis-
tribution by Modern Talking Picture
Service.

The American Academy of Family Physicians has launched an audio visual program on video cassette use by its 32,000 member physicians. Production by Synapse Communications Services. Production cost will be shared by companies operating in the health care field.

A new filmstrip on insurance and mutual funds is being used by Safeco Insurance, of Seattle. Production by The Film Works, San Francisco.

Noise pollution is the subject of a new film, "To Conserve and Protect," sponsored by Beltone Electronics Co. Narrator James Mason says that unchecked, noise pollution will rob us of our ability to hear. Modern Talking Picture Service distributes to school and adult groups, television.

A series of light-hearted sales films has been made for Armour-Dial Canyon Films, Phoenix.

The U.S. Navy's Office of Information is distributing a series of public service spots to television stations.

about the men serving in the Navy. Joe Dunford directed for Pelican Films.

Community Health Service, HSM, shows systematized methods of getting the benefits of modern medical science to millions of Americans who presently denied them in "Where Hurts", a new film produced by Joe Copeland Productions and distributed by Modern Talking Picture Service.

Responsibilities of parents in child guidance is the subject of "The First Years Together . . . To Being a Child," produced by Medion, Inc. for the U.S. Department of Health, Education and Welfare. Distribution to schools, community groups and is by Modern Talking Picture Service.

Butterfly Films, Cincinnati, has completed a series of 13 television video cassette programs for a Johnson & Johnson company, Drustar Unit D Systems. The video-cassettes were made for educational programming in nursing homes, extended care centers and pharmacies. Final production completed at Tele-Color Productions in Washington.

New Syndicated Films:

A film prepared for food service, health and sanitation personnel shows how flies breed and how they transmit germs and disease. "Flies, Filth and Food" was produced and is distributed by **Continental Film Productions, Chattanooga**.

What is reputed to be the "sexiest training film ever made" is now available from **Roundtable Films, Inc.**, Beverly Hills, Ca. "I'll Buy That" uses a realistic example of getting a date

with a star to make its psychologically sound points about customer needs, recall research, timing and closing sale.

GENA Films, Rockville, Md., is now offering a Loss Prevention Package for organizations whose employees handle cash. Included in the package are three films originally produced by the American Bankers Association: "Checks: What to Cash", "Checks: When to Cash", and "Holdup: What to Do."

"In Living Color" asks if you are comfortable with a black, or a Spaniard, American, and, even more important, "is he comfortable with you?"

Datafilms (Los Angeles) release an unusually candid expression of the inner feelings of two minority individuals—"feelings for which whites should, in the interest of a more harmonious society, develop an increased awareness and sensitivity."

Sensory Learning Corp., San Carlos, Ca., has released a new vocational film on the banking industry. Entitled "Step Right In", the film is designed to overcome a new employee's first day fears by showing that banking is really a friendly business conducted in a cordial atmosphere.

"Letter Writing at Work" is a new minute color film available from **Roundtable Films**, Beverly Hills, Ca. It is intended to help clerks, supervisors, managers and others prepare letters in their work.

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it. Why settle for less than the best? Call Reela now.

REELA OFFERS:

Complete editorial services • complete producer's services — animation — titling — sound • complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming • Super 8 printing and cartridging.

SLIDE SYNC CASSETTE RECORDER

Combine a Telex Slide Sync Cassette Recorder with a remote controlled slide projector and create your own tape slide presentations. Record both the audio program and sync pulses advance or stop separately or simultaneously and you're ready to present, instruct or train with a synchronized audio visual program. Effective with one person or one hundred and easy to produce, erase, play and repeat program segments.

That's right, REPEAT. A single Review button adds the unique capability to instantly repeat any portion of the program maintaining perfect tape and slide synchronization. It's great for emphasizing, studying, training, drilling, or testing. Other functions provide complete control for tape and slide projector including remote focus, slide advance reverse, tape start/stop, instant pause, tone and volume controls, tape fast forward reverse and end-of-tape sensing.

With the Telex Slide Sync Cassette Recorder you can record both audio and sync channels, add the sync track to a pre-recorded cassette or use the unit as a standard monaural recorder player. You can monitor while recording and add narration through a built-in P.A. system to supplement the program without recording. All this combined with heavy-duty industrial design make this unit the most versatile slide sync cassette unit ever! Also available as a player only. Made in the U.S.A. and warranted for a full year.

The Mod Couple LUXOR Media Libraries

The LEADER Series is available in the same contemporary colors as the larger UNLIMITED Libraries to enhance your Media Center with a bright, inviting look.

These lively colors combined with LUXOR'S exclusive, padded drawer interiors give you the ability to meet today's audiovisual materials filing and storage requirements. And the LUXOR lock-stacking design permits you to add-on to meet next year's needs.

For further flexibility two LEADER units may be stacked side-by-side atop UNLIMITED models.

Let us show you how the LEADER and UNLIMITED Libraries can help you. Send today for:

Free 48-page catalog sent with details on 400 LUXOR products.

LUXOR filing and storage Libraries for Filmstrips, Sound Filmstrips, Records, Tapes, Cassettes, Transparencies, Slides, Study Prints, 16mm & 8mm Films, Film Loops, Microfilm, Microfiche, Video Tapes and AV Equipment. LUXOR mobile projector bases and storage systems, transparency-making materials, AV forms and materials and other LUXOR products.

HARCOURT BRACE JOVANOVICH PUBLICATION

20 million viewers for \$1600

Yes, 8¢ a thousand.

Actual circulation figures from our files.

You can match them, with a "press release on film." A minute less of 16mm-sound footage, plus printed script, that you give away selected stations.

Important: Hire Modern to send your clips to the stations. We know the right people, the right stations. They know us, and recognize that our distinctive package contains quality material. Result: High acceptance rate. We send you a report on which stations used your film and how many people saw it.

We used to call this service Modern TV Newsfilm, but we've renamed it Modern TV Spots. Reason: We've found a much wider opportunity for you. A news angle is fine, but stations will use seasonal material, public service announcements, fillers of many types. Our experience — and surveys — show that they welcome clips on environment, business (this gets a high rating, in fact), women, youth, sports, other subjects.

What else do you need to know? Ask Modern

An engineer's camera.

You don't have to be an engineer to understand the basic engineering concepts behind the ACL." The speaker is Eric Falkenberg, Technical Executive, Eclair Corporation of America.

Take simplicity. More than any single principle, it defines the design philosophy of the Eclair ACL.

Absolute minimum of parts in ACL magazine provides silent, blimpless operation, even when microphone is placed close to camera.

From your first impression of the camera, you understand, almost instinctively, simpler design means a more compact design. Lighter weight. Faster shooting.

Front and rear of ACL aperture plate, with entire camera movement. Extreme simplicity provides maximum efficiency, quiet and reliability.

wear, fewer parts to cause trouble.

"In theory, a simpler design means less noise. Fewer parts mean fewer noise sources. Using modern noise-suppressing materials and techniques, ACL has bridged the gap between theory and practice! Simplicity even affects power consumption. With a film path that produces less friction—requiring less power to drive a length of film.

"There are many more advantages ACL's simplicity provides. But the best way to evaluate them is to try one. Then, you'll simply sell yourself!"

Crystal-controlled Hall-effect brushless motor requires only 0.8 amperes.

For the name of your nearest Eclair dealer, or a copy of our fact-filled brochure, write or call Eclair Corporation of America, 62 West 45th Street, New York 10036 (212) 869-0490 or 7262 Melrose Avenue, Los Angeles, California 90046 (213) 933-7182.

But that's just the start. Inside the ACL

eclair corporation of america

A cameraman's camera.

Selected Short Subject

This summer in major metro market theaters the "added attraction" will be *Theater Cavalcade No. 8*, a fully-sponsored news featurette. This issue will play long-run engagements with such box-office blockbusters as "Tom Sawyer," "Lost Horizon," "Day of the Jackal," "Sleuth," "Slither" and encore releases of "The Sound of Music" and "Mary Poppins." *Theater Cavalcade* is a communications concept for sponsors who want to reach the "dominant influence on consumer markets for the next decade and a half". Cost? Would you believe, less than \$1.40 per big screen showing, including editing, scripting, narration, titles, 35mm color prints and distribution! Best yet, we can work with film on hand. If you've got the footage, we've got the format: *Theater Cavalcade*. Clip the coupon below for full facts and a demo.

the fast picture show,

Flip-up screen.

For showing across the desk. To show across the room, flip down and project on any wall screen. (With a Kodak Ektahite projection screen, you can leave the lights on.)

Prices.

The playback model costs less than \$460, or \$490 with zoom lens. The playback-and-record model is less than \$580, also with zoom lens.

Magic mirror.

To raise or lower the image, raise or lower the mirror. Not the projector. It sits solid, keeps a low profile.

Instant playback.

Reverse the film on any frame, play back any sequence you like. Flip the lever and freeze-frame anywhere. There's also automatic threading, automatic rewind. All with this single control lever.

Crisp, clear sound.

Magnetic sound from a 5-watt amplifier, with jack for earphones or external speakers.

Cassette loading.

Accepts silent or standard magnetic sound super 8 film in one of four Kodak Supermatic cassettes. You can load them yourself, if you wish. Up to 29 minutes of playing time. Set up and show within 30 seconds.

Take it anywhere.

You can plug into 110 volt, 60 Hz. (Weights just 30 pounds.) Use it to pitch, train, preview, introduce, entertain, storyboard, or sell. With color, action, and sound.

If you'd like more details about Kodak Supermatic sound projectors, call the dealer who carries Kodak professional audiovisual products. He's listed in the Yellow Pages under "Audiovisual Equipment and Supplies." Or send us the coupon.

for "state of the art" videotape services

think CFI

Better, more creative and effective work has always been the goal of our industry. It is our goal too. Our videotape facilities are the most complete and advanced in the world. We are constantly updating our techniques to incorporate the many revolutionary changes being made in electronics, editing systems, transfer systems and related fields.

Duplication—the only two-inch quad, broadcast quality, high-speed duplicator in Hollywood, along with one-inch, and half-inch formats, plus our added capability of the U-Matic videocassette duplication system for state-of-the-art quality.

Syndication—a completely staffed videotape syndication department for scheduling and shipping program tapes to television stations throughout the United States—on time and with complete information as to program length, commercial breaks and post-airing shipment. All returned tapes are checked for physical damage and broadcast quality, then cleaned and redubbed before recycling.

Editing Facilities—CMX "on-line" and "off-line" computerized editing... allowing editors, now unhampered by mechanical tasks, the opportunity to concentrate solely on creative functions with single frame picture and sound control—instantly.

Film and videotape transfers—film to tape transfers from 35mm, 16mm, or Super 8mm film, transparencies, or art work are accomplished on a Norelco or Fernseh film chain equipped with programmed color correction and image enhancing devices. Specially designed film recorders and 35mm and 16mm cameras are used to transfer to film from a videotape master for producers who record their material on videotape and wish to distribute on film.

In addition to complete videotape capabilities CFI also offers complete service in motion picture film processing, titles and opticals, filmstrips, slide duplication, and sound (at Glen Glenn Sound Company).

Glamour Theatre

More and more girls are proving their talents as business women.

Fairchild's newest super 8mm sound film projector, model 70-27, has this successful lady in mind.

Extremely compact, fashion designed, and encased in ginger gold this stylish rear screen projector can be shown to the board of directors in their conference room and then quickly ushered over to the engineers laboratory and then to the sales promotion manager's desk for his evaluation of your program.

Truly for the lady on the go, this Glamour Theatre is a fitting companion to the world's most successful rear screen portable projector, the Fairchild 70-07 agent model.

Contact Fairchild or your nearest authorized Fairchild dealer for complete details. And remember, Fairchild has a network of service dealers second to none in the AV industry.

Pepsi-Cola Bottlers Standardize on Video Cassettes

A major innovation in communications within the Pepsi-Cola Company is now taking place. It will revolutionize bottler in-plant training practices and dramatically expedite information exchanges between parent company and bottlers.

The new training and communications systems has been devised by the Pepsi-Cola Management Institute over the past two years and will begin with a series of 22 new training tapes for bottler personnel training which will be displayed on standard TV sets from signals provided by Sony U-Matic video cassette players installed at a great majority of Pepsi bottling plants.

Pepsi-Cola chose TV training because, according to PCMI Executive Director, Charles Thomas, "it is the 'now' medium, and we're convinced that in the universally familiar and accepted environment of TV the learning-teaching process in the critical area of bottler training can be strikingly effective.

"There is no doubt," Thomas says, "that a near crisis in manpower efficiency has afflicted us for some time, and there's also no doubt that the crisis is deepening at an alarming rate. PCMI's Educational Network is intended to halt, and reverse, this trend."

Behind the present situation lies a dilemma which more and more bottlers have come to recognize, and about which many have voiced concern. The dilemma is simply that in many areas the level of competence in the available labor market has been declining, while the index of desired achievement has been rising sharply, precipitated by the increasing complexities of conducting a successful business in a fiercely competitive marketplace. To close this gap, Charles Thomas feels, new and effective training and development methods are obviously called for.

Pepsi-Cola has been providing training materials to bottlers for over 20 years. While the basic principles have changed little the tools have changed greatly over the years from purely the printed word to more sophisticated audio-visual media. Two years ago, PCMI began to explore and reassess the complicated, often confusing, world of available facilities and services in the communications field. After

considering some two dozen proposals from various producers of training media, Teletape RealTime Communications, of New York, was selected to put together the training and development "package" that is now in full production. In fact, the first four elements of the program are already in the field. Teletape was chosen, according to Wallace Henry, PCMI Director of Communications, because they offered the effective combination of creative services (including a broad knowledge of the soft-drink industry) and the technical capability involved in production not only of the video tapes but of many peripheral materials used in the program.

The creative aspects of the program were of particular importance, and deserved the service of the best professional assistance available. "We recognized," Wallace Henry says, "that there are many highly skilled, efficient people in the ranks of bottler personnel—especially at the middle management level—who might be thought of as teachers. Unfortunately, while many of these people can *perform* very well, they may not be able to *teach*. That's why the professional touch is needed."

Working with writer Bob Ford, the PCMI executive staff has devised a

library of video cassettes that relate to such sales department subjects as "Merchandising and Display for Home-Market Packages" and "Preparing and Making Sales Presentations". Other elements will be concerned with production, such as "Product Quality" or "Microbiological Testing".

Charles Thomas believes that teaching with TV places the learner in a situation that is informal, emotionally comfortable, and familiar—particularly in view of the fact that a trainee has probably spent more hours of his life before a TV set than in a classroom. When feasible from the bottler's point of view, the learner can be placed in a "one-on-one" relationship with the TV set. That is, he can adjust the speed of a learning session by push-button playback to repeat material. Since the TV set operates in a lighted room, the learner can handle workbooks or take notes with no difficulty.

An essential philosophy built into this system is reassurance, and encouragement of the learners—in fact, almost to make learning fun. Each cassette contains control elements that check on the trainees comprehension of the material. At intervals, he is asked a question by the TV monitor, and is required to answer in a workbook, or by other techniques being developed. If his answer is wrong, he is never rebuked, but given immediate and considerate guidance to the

right answer. This sensitivity to the feelings of the learner, it is believed, can do much to bolster his self-image, and eradicate the discomfort which he may bring to a learning situation.

A pause button has been added as a modification to all U-Matic players to facilitate the one-on-one teaching techniques.

To implement the new program, which is paid for by bottlers (340 bottlers are participants) the Pepsi-Cola Management Institute has prepared an Action Plan booklet which describes the best ways to introduce the program to employees, designs for physical layouts of simple study carrels which can be locally built, and which are adjustable for use by individuals or by groups, and follow-up plans to insure that elements in the program are immediately put to use on the job.

PCMI Program Directors see a strong potential use for the internal TV communications medium. There is a tremendous need for material to assist in the in-plant implementation of the concepts and techniques reviewed in PCMI seminars, and it is believed that the video cassette units can fulfill this need.

Teletape's professional broadcast television crew photographing the PCMI spokesman, as he speaks to the route salesman. All original photography is recorded and edited on 2" highband Ampex videotape recorders before being transferred to the 3/4" Sony "U-Matic" system for ease in distribution and utilization.

Obviously, the Educational Network can be—and will be—used by the company to enhance its flow of information to the field force and to the bottler body. All Pepsi district managers will be equipped, in the very near future, with video cassette players which will be used immediately to demonstrate to bottlers how the system works. On a continuing basis, they will be instruments to convey information, programs, and strategy implementing all phases of Pepsi-Cola Company's marketing objectives. □

Bell System Fits Material to Media in 17-Part Training Course

Newly appointed Business Office Supervisors of the Bell System companies are now taking part in a training course designed to define the requirements of the job and to outline the activities supervisors are expected to perform.

During the past few years the need for such a course has brought increasingly urgent requests from various operating companies to American Telephone & Telegraph Company's headquarters in New York, and in 1970 the Training Staff of A.T.&T.'s Commercial Division undertook to formulate an extensive training program to meet the needs.

Robert L. Windle, A.T.&T. Commercial Training Supervisor, was assigned to produce the program, working with training development staffs of New England Telephone and Illinois Bell, both of which companies were actively developing supervisory training at that time.

In planning the course, Windle and his task force surveyed the problems encountered by Business Office Supervisors throughout the system, delineating where breakdowns of efficiency oc-

cur and "where the good and the bad things happen."

Twenty-five categories of job requirements were established in the system-wide research, which were finally designated to be covered in 17 training segments.

Windle and the training writers determined that self-instruction with the trainees taking an active part in their own training was the preferred method to adopt, and instead of choosing a set medium for the entire course and adapting the material to this medium, several different kinds of media are

One of the many concepts covered in the course is the necessity for managers to compare performance to established standards.

used, each selected to fit the material. Where a motion picture could do the job best, and sometimes where previously produced motion picture material existed, motion pictures were used. In many cases it was determined that nothing could be more satisfactory than an inexpensive audio tape. In all cases, the individual to be trained was to be actively involved throughout the course with stop-and-go audio-visuals and with especially prepared workbooks for each segment.

Gotham Film Productions, of New York, was selected to produce the audio-visual segments of the program, most of which were composed of newly prepared material, but some of which consisted, in part, of videotapes developed by the New England and Illinois companies.

The common denominator of the entire program is based on the theme of what management is all about and how it should be properly implemented. The various segments consist of two motion pictures on operant management and the role of management; three video tapes on interviewing, job enrichment and "how to stage a 'sit-in'"; two filmstrips on the reasons for "sit-ins" (on-the-job supervision of business office personnel) and on problem solving; and six audio tapes on specific job requirements such as speedwriting, evaluation and follow-up of customer contacts, handling service rep's questions, backing up the service rep, and planning a group meeting.

The Business Office Supervisor Training Program was first introduced last September. It is now in use by the Bell System companies, and a very positive reaction has been indicated. □

Bucyrus-Erie Training Films

The Polycom Corporation, Madison, Wis., is producing a series of training program for Bucyrus-Erie Company. The series is expected to be especially beneficial in remote areas where personnel turn-over rates are high. Programs will be made available to Bucyrus-Erie customers for on-site training.

New Syndicated Films:

"Ground for Concern" is a live-coverage on-the-job tragedy about a young construction worker who is buried alive. While aimed at the sewer and watermain industry, the film is an indispensable fail-safe reminder for anyone involved in excavation projects. Who produced 31,000 strip shows in 6 days?

Just who you might suspect... Color by DeLuxe.

But what you may not believe is the fact that within that mini-week not only did we convert the customer's transparencies into 31,000 film strips—we also put them in individual plastic sleeves and delivered them to his headquarters in the Mid-West.

That's probably a record. But when you're as busy busting deadlines as DeLuxe, yesterday's achievements soon become today's routine.

Which helps explain why the growth of our service to the Industrial, Educational and Medical markets is beginning to rival our growing dominance of motion pictures and TV.

So when you think of Color by DeLuxe, think of a complete communications lab. A lab that does everything from 8 to 70 MM film processing, video tape transfers, film strips, opticals, sound, developing and printing to engineering, cart-ridding and warehousing *world-wide*.

Why not let us improve your image?

Audio-Visual Communications Center Will Cost \$2 Million

What is said to be the most advanced audio-visual communications center in the U.S., with seating for 450 and facilities for multi-screen slide and film presentations, CCTV, audio-video recording and a unique audience response system is under construction in Kansas City at a cost of \$2 million. It forms part of Crown Center, a new 85-acre "city within a city" being developed close to the downtown area by Hallmark Cards, Inc.

The 35,000-square-foot, two-level communications center, to be known as The Multimedia Forum, will open this fall. It will be available to all types of organizations for convention meetings, workshops, conferences, educational seminars, trade shows, concerts or theatrical performances.

The Multimedia Forum's second level will have four seminar studios for groups ranging from six to thirty-five people. These rooms, each equipped with closed-circuit TV and elaborate slide- and film-projection fa-

cilities, can be used both as conference suites and as sound or TV studios.

The largest studio is fitted with a special electronic audience-response system. This enables participants at a meeting to respond to questions presented by a discussion leader by using a three button control attached to each seat. The responses are flashed automatically on the discussion leader's podium. This system can also be used for group testing and opinion expression.

A full staff of producers, artists, cinematographers, writers, photographers and designers will be available to organizations wishing to hire professional help for conference presentations or other audio-visual programs.

Layout, design and furnishings for The Multimedia Forum are under the direction of Herb Rosenthal & Associates of Los Angeles. Hubert Wilke, Inc. of California is responsible for design and installation of all communications system.

A-V Product Sales Triple in Ten Years

Spending for audiovisual media has more than tripled in the past ten years, according to *Hope Reports AV-USA 1972*, which has just been released.

Product sales in 1972 amounted to \$1.4 billion, up from 1962 sales of \$432 million. In that period of time software sales went from \$337 million to over \$887 million for a 163% gain. Equipment sales shot up from \$95 million to almost \$544 million, a phenomenal increase of 472%.

Leading medium continued to be the motion picture which accounted for 53% of total AV sales (including films, projectors, cameras and related equipment) or \$752 million, up from \$685 million in 1970, when it had 52% of the market. The 1971 gain over 1970 was 10%.

Next medium was that of the television/videotape recorder (equipment plus magnetic tape) with sales of \$116 million, or 8% of the total, compared to 1970 sales of \$121 million or 9% of the total AV sales. That was a decline of 4%.

Third medium in dollar sales was

LUXOR's open-and-shut case for videocassettes

LUXOR's Videocassette Console keeps your videocassette recorder/playback and monitor together for convenient operation, and protects them by lock and key.

No. 701-VCC console is attractive, functional, and efficient. Ideal for training departments, classrooms, offices, and conference rooms. Can be ordered with attractive pedestal base or with caster-mounted, lockable equipment storage base.

Designed with LUXOR's traditional quality engineering, including burnished aluminum doors with sturdy lock, charcoal-finished steel cabinet with walnut woodgrain.

hat of the filmstrip, only slightly behind the electronic medium, with 1971 sales of \$110.6 million. This was 18% better than the 1970 sales of \$93.8 million.

More Video Tape Announcements

MCA Discovision, Inc., which demonstrated its optically-read disc system late last year, announced recent improvements. One is a device which automatically maintains the height servo to maintain the read optics at the appropriate reading height without the expense of a complex height servo system.

Another advance is a precision replication technique which permits production of more precisely replicated records, resulting in less track distortion and less time base or synchronization error and jitter. In addition, MCA has developed processing and encoding formats which they believe will give as much as double the playing time for a given amount of information track storage space. MCA, which is the parent company of Universal Pictures, plans to market a player/changer unit for under \$500 and 12-inch video disc albums for from \$1.99 to \$9.95 per album.

A Discovision demonstration tour in major cities is planned for late 1973.

RCA Corporation displayed a production design of its Selectavision color video recorder/player at the National Association of Broadcasters in Washington, March 25.

Engineering features of the tape system as shown at NAB include in-cartridge scanning designed to provide superior tape control, enhanced performance and the ability to operate with existing TV receivers without modification. The system also has a prerecorded program stereo TV sound capacity.

The video tape cartridge, about the size of an average hard cover book, presently allows one hour of recording and playback.
